Theory of Profit with Islamic Directions Zubair Hasan, 2016-07-08 THEORY OF PROFIT WITH ISLAMIC DIRECTIONS deals with a controversial and neglected but nonetheless important subject Readers will find the narration interesting and innovative for it does not discuss profit theories of various writers separately in chronological order instead it identifies issues in the area and analyses the views of various writers on each to propose restructuring of the theory as per Islamic directions The issues raised include the definition and seat of profit the cause of its emergence and sources the motivational aspects and their impact on allocation of resources and incomes distribution the nature of profit and the regulatory policy role The work concludes that the source of prevalent confusion on the subject lies in defining profit as a costs revenues differential of firms and the insistence that it is exclusively attributable to the entrepreneurs who tend to be vanishing in the modern corporate era For a reformulation of the theory to get rid of inconsistencies the work suggests that profit should be viewed only as a cost revenue differential delinked from reward the firm not the entrepreneur should be the focal point for its study the surplus beyond normal profit must be shared between capital and labour subject to a minimum wage constraint to promote social harmony and distributive justice This book will appeal to the general reader who is looking for a lucid narration on a topic of common interest Academics will find it interesting because of its historical updating and novelty of treatment University students of economics will find this work an invaluable resource

Fuller, Warren Young, 2025-02-17 A Financial Theory of the Business Cycle presents a new approach to business cycle theory based on the net present value The book develops a novel diagrammatic approach to illustrate how fractional reserve banking systematically distorts net present value calculations In addition to providing fresh insights the new diagrammatic approach provides a comparative framework that can be used to compare pre-existing theories including those of John Maynard Keynes Friedrich Hayek Milton Friedman and Robert E Lucas Jr The net present value is the most important concept in the theory and practice of modern finance As such it is the proper framework for explaining the systematic financial losses that occur during the business cycle Eugen von Böhm-Bawerk and Irving Fisher developed the modern theory of the net present value and the financial theory of the business cycle developed in this book is rooted in their tradition Although financial elements played a central role in their respective theories Keynes and Hayek did not use the net present value This failure created problems that still haunt business cycle theory today This book addresses these problems and attempts to steer financial theories of the business cycle back to the course set by Böhm-Bawerk and Fisher In addition to macroeconomists this book will appeal to financial economists money and banking experts accountants financial analysts and businesspeople generally
