William Tedder, Frederick G. Pohland, 2007-05-08 Several long term trends in technology evolution have become apparent since these symposia began in 1989. Earlier presenters more frequently discussed treatment methods involving harsh and extensive human intervention. As the symposia have continued, the number of presentations describing extremely harsh and expensive treatment technologies have gradually been supplanted by more subtle and gentler methods. Such methods include subsurface engineered barriers, phytoremediation, and bioremediation. Nineteen manuscripts were selected for inclusion in this volume based upon peer review, scientific merit, the editors' perceptions of lasting value or innovative features, and the general applicability of either the technology itself or the scientific methods and scholarly details provided by the authors. General topics include soil treatment, groundwater treatment, and radioactive waste treatment. **Emerging Technologies in Hazardous Waste Management V**, 1995 **Emerging Technologies in Hazardous Waste Management 8** D. Pohland, American Chemical Society. Division of Industrial and Engineering Chemistry, American Chemical Society. Division of Industrial and Engineering Chemistry. Winter Symposium, 1990. This new volume describes developing technologies for treating and managing wastewaters and solid residues such as soils and incinerator ashes that are contaminated. It includes chapters on such diverse topics as municipal solid wastes, water purification by radiation, the isolation of organic species and inorganic radionuclides, and solvent recycling. Several chapters cover radiolysis chemistry in dilute aqueous media, solar treatment, chemical separations, the biological and chemical treatment of soils and sludges, and solids immobilization. This volume is a useful introduction to hazardous waste

treatment for the novice as well as a valuable reference for the technical expert

**Emerging Technologies in Hazardous Waste Management IV** Daniel William Tedder, American Chemical Society. Division of Industrial and Engineering Chemistry, 1994

The 18 papers were selected from over 200 presented at the symposium Atlanta Georgia September 1992 to reflect the most important or promising directions in hazardous waste management and to avoid duplicating information in earlier volumes of the series

Among the remedial technologies described for soils and sediments are electrokinetic and the mobilization of specific ions

Other methods include the crystallization of mechanical pulp mill effluents and the removal of gasoline vapors from air streams by biofiltration

Radioactive and mixed waste are considered in studies of the Hanford waste site in Washington and reports of laboratory scale studies

**Emerging Technologies in Hazardous Waste Management III** Daniel William Tedder, 1993

Based on a symposium held in Atlanta Georgia in October 1991 this volume is both an introduction to hazardous waste treatment for the novice and a reference for the technical expert

Specialists in emerging technologies for treating and managing gaseous liquid and solid wastes contribute 22 chapters arranged within five sections

physical and chemical wastewater treatment biological treatment soil remediation and treatment treatment of volatile compounds and selected mixed waste treatment applications

**Emerging Technologies in Hazardous Waste Management V**, 1995

**Emerging Technologies in Hazardous Waste Management II** Daniel William Tedder, 1991

In this sequel volume to ACS Symposium Series No 422 *Emerging Technologies in Hazardous Waste Management* the editors expand their coverage of the subject with contributions on air treatment as well as a greater examination of computer applications and modeling

Twenty one chapters are divided into four sections covering thermal treatment and abiotic emissions control water management biological treatment and solid waste management

Of special interest is a presentation on the use of internal radiant energy within a gas fired combustion chamber to maintain high combustion temperatures a technique that appears important for the thermal destruction of many chlorinated species
