Emerging Environmental Technologies Vishal Shah, 2008-07-30 In this day and age it is unfortunate that the economic prosperity and development leads to disruption of the dynamic balance of the environment The philosophy of sustainable development has been presented for a long period of time but it has not been able to bring about a substantial change in our society The transformation of this philosophy into a practical reality seems to be far away at least in the foreseeable future In my opinion the only way I see the revolution taking place is for us to incorporate sustainability in our daily living and to keep pushing for a sustainable society Meanwhile we also need scientists to work on technologies that would lead us to that goal at a faster pace Technologies that are completely environmentally friendly are needed urgently And if such technologies or ideas of one exists a platform is required that showcases such ideas to the scientific and non scientific audience Through this book I am happy to present the thoughts of seven different research groups whose work may lead us to the doorsteps of sustainable society As scientists most of us specialize in a sub topic that may be related to one of the three environmental components air land or water Over a period of time we become so engrossed with the sub discipline of our specialization that we only have glimpses of what is happening in other disciplines
