**Relationships, and Health** Carol D. Ryff Professor of Psychology University of Wisconsin-Madison,Burton Singer Office of Population Research Princeton University,2001-05-03 A growing literature in humans and animals documents linkages between social integration and affiliative relationships and a variety of health and disease outcomes including mortality The actual mechanisms through which these efforts occur are however not well understood Emotion likely plays a central role in mediating connections between relational experiences underlying neurobiological processes and health outcomes Many prior studies have focused on the size and proximity of social networks thereby neglecting their emotional features When studied emotion in social relationships has also been heavily weighted on the side of negative and conflicting interactions thus giving minimal attention to the possible protective benefits of enduring love nurturing and affection This volume brings together for the first time these differing lines of inquiry to advance understanding of how emotion in significant social relationships influences health The collection integrates knowledge from those with expertise in mapping the nature of emotional experience in human relations with those who are linking social ties to health outcomes and those who explicate underlying neurobiological mechanisms A main message of the book is that full explication of how emotion social relationships and health are woven together demands multidisciplinary inquiry To this end the volume brings together leading experts from fields of affective science clinical and social psychology epidemiology psychiatry psychoneuroimmunology psychoneuroendocrinology and health to promote the above synthesis Some address how to formulate observe and evaluate social interactions in clinical laboratory or daily life contexts Others link emotional experience in significant social relationships to health outcomes or intervening biological parameters Still others manipulate social environments or

exposure to health challenge to assess impact on respiratory infections and immune function Collectively each contributes different pieces to the larger puzzle that connects emotion in social relationships to health Recurrent themes include the importance of attending to 1 both positive and negative emotional experience in significant social relationships and how they influence underlying mechanisms 2 cumulative emotional experience namely the repeated chronic nature of socioemotional experience both positive and negative 3 gender differences in how emotion in social relationships is experienced and how it effects underlying mechanisms involved in health outcomes and 4 the need for multiple methodologies to advance the emotion social relationships and health agenda

**Emotion, Social Relationships, and Health** Carol D. Ryff,Burton H. Singer,2001-05-03 This volume brings together for the first time inquiries into the size and proximity of social networks and emotion in social relationships to advance understanding of how emotion in significant social relationships influences health The collection integrates knowledge from those with expertise in mapping the nature of emotional experience in human relations with those who are linking social ties to health outcomes and those who explicate underlying neurobiological mechanisms The book puts forth the idea that full explication of how emotion social relationships and health are woven together demands multidisciplinary inquiry and brings together leading experts from fields of affective science clinical and social psychology epidemiology psychiatry psychoneuroimmunology psychoneuroendocrinology and health to promote the above synthesis
