**Economics for the Common Good** Jean Tirole, 2019-05-14 When Jean Tirole won the 2014 Nobel Prize in Economics he  
suddenly found himself being stopped in the street by complete strangers and asked to comment on issues of the day no  
matter how distant from his own areas of research His transformation from academic economist to public intellectual  
prompted him to reflect further on the role economists and their discipline play in society The result is Economics for the  
Common Good a passionate manifesto for a world in which economics far from being a dismal science is a positive force for  
the common good Economists are rewarded for writing technical papers in scholarly journals not joining in public debates  
But Tirole says we urgently need economists to engage with the many challenges facing society helping to identify our key  
objectives and the tools needed to meet them To show how economics can help us realize the common good Tirole shares his  
insights on a broad array of questions affecting our everyday lives and the future of our society including global warming  
unemployment the post 2008 global financial order the euro crisis the digital revolution innovation and the proper balance  
between the free market and regulation Providing a rich account of how economics can benefit everyone Economics for the

economic modeling of disasters and nurtured its early development He served as the social science program director at the  
National Center for Earthquake Engineering Research NCEER a university consortium sponsored by the National Science

Foundation and the Federal Emergency Management Agency of the United States In this capacity Barclay shepherded and attracted a number of regional scientists to the study of disasters He organized a conference held in the ill fated World Trade Center in September 1995 on The Economic Consequences of Earthquakes Preparing for the Unexpected He persistently advocated the importance of social science research in an establishment dominated by less than sympathetic natural scientists and engineers In 1993 Barclay organized the first of a series of sessions on Measuring Regional Economic Effects of Unscheduled Events at the North American Meetings of the Regional Science Association International RSAI This unusual nomenclature brought attention to the challenge that disasters largely unanticipated often sudden and always disorderly pose to the regional science modeling tradition The sessions provided an annual forum for a growing coalition of researchers where previously the literature had been fragmentary scattered and episodic Since Barclay s unexpected passing in 1997 we have continued this effort in his tradition
