**Sustainable Value Management-New Concepts and Contemporary Trends** Dariusz Zarzecki, Marek Jabłoński, 2020-12-29 Sustainable value management reveals a new space for studying business models The traditional approach is based on the assumption that the goal of any business is to make money All decisions regarding supply and production should be made to maximize profit The discrepancy in creating non economic value is sometimes the result of separating ownership from control over an enterprise Although shareholders are interested in maximizing profit management that actually makes decisions can also pursue other goals In addition to economic aspects the management intentions of modern managers are also influenced by factors arising from the organizational culture built co created within the organization and sometimes with the participation of external actors such as suppliers and customers The sources of the creation of social values will be the management intentions of top management often initiated by the adopted values and rules on the basis of which resources are bound within the structure of the business model The value of sustainability is based on the identification of those creative sources that relate to economic and social value Economic value is created through social value and vice versa This allows the complementarity of the value created to be mutually supportive The business model that integrates both of these values should be more resistant to crises than the one that is oriented only toward producing economic value Concurrent implementation of economic and social goals increases resilience and affects the success of modern business models This is due to the specificity of the business ecosystem that is built as part of the business model which in essence is based on the use of social factors to merge the business model into a complex ecosystem capable of producing value      **Semantic Services, Interoperability and Web Applications: Emerging Concepts** Sheth, Amit, 2011-06-30 This book offers suggestions solutions and recommendations for new and emerging research in Semantic Web technology focusing broadly on methods and techniques for making the Web more useful and meaningful Provided by publisher      *Emerging Concepts in Upper Extremity Trauma, An Issue of Orthopedic Clinics* Michael P. ## **New Concepts for Business and Humanity**

Mia den Haan, 2007-10-29 This book emphasizes that by

the year 2009 the impact of climate change will be noticed by all and that a possible global crisis may develop perhaps no later than 2025 It explains that since global warming is man made humanity has no choice but to adjust its lifestyle reduce its ecological footprint and also restore the ecology in order to avoid possible catastrophic climate change Companies will have to play an important role in resolving this situation and may need to review their direction if need be companies may have to take the lead and act without the support of their respective governments While organizations may in some cases already have taken a leading role there is not yet sufficient action taking place to combat climate change While the information in this book contains a brief overview of the possible events for the next twenty years it also holds the key which is needed to change human consciousness directly addressing the main aspects of human consciousness that are the cause of many planetary imbalances The author decided to publish this material which she received late 2004 because of a looming planetary crisis Some of the timelines predicted in the book are now beginning to emerge Many organizations can play a major role in making changes to support the environment and can in the end perhaps more so than governments create the solution to an enormous global problem Those in leading positions can be a step ahead It may be in their interest to do so to be competitive as part of a new ecologically more aware future There is a trend in business whereby people are proactively looking for solutions while there may be technical solutions available for some aspects of this emerging crisis innovation is required to implement solutions back into the production process and into society Within each person already resides a unique very creative and innovative part that may be of assistance Each person has access to this innovative part within which has answers and solutions to any situation in life This innate part is often able to express itself in people with very good creative ability or people with a special gift and is available to everyone who wishes to find it In this book an example is shown of how this creative and innovative part could become a resource for business This part is sometimes called the true self your authenticity or your own innate uniqueness For those who wish to explore this part a method which is briefly outlined in this book may be beneficial This unique method called exchange of awareness utilizes the persons self through a process that may be of assistance It includes an example of how to apply this method in personal relationships and in the workplace environment such as when staff members are not in alignment with a companys general objectives The true self or innate uniqueness knows what is required in any situation and may be of help by providing further insights More care and caring procedures are needed to be applied by humanity The book provides examples of care or lack thereof in the context of

both business and personal relationships It shows where care is often lacking in a business process such as sales It includes some sample conceptual ideas about implementation of care These care concepts which are a major issue are often absent in todays society and need to be implemented in any organizational structure such as a business hospital or educational facility to improve functionality and outflow Through implementation of care principles there may be an improvement in the outflow of people and the structures they take part in with benefits for all of life and society at large New Concepts in Banking S.S.
