**Contemporary French Environmental Thought in the Post-COVID-19 Era** Keith Moser, 2022-04-07 Contemporary French Environmental Thought in the Post COVID 19 Era is focused on the fields of biosemiotics linguistics ecocriticism and environmental ethics Closely aligning with Sustainable Development Goal 13 1 Keith Moser s study aims to strengthen resilience to climate related hazards by drawing on ecological theories developed by French philosophers in conversation with biosemiotic principles Not only does the novel theoretical framework offered by biosemiotic interpretations of the universe and our place in it represent an indispensable conceptual tool for understanding the unprecedented medical challenges at the dawn of a new millennium but it also beckons us to think harder about the environmental crisis that

threatens the continued existence of all sentient beings who call the biosphere home This book also highlights the richness diversity and utility of the ecological theories developed by the French philosophers Michel Serres Edgar Morin Jacques Derrida Dominique Lestel and Michel Onfray in addition to how they engage with biosemiotic principles Taken together the book probes the scientific linguistic philosophical and ethical implications of biosemiotic theories in a post pandemic world from an environmental and medical perspective      Environmental Ethics Robin Attfield,2014-04-03 In this clear concise comprehensively revised and up to date introduction to environmental ethics Robin Attfield guides the student through the key issues and debates in this field in ways that will also be of interest to a wide range of scholars and researchers The book introduces environmental problems and environmental ethics and surveys theories of the sources of the problems Attfield also puts forward his own original contribution to the debates advocating biocentric consequentialism among theories of normative ethics and defending objectivism in meta ethics The possibilities of ethical consumerism and investment are discussed and the nature and basis of responsibilities for future generations in such areas as sustainable development are given detailed consideration Attfield adopts an inclusive cosmopolitan perspective in discussions of global ethics and citizenship and illustrates his argument with a discussion of global warming mitigation adaptation and global justice The revised edition features a new chapter on climate change new treatments of animal issues ecofeminism environmental aesthetics invasion biology and virtue ethics and new applications of the precautionary principle to fisheries genetic engineering and synthetic biology The glossary and bibliography have been updated to assist understanding of these themes The text uses a range of devices to aid understanding such as summaries of key issues and guides to further reading and relevant websites It has been written particularly with a view to the needs of students taking courses in environmental ethics and will be of interest to students and scholars of philosophy ethics geography religion and environmental studies      *Urban design: The ecological thinking - A compendium* Dimitra Babalis,2008      *I.S.C. Environmental Science for Class XII* Dr. Nirmal Kapoor,Goyal Brothers Prakashan,2015-12-01 Goyal Brothers Prakashan      **The International Yearbook of Environmental and Resource Economics 2000/2001** Tom Tietenberg,Henk Folmer,2000-05-25 There has been an explosion in the literature and research on environmental and resource economics in recent years This major annual publication provides a cutting edge survey of current research by the leading experts in the field      *Towards the Ecology of Human Communication* Marta Bogusławska-Tafelska,Anna Drogosz,2015-10-13 There is undoubtedly considerable intellectual and methodological progress evident in approaches to linguistics from systemic and formal methods to post Newtonian transpersonal non local models of meaning co creation built within contemporary language studies Indeed such changes are constant the 20th century product orientation of linguistic research is currently being complemented by ecolinguistic processes with the linearity of scientific perception and treatment being replaced by the dynamic and multispectral approach of ecological theory This book provides a richly detailed analysis of this profound shift within

contemporary language and communication research A particularly interesting facet of this volume is the proposal that the architecture of the human organism is transpersonally in constant relation with its immediate surroundings as well as with non local multilevel surroundings This connection is based not only on the cognitive connection of minds or neurocognitive contacts with the nervous and sensual systems of communicators but on the multidimensional relationship between the manifold communicative modalities living systems possess Human communication is embedded within a given local communicative situation as well within the global non local environment via the basic ontology of entanglement The human communicative process is always evolving as a result of the constant fluctuations of life processes Indeed the conclusions presented in this volume open up a new approach to present day linguistics that human language is an essential life process

*Defining the Urban* Deljana Iossifova, Christopher N.H Doll, Alexandros Gasparatos, 2017-10-06 What is urban How can it be described and contextualised How is it used in theory and practice Urban processes feature in key international policy and practice discourses They are at the core of research agendas across traditional academic disciplines and emerging interdisciplinary fields However the concept of the urban remains highly contested both as material reality and imaginary construct The urban remains imprecisely defined *Defining the Urban* is an indispensable guide for the urban transdisciplinary thinker and practitioner Parts I and II focus on how Academic Disciplines and Professional Practices respectively understand and engage with the urban Included among others are Architecture Ecology Governance and Sociology Part III Emerging Approaches outlines how elements from theory and practice combine to form transdisciplinary tools and perspectives Written by eminent experts in their respective fields *Defining the Urban* provides a stepping stone for the development of a common language a shared ontology in the disjointed fields of urban research and practice It is a comprehensive and accessible resource for anyone with an interest in understanding how urban scholars and practitioners can work together on this complex theme
