Economic Process An Instantaneous Non Newtonian Picture:

The Economic Process Carmine Gorga, 2010 This book transports the reader from the world of mainstream economics in which the object of observation is The Market exchange to a world in which the object of observation is the economic process Both producer and consumer must respectively be legitimate owners of real wealth and monetary wealth

Concordian Economics, Vol. 1 Carmine Gorga, 2023-12-11 This is the first part of a two volume set on Concordian economics a new paradigm whose core completes the Aristotelian Aquinian project of economic justice The book delves into the history of economics and presents Concordian economics as a response to the concerns and shortcomings of mainstream economics Demand side economics is represented in the process of consumption the expenditure of monetary wealth to acquire real wealth and financial wealth of a different nature In contrast supply side economics is represented in the production process the process of producing real wealth e g tables chairs and foodstuffs Institutionalists will also welcome this book because it ties the world of real wealth to that of monetary wealth through the process of distributing the value of ownership of both monetary and real wealth as they are created The book begins with an introduction to Concordian economics followed by a discussion of how to restore relevance to the field of economic studies It also presents a revision of the Keynesian model designed to gradually address the major social economic and political causes of discord Moreover the author warns against the separation of economics from the world of physical things as well as the world of legal and moral issues Following a discussion on the measurement of real wealth econometrics is introduced in accordance with the categories of Concordian economics Lastly the book develops a theory of economic justice by defining a set of economic rights and responsibilities that guide economic behavior and policy This book appeals to scholars and students of economics and related fields as well as anyone interested in reintegrating economics into the social context *Concordian Economics, Vol. 2* Carmine Gorga, 2024-04-12 This is the second volume of a two part series on Concordian economics an innovative paradigm that builds upon the Aristotelian Aquinian tradition of economic justice Having introduced Concordian economics in the first volume as a compelling research paradigm that addresses the limitations of mainstream economics this second installment takes the exploration further by examining its real world applications in four policy areas With a focus on industrial organization labor markets monetary and fiscal policy the author advocates for a transformative approach to economic rights and responsibilities By promoting a moral economy this book offers a substitute to the Pac Man approach to industrial organization The book challenges traditional notions by discussing the ownership rights concerning larger corporations and offering visionary solutions in the steps of Louis O Kelso empowering workers and employees to participate in the ownership of robots and artificial intelligence The Fed has given a nod of approval to the creation of a new Concordian monetary system Following the advice of eight Nobel Laureates in economics the proposed fiscal reforms emphasize taxing only the value of land and natural resources ushering in a society where the use of our natural resources and machines

serves the common good economic freedom thrives and forced income redistribution becomes obsolete This book illustrates a vivid vision of a world founded on universal economic rights and responsibilities offering fresh perspectives on a more just and sustainable future It appeals to scholars and students of economics and related fields as well as anyone interested in a free but just economic system

Intangibles in the Big Picture Gary Zatzman, Rafiqul Islam, 2009 The so called TINA syndrome provides the fundament the actual rock on which the political economic military and other elites and establishments of the Anglo American world and European bloc have built their church Inscribed over its entrance stands the motto there is no god but monopoly and maximum is his profit On this basis continuous attacks on the very concept of intangibles are launched most prominently against time consciousness Especially singled out is time consciousness based on appreciating and or prioritising the long term over the short term as well as placing the interests of the social collective over the interests of any individual member of the collective In this book it is argued that Humanity has been on the wrong track since Sir Isaac Newton published his Principia Mathematica at the end of the 17th century and that the scientific research enterprise developed since then has taken the world on a merry chase to nowhere Without exception the assaults on time consciousness and on cognition of what happens in and through the passage of time take the form of a denial of the principle of Nature as the Mother of all wealth The denial of this principle has always encountered resistance Some resist by breaking the attacks down and responding to selected cases For example the contributors to the book Underdevelopment and Social Movements in Atlantic Canada Toronto 1979 following precisely this tact act according to the principle that the movement is everything This places the struggle of the people for livelihood where it belongs viz at the centre of economic theory and practice However these writers version of this approach is silent about long term or final aims Their work actually prioritises t right now over longer term views of the role of time in social historical processes People s deepest desires to see Justice prevail and Injustice sent packing are generally aroused positively by their apparent stand on the side of labour against capital a great deal of hope might well be vested in these stands Has this hope however been misplaced Analysis of these authors collective work from 1979 as the Soviet Union began its final slide to oblivion by invading Afghanistan and its source in theories of regional underdevelopment formulated at the Cold War s height in the late 1950s suggests this may be the case Especially disturbing is the outlook underlying that theory and specifically its extreme pragmatism and welter of contradictions and inconsistencies These disclose a position entirely at odds with the proclaimed mission to establish the truth of matters under investigation In order to maintain a position in what they see as the mainstream today some of these

writers have taken matters further adapting to fit the cut of current discourse in the early 2000s some of the concerns raised in the earlier work En route however they make a major concession to the disinformation of the Canadian fisheries department that there are too many fishermen chasing too few fish Disguising the concession as an appeal for ecological sanity in the face of a pending environmental crisis of raw material food supplies during a period of still excessive capitalization in the coastal fishing industry those putting forward this argument decline to challenge the claims by the government and the largest fish processors that the problem at bottom is a shortage of raw material a defect in Nature As however the problem is actually one of how Humanity has arranged its affairs when it comes to extremely fundamental matters like food gathering this concession no less than any of the other more direct attacks on time consciousness and on cognition as a source of reliable information forms part of a far more general and sweeping assault on the very concept of human agency This assault challenges the fundamental notion that no human social problem is without some human social solution The fact of the matter is that the essence of human social agency lies on the path of pursuing knowledge Whosoever would increase knowledge is bound to disturb the status quo but even so a person must increase his knowledge of the truth

Time in Contemporary Intellectual Thought P.J.N. Baert,1999-12-09 In this book fifteen authors from a wide spectrum of disciplines ranging from the natural sciences to the arts offer assessments of the way time enters their work the definition and uses of time that have proved most productive or problematic and the lessons their subjects can offer for our understanding of time beyond the classroom and laboratory walls The authors have tried without sacrificing analytical rigour to make their contribution accessible to a cross disciplinary readership Each chapter reviews time s past and present application in its respective field considers the practical and logical problems that remain and assesses the methods researchers are using to escape or resolve them Particular attention is paid to ways in which the technical treatment of time for problem solving and model building around specific phenomena call on or clash with our intuitive perceptions of what time is and does The spans of time considered range from the fractions of seconds it takes unstable particles to disintegrate to the millions of years required for one species to give way to another Like all central conceptual words time is understood on several levels By inviting input from a broad range of disciplines the book aims to provide a fuller understanding of those levels and of the common ground that lurks at their base Much agreement emerges not only on the nature of the problems time presents to modern intellectual thought but also on the clues that recent discoveries may offer towards possible solutions
