Tieben, 2012-07-01 Bert Tieben is very well read in the history of economic thought and provides an overview of one of the basic concepts of economics that is unrivalled both in its scope and in its thoughtful and detailed discussion of the various currents and schools It goes right to the heart of economic theory and asks some pertinent questions about the limits and the future of economic theorizing That is I think what sets it apart from many other studies in the history of economic thought it is history with an eye to the future and it does all this without making any demands on the mathematical skills of the reader This book should therefore appeal to everybody who is interested in the methodology of economics and in exploring the

boundaries of economic analysis Hans Visser VU University Amsterdam The Netherlands This book deals with one of the most puzzling concepts in economic science that of economic equilibrium In modern economics equilibrium is considered a key assumption but its role is contested by economists both from within the mainstream and from rival schools of thought What explains the contradictory assessments of the equilibrium concept in economics Do economists belonging to different traditions disagree about the definition of equilibrium or do they adopt different rules for assessing scientific status In this unique and exhaustive study Bert Tieben answers these questions by investigating the history of equilibrium economics from 1700 to the present day He concludes that ideology strongly coloured the development of this branch of theory helping to explain the vehemence of the debates surrounding the concept He also argues that scientific progress in economics may indeed be fostered by such opposition and contention and calls for cross fertilization and stronger cooperation between the different schools of thought This resourceful book will appeal to post graduate students and scholars in the history of economic thought and economic methodology Both neoclassical and heterodox economists most notably Austrian post Keynesian and institutional economists will also find much to interest them Economic Reason and Political Reason Jean

Mercier Ythier,2022-12-01 The public space of democracies is constructed in a context that is marked by the digital transformation of the economy and society This construction is carried out primarily through deliberation Deliberation informs and guides both individual and collective action To shed light on the concept of deliberation it is important to consider the rationality of choice but what type of rationality is this References to economic reason are at once widespread crucial and controversial This book therefore deals with arguments used by individuals based on the notions of preferential choice and rational behavior and also criticizes them These arguments are examined in the context of the major themes of public debate that help to construct the contemporary public space populism social insurance social responsibility and environmental issues Economic Reason and Political Reason underlines the importance of the pragmatist shift of the 2000s and revisits through the lens of this new approach the great utilitarian and Rawlsian normative constructs that dominated normative political economics at the end of the 20th century Alternative approaches based on the concept of deliberative democracy are proposed and discussed **Causes and Consequences of Democratization** Anastassia V.

contributes to a better understanding of democratization world wide The book will be of key interest to scholars and students of democratization sub national regimes East European politics comparative politics post communism and international relations

Crespo,2012-09-25 The aim of the book is to argue for the restoration of theoretical and practical reason to economics It presents Nancy Cartwright and Amartya Sen s ideas as cases of this restoration and sees Aristotle as an influence on their thought It looks at how we can use these ideas to develop a valuable understanding of practical reason for solving concrete problems in science and society Cartwright s capacities are real causes of events Sen s capabilities are the human person s freedoms or possibilities They relate these concepts to Aristotelian concepts This suggests that these concepts can be combined Sen s capabilities are Cartwright s capacities in the human realm capabilities are real causes of events in economic life Institutions allow us to deliberate on and guide our decisions about capabilities through the use of practical reason Institutions thus embody practical reason and infuse certain predictability into economic action The book presents a case study the UNDP s HDI

**The Economic World View** Maki,2001-07-23 The beliefs of economists are not solely determined by empirical evidence in direct relation to the theories and models they hold Economists hold ontological presuppositions fundamental ideas about the nature of being which direct their thinking about economic behaviour In this volume leading philosophers and economists examine these hidden presuppositions searching for a world view of economics What properties are attributed to human individuals in economic theories and which are excluded Does economic man exist Do markets have an essence Do macroeconomic aggregates exist Is the economy a mechanism the functioning of which is governed by a limited set of distinct causes What are the methodological implications of different ontological starting points This collection which establishes economic ontology as a coordinated field of study will be of great value to economists and philosophers of social sciences

Heer,2017-12-02 Kingsley Davis 1908 1997 was one of the pioneers in social

demography and was particularly identified with the theory of the demographic transition. This holds that the process of industrialization first causes mortality to decline leading to a substantial rate of population growth and only later causes fertility to fall leading eventually to the cessation of population growth. Kingsley Davis is especially remembered for his arresting and forceful critique of family planning programs intended to achieve zero population growth. Before he devoted his major attention to social demography, Davis had distinguished himself through influential articles on the structure of family and kinship including the topics of jealousy and sexual property, the sociology of prostitution and illegitimacy. He had an early interest in structural functional analysis which resulted in his famous and controversial article on stratification co-authored with Wilbert Moore and his equally famous presidential address to the American Sociological Association in 1959. David Heer's biography of Kingsley Davis is based on material contained in the Kingsley Davis Archive at the Hoover Institution Library at Stanford University, the Kingsley Davis graduate file at Harvard University, the interview of Kingsley Davis by Jean van der Tak in *Demographic Destinies* 1990 and David Heer's personal relationship with Kingsley Davis. The book also contains thirty of the most important writings by Kingsley Davis. These were chosen in part for the number of citations received in the Cumulative Social Science Citation Index and in part to ensure that readers would be able to assess the continuity of Kingsley Davis's ideas at all stages of his career.
