Emotional Computer:

Harnessing Artificial Emotional Intelligence for Improved Human-Computer Interactions Kumar, Nitendra, Pal, Surya Kant, Agarwal, Priyanka, Rosak-Szyrocka, Joanna, Jain, Vishal, 2024-06-06 Industry 5.0 is poised to redefine the collaboration between humans and machines marking a crucial moment in technological evolution. However, as we stand at the threshold of this transformative era, a critical challenge emerges: the integration of emotional intelligence into the industrial landscape. Organizations grapple with the urgent need to understand, strategize, and ethically deploy artificial emotional intelligence (AEI) in Industry 5.0. This pivotal juncture calls for a comprehensive resource that explores the theoretical foundations but offers practical insights into the applications, challenges, and responsible deployment of AEI. The absence of a cohesive guide addressing the intricacies of AEI in Industry 5.0 leaves a void in academic scholarship. Organizations, researchers, and policymakers lack a singular authoritative source to navigate the complexities of emotional intelligence integration impacting Industry 5.0 strategies, sustainability plans, and customer services. The challenge lies in managing the delicate balance between human and machine collaboration while ensuring ethical considerations are at the forefront of AI deployment. As the demand for emotional intelligence in the industrial landscape intensifies, the need for a unifying resource becomes increasingly apparent.

Emotion recognition using brain-computer interfaces and advanced artificial intelligence Yizhang Jiang, Maozhen Li, Pengjiang William Qian, Yaoru Sun, 2023-02-17 **Artificial Intelligence Applications for Brain-Computer Interfaces** Abdulhamit Subasi, Saeed Mian Qaisar, Akash Kumar Bhoi, Parvathaneni Naga Srinivasu, 2025-01-10 Artificial Intelligence Applications for Brain Computer Interfaces focuses on the advancements, challenges, and prospects of future technologies involving noninvasive brain computer interfaces (BCIs). It includes the processing and analysis of multimodal signals, integrated computation, acquisition devices, and implantable neuro techniques. This book not only provides cross-disciplinary research in BCI but also presents divergent applications on telerehabilitation, emotion recognition, neuro rehabilitation, cognitive workload assessments, and ambient assisted living solutions. In 15 chapters, this book describes how BCIs connect the brain with external devices like computers and electronic gadgets. It analyzes the neural signals from the brain to obtain insights from the brain patterns using multiple noninvasive wearable sensors. It gives insight into how sensor outcomes are processed through machine intelligent models to draw inferences. Each chapter starts with the importance, problem statement, and motivation. A description of the proposed methodology is provided, and related works are also presented. Each chapter can be read independently, and therefore the book is a valuable resource for researchers, health professionals, postgraduate students, postdoc researchers, and academicians in the fields of BCI, prosthesis, computer vision, and mental state estimation, and all those who wish to broaden their knowledge in the allied field. Focuses on the advancements, challenges, and prospects for future technologies over noninvasive brain computer interfaces (BCIs) including the processing and analysis of multimodal signals integrated

Affect and Emotion in Human-Computer Interaction Christian Peter,Russell Beale,2008-08-25 Affect and emotion play an important role in our everyday lives They are present whatever we do wherever we are and wherever we go without us being aware of them for much of the time When it comes to interaction be it with humans technology or humans via technology we suddenly become more aware of emotion either by seeing the other s emotional expression or by not getting an emotional response while anticipating one Given this it seems only sensible to explore affect and emotion in human computer interaction to investigate the underlying principles to study the role they play to develop methods to quantify them and to finally build applications that make use of them This is the research field for which over ten years ago Rosalind Picard coined the phrase affective computing The present book provides an account of the latest work on a variety of aspects related to affect and emotion in human technology interaction It covers theoretical issues user experience and design aspects as well as sensing issues and reports on a number of affective applications that have been developed in recent years **Emotion** Dylan Evans,2002 From Darwin to Star Trek Evans offers a lively look at the science of emotions and finds that whether we live in the shadow of Times Square or in the depths of the rain forest all humans feel disgust joy surprise anger fear and
