**Evolutionary Multi-Task Optimization** Liang Feng,Abhishek Gupta,Kay Chen Tan,Yew Soon Ong,2023-03-29 A remarkable facet of the human brain is its ability to manage multiple tasks with apparent simultaneity Knowledge learned from one task can then be used to enhance problem solving in other related tasks In machine learning the idea of leveraging relevant information across related tasks as inductive biases to enhance learning performance has attracted significant interest In contrast attempts to emulate the human brain s ability to generalize in optimization particularly in population based evolutionary algorithms have received little attention to date Recently a novel evolutionary search paradigm Evolutionary Multi Task EMT optimization has been proposed in the realm of

evolutionary computation In contrast to traditional evolutionary searches which solve a single task in a single run evolutionary multi tasking algorithm conducts searches concurrently on multiple search spaces corresponding to different tasks or optimization problems each possessing a unique function landscape By exploiting the latent synergies among distinct problems the superior search performance of EMT optimization in terms of solution quality and convergence speed has been demonstrated in a variety of continuous discrete and hybrid mixture of continuous and discrete tasks This book discusses the foundations and methodologies of developing evolutionary multi tasking algorithms for complex optimization including in domains characterized by factors such as multiple objectives of interest high dimensional search spaces and NP hardness
