Ecology and Land Use in Upland Scotland Donald N. McVean, James Donaldson Lockie, 1969 *Ecology and Management of Atlantic Salmon* D. Mills, 1991-09-30 From reviews of the hardback edition No matter how experienced a salmon man the reader is I cannot believe he will study this extremely informative book without learning a great deal and gaining much enjoyment from doing so The biology and life of the salmon are all dealt with in a most interesting manner Highly recommended A book not to be read just once but often to be consulted This book is dedicated to Salar the Salmon and what a tribute it is to this unique fish Supporters of the Trust would be wise to purchase this book and to keep it on the shelf for future reference Atlantic Salmon Trust Progress Report Upland Habitats Alan F. Fielding, Paul F. Haworth, 2002-01-31 Upland Habitats presents a comprehensive illustrated guide to the habits wildlife and conservation of Britains last wilderness areas These include heather moors sheep walk deer forest blanket bogs montane and sub montane forests The book examines the unique characteristics of uplands and the ecological processes and historical events that have shaped them since the end of the last glaciaton Among the key conservation and management issues explored in are modern agricultural practices and economics habitat degradation through overgrazing commercial forest plantations the persecution of wildlife recreation in the uplands the funding of upland farming *The Cultured Landscape* Sheila Harvey, Ken Fieldhouse, 2005 A team of eminent practitioners and writers contribute to an assessment of the philosophy of landscape and collectively form a new approach to creative design *The Making of the Scottish Rural Landscape* David Turnock, 2016-12-05 This book looks at the evolution of rural settlement in Scotland from the Mesolithic period through to the improving movement of the 18th and 19th centuries The main emphasis is on changes in society and technology but the book also considers how the development of the physical landscape laid the foundation for such changes The author strikes a balance between general perspectives including relevant contextual materials such as the political structures and local studies with much emphasis on individual sites Lack of documentation prior to the 10th century places particular importance on the archaeological evidence but imaginative interpretation of this evidence has led to a major re evaluation Ideas emphasizing continuity of settlement and local adaptation are replacing older invasionist theories emphasizing Celtic war lords and broch building pirates **EPA-600/5**, 1974-02 *Decolonizing Nature* William Adams, Martin Mulligan, 2012-04-27 British imperialism was almost unparalleled in its historical and geographical reach leaving a legacy of entrenched social transformation in nations and cultures in every part of the globe Colonial annexation and government were based on an all encompassing system that integrated and controlled political economic social and ethnic relations and required a similar annexation and control of natural resources and nature itself Colonial ideologies were expressed not only in the progressive exploitation of nature but also in the emerging discourses of conservation At the start of the 21st century the conservation of nature is of undiminished importance in post colonial societies yet the legacy of colonial thinking endures

What should conservation look like today and what indeed whose ideas should it be based upon Decolonizing Nature explores the influence of the colonial legacy on contemporary conservation and on ideas about the relationships between people politics and nature in countries and cultures that were once part of the British Empire It locates the historical development of the theory and practice of conservation at both the periphery and the centre firmly within the context of this legacy and considers its significance today It highlights the present and future challenges to conservationists of contemporary global neo colonialism The contributors to this volume include both academics and conservation practitioners They provide wide ranging and insightful perspectives on the need for and practical ways to achieve new forms of informed ethical engagement between people and nature *Vegetation dynamics in grasslands, heathlands and mediterranean ligneous formations* P.

**Basic Biogeography** N.V. Pears,2014-06-06 First published in 1985 This is the second edition of a study looking at

ecology and biogeography with updated chapters including current research It starts with the study of plants to gain an understanding of the complexities of ecological relationships *Environment* Kenneth E. Hornback, W. Keith Warner, 1972 *The Politics of Environment* Malcolm Slessor, 2021-10-12 Originally published in 1972 and ahead of its time in many respects this book was the first to take a constructive approach to the problems facing the human race in the 20th Century It remains enduringly relevant today and discusses over population under employment atmospheric pollution exhaustion of global resources and geo politics It shows how all these issues are inter connected and therefore how conventional attempts to solve some of them merely exacerbate others It asserts that the solution rests in the evolution of a realistic form of politics which puts the community first **The Nature of the Cairngorms** Philip Shaw, Des B.A. Thompson, 2006-06-12 The Cairngorms area is arguably the most significant for nature conservation in the British Isles and contains its largest National Park In this book 35 authors drawing on published and unpublished sources present an up to date review of the area s natural features including plants animals habitats geology and landforms The review falls into three parts The first and largest part describes the area s rich diversity of nature with each chapter summarising recent research findings trends and conservation issues for a different landform habitat or species group The second part considers deer management recreation and projected climate change impacts Part three focuses on rare and threatened species and identifies areas and habitats rich in species for which the Cairngorms are nationally and internationally important The Life of David Lack Ted R. Anderson, 2013-06-01 The first biography of David Lack the father of evolutionary ecology and an acclaimed ornithologist *Gulls and Plovers* C.J. Barnard, D.B.A. Thompson, 2012-12-06 In the early years of this century a Scottish doctor speculated on the evolutionary origin of human tears It seemed to him that with the increase in brain size and cognitive powers of our early ancestors many events in the struggle for existence would be just too distressing to observe How comforting then for the mother distraught by the sight of her child being devoured by a lion to cloud her vision with a flood of tears Just so though if the good doctor had pondered further the following picture might have occurred to him comfortable in his speculative armchair and given him some pause for thought u \_ vii viii SERIES EDITOR S FOREWORD These stories do not of course get us very far in understanding the evolution of tears or anything else but they do remind us how far the study of behavioural adaptation has come this century This is in fact an exciting time for students of behaviour The last twenty years have seen a great advance in the theoretical armoury for tackling questions of behavioural evolution and adaptation and a parallel expansion in empirical studies particularly in the field The concepts of inclusive fitness and the evolutionarily stable strategy for example have helped to explain major features of social behaviour and have generated entirely new questions and predictions for the field worker to examine **Bird Habitats in Britain** R. J. Fuller, 2010-09-30 The book describes all the main habitat types the structure and composition of bird communities and reviews bird sites and their distribution throughout Britain Rob Fuller s book would not have been possible but for the nationwide cooperative

endeavour by amateur and professional ornithologists naturalists and conservationists which led to the British Trust for Ornithology's Register of Ornithological Sites sponsored by the Nature Conservancy Council. Hitherto few books have dealt primarily with bird habitats but the subject is of urgent importance now that exploitation of the environment has left few corners of Britain untouched or unthreatened. Even so the book is much more than timely it also extends the reader's interest to an area of bird study that has perhaps been too little considered. The text is supported by more than 100 diagrams and maps and over 50 photographs. In addition there are 53 superbly evocative drawings by Donald Watson. For the birdwatcher and all involved with conservation this is stimulating reading and an essential reference.

**Wellbeing and Self-Transformation in Natural Landscapes** Rebecca Crowther, 2018-09-20. This book explores how natural landscapes are linked to positive mental wellbeing. While natural landscapes have long been represented and portrayed as transformative, the link to mental wellbeing is an area that researchers are still aiming to comprehend. Accompanying five groups of people to rural Scotland, the author considers individual, external and group motivations for journeying from urban environments, examining in what ways these excursions are personally and socially transformative. Far more than traversing mere physical boundaries, this book illustrates the new challenges, experiences, territories and cultures provided by these excursions, firmly anchored in the Scottish countryside. In doing so, the author questions the extent to which people's own narratives link to the perception that the outdoors are positively transformative and what indeed does have the power to influence transformation. Grounded in extensive qualitative research, this contemplative and ethnographic book will be of interest and value to students and scholars of the outdoors and its connection to wellbeing.

**Planning and Ecology** R. D. Roberts, T. M. Roberts, 2013-11-11. Professional planning is commonly defined as an activity which is concerned with the rational allocation or exploitation of resources for man's maximum short and long term benefit. The science of ecology is the study of the basic components of these resources: soil, water, air, etc. and their inter-relationships with living organisms. Planning and ecology therefore have many common interests and as such have long been associated in resource management. This association was, for example, reflected as early as the 19th century in the writings of Patrick Geddes, the progenitor of modern town planning, whose training as a biologist led him to re-interpret the phenomena of urbanization in ecological terms. Geddes (1886). Since the time of Geddes, the place of ecology has declined in planning circles as other professions and considerations, initially public health and engineering, latterly economic and sociological, have become more central. The reasons for this shifting emphasis are three-fold. First, they reflect changing social attitudes and aspirations in the post-war period. Secondly, many other professions and persuasions, agriculturalists, foresters, industrialists, etc. became organized as pressure groups and helped shape public attitudes and governmental actions. Thirdly, and by far the most important reason, is the prevalence of misconceptions about ecology. Too many people, perhaps misled by the debate surrounding the environmental movement, equate ecology with conservation. In reality, conservation is but one component part of ecology.

Agricultural and Pastoral Landscapes in Pre-Industrial Society Fèlix Retamero, Inge Schjellerup, Althea Davies, 2014-12-01

Through a series of case studies this third volume in the Earth series deals with the technological constraints and innovations that enabled societies to survive and thrive across a range of environmental conditions. The contributions are structured into three sections to draw out particular commonalities and contrasts in the choices made by pre-industrial communities in the construction of varied landscapes and cultural heritage. Landnam from the Old Norse for taking of land deals with colonization including the drivers and processes through which colonizers developed an understanding of the productive potential and limitations of their new lands. Fields and field systems: Field walls are a distinctive and apparently timeless characteristic of many pre-industrial farming landscapes but they present many challenges to their study such as the effects of plowing abandonment and land use change and of urban development in fertile lowland zones which may eradicate, reduce or conceal past systems of land use and division. The importance of indirect and proxy evidence is illustrated and the value of interdisciplinary and modeling approaches emphasized. Agro-pastoralism focuses on the complex time-space adaptations devised for managing cultivation and livestock production, particularly the need to prevent stock incursions into arable fields during the growing season whilst making effective use of seasonal grazing resources. The contributions focus on mountainous areas where temporary migrations in the form of transhumance provided access to a diversity of resources based around seasonal constraints on their availability and productivity.
