Contamination of farmland soils by trace elements (TEs) has become an international issue concerning food safety and human health risks. In the present research, the concentrations of TEs including cadmium (Cd), cobalt (Co), chromium (Cr), copper (Cu), manganese (Mn), nickel (Ni), lead (Pb), zinc (Zn) and iron (Fe) in soils of 16 farmlands were determined in Gonabad, Iran. In addition, the human health risks due to exposure to the TEs from the soils were assessed. Moreover, the soil contamination likelihood was evaluated based on various contamination indices including contamination factor (CF), enrichment factor (EF), geo-accumulation index (I<sub>geo</sub>), and pollution load index (PLI) calculations. The soil mean concentrations for Cd, Co, Cr, Cu, Mn, Ni, Pb, Zn and Fe ranges as 0.102, 6.968, 22.550, 29.263, 475.281, 34.234, 13.617, 54.482 and 19,683.6 mg/kg in farmland soils. The mean concentrations of the TEs decreased in the order of Fe > Mn > Zn > Ni > Cu > Cr > Pb > Co > As > Cd. Levels of all metals in this study were within the FAO/WHO and Iranian soil standards. The HQ values from investigated elements for adults and children in the studied farms were less than the limit of 1, indicating no health risks for the studied subpopulations. The results of the present research indicated no significant carcinogenic health hazards for both adults and children through ingestion, skin contact and inhalation exposure routes. CF values of Ni and Zn in 100% and 6.25% of farmlands were above 1, showing moderate contamination conditions. EF values of metals in farmlands were recorded as “no enrichment”, “minimal enrichment” and “moderate enrichment” classes. Furthermore, it can be concluded that the all farms were uncontaminated except Ni (moderately contaminated) based on I<sub>geo</sub>. This is an indication that the selected TEs in the agricultural soils have no appreciable threat to human health.

Issues arise from the rapid process of urbanization, industrialization and land use has attracted worldwide public attention from both environmental and health perspectives<sup>1,2</sup>. Soil is the skin of our globe and is necessary for living organisms as it provides elements and nutrients for plants growth and serves as habitat for microflora and fauna<sup>3</sup>. The growing population in world significantly increase pressure on the farmlands. In order to improve the yield and profit of agricultural products, the excessive cultivation has inevitably resulted in the contamination of the soils by TEs. Farming is considered to be one of the main sources of As, Cu, Zn, Fe and Pb in the soils<sup>4–7</sup>. Among toxic and persistent pollutants found in agricultural soils, a special attention is paid on heavy metals. Heavy metals (including both metals and metalloids) are the most widely distributed elements of concern in

*Remediation and Health Risks of Heavy Metal Contaminated Soils* Qi Liao, Mariusz Gusiatin, Weichun Yang, 2024-10-18

Soil is the essential foundation for human survival. However, soil pollution and environmental problems have become increasingly evident in recent years. In particular, heavy metal pollution at various sites poses a serious threat to human health and ecological safety, becoming a significant social issue worldwide. Greener and environmentally friendly remediation technologies coupled with accurate evaluation of the potential risks, environmental impact, and human health of heavy metals in the soil have become urgently required. This Research Topic aims to gather the latest advancements in scientific research and applicable studies on:

- i the potential risk or impact of recently problematic heavy metals such as Sb, Ti, and cases of combined heavy metal pollution
- ii pollution formation, migration, and remediation of heavy metal in soil and groundwater
- iii novel methods to treat and reduce heavy metals in contaminated sites
- iv environmentally friendly remediation technology such as enhanced bioremediation and in situ remediation
- v assessment or modeling of the environmental or human health impact of heavy metals.

*Human and Ecological Risk Assessment*

Dennis J. Paustenbach, 2024-04-15

Understand the fundamentals of human risk assessment with this introduction and reference. Human risk assessments are a precondition for virtually all industrial action or environmental regulation. All the more essential in a world where chemical and environmental hazards are becoming more abundant. These documents catalog potential environmental, toxicological, ecological, or other harms resulting from a particular hazard, from chemical spills to construction projects to dangerous workplaces. They turn on a number of variables, of which the most significant is the degree of human exposure to the hazardous agent or process. *Human and Ecological Risk Assessment* combines the virtues of a textbook and reference work to introduce and analyze these vital documents. Beginning with the foundational theory of human health risk assessment, it then supplies case studies and detailed analysis illustrating the practice of producing risk assessment documents. Fully updated and authored by leading authorities in the field, the result is an indispensable work. Readers of the second edition of *Human and Ecological Risk Assessment* will also find over 40 entirely new case studies reflecting the latest in risk assessment practice. Detailed discussion of hazards including air emissions, contaminated food, and soil, hazardous waste sites, and many more. Case studies from multiple countries to reflect diverse international standards. *Human and Ecological Risk Assessment* is ideal for professionals and advanced graduate students in toxicology, industrial

Die Bioremediation ist ein Verfahren, bei dem biologische Verfahren eingesetzt werden, um industrielle Schadstoffe in verschiedenen Ökosystemen wieder in den natürlichen Stoffkreislauf zurückzuführen. Ob die Bioremediation erfolgreich ist oder nicht hängt entscheidend vom Verständnis des biotechnologischen Prozesses und von den Stärken und Schwächen der eingesetzten toxikologischen Verfahren ab.

[Environmental Analysis of Contaminated Sites](#) diskutiert umweltanalytische Verfahren und Methoden zur Bewertung der erfolgreichen Sanierung kontaminierter Bodensysteme. Ein nützlicher Leitfaden, der diese komplexe Thematik umfassend behandelt, indem er Toxizitätstests für den Bodenschutz, die Bioremediation und die Risikobewertung der Umweltgefährdung miteinander verbindet. Darüber hinaus beschreibt er das Zusammenwirken von toxikologischer Labor- und Felduntersuchung, Biotechnologie, Consultants und verschiedenen internationalen Umweltkontrollbehörden und erklärt, wie sie gemeinsam an einer erfolgreichen Auswertung sanierter Umweltsysteme arbeiten.
