Regulating Municipal Water Supply Concessions Yan Wei, 2014-06-28 This book discusses the recently introduced concession policy which is also known as PPP worldwide on municipal utilities policy in China. In this context, critics have claimed that there is a gap in accountability with regard to concessions. The author utilizes interdisciplinary methods and comparative studies taking into account the situation in the EU and US to analyze the accountability gap some feel will be created when the policy is implemented. Taking water sector concessions as the subject of discussion, the author distinguishes between three types of accountability: traditional bureaucratic accountability, legal accountability and public accountability. By systematically analyzing the essential problems involved, the book attempts to achieve a better understanding of concession and its application in the context of public utilities and finds that the alleged accountability gap is attributed to traditional bureaucratic accountability in China and the concession system per se.

Natural Resources and Human Rights Jérémie Gilbert, 2018-10-18 Natural resources and their effective management are necessary for securing the realisation of human rights. The management of natural resources is linked to broad issues of economic development as well as to political stability, peace and security, but it is also intimately connected to the political, economic, social and cultural rights of individuals and communities relying on these resources. The management of natural resources often leads to ill-planned development, misappropriation of land, corruption, bad governance, misaligned budget priorities, lack of strong institutional reforms and weak policies coupled with a continued denial of the human rights of local communities. This book argues that

human rights law can play an important role in ensuring a more effective and sustainable management of natural resources putting forward the idea of a human rights based normative framework for natural resource management It offers a comprehensive analysis of the different norms procedures and approaches developed under human rights law that are relevant to the management of natural resources Advocating for a less market and corporate approach to the control ownership and management of natural resources this book supports the development of holistic and coherent integration of human rights law in the overall international legal framework governing the management of natural resources

Public Economics and the Environment in an Imperfect World Lans Bovenberg, Sijbren Cnossen, 2012-12-06

Growing populations and economies have increased the public's awareness that the world's environmental resources are finite. The issues of global warming and the depletion of the ozone layer have given universal significance to what were once local and regional pollution problems. What is evident from *Public Economics and the Environment in an Imperfect World* is that Coasian negotiations fail to internalize the costs of environmental degradation often calling for public intervention through the market mechanism. In its consideration of such issues the book includes contributions on assessment problems, institutional aspects, the need for coordination and efficiency, and distribution issues.

Water Resources in Mexico Úrsula Oswald Spring, 2011-08-26

Water resources in Mexico are threatened by scarcity, pollution, and climate change. In two decades, water consumption doubled, producing water stress in dry seasons and semi-arid and arid regions. Water stress rises due to physical and economic stress. In seven parts, a multidisciplinary team analyzes hydrological processes in basins and their interaction with climate, soil, and biota. Competing water use in agriculture, industry, and domestic needs requires savings, decontamination processes, and desalination to satisfy the growing demand. Water quality affects health and ecosystems. This creates conflicts and cooperation that may be enhanced by public policy, institution building, and social organization.

Natural Resource Economics Barry C. Field, 2008-03-12

People make decisions regarding the use of natural resources every day, from the individual recycling a sheet of paper to governments of large nations creating energy policy. Those decisions ultimately affect people around the world. Their motivation and results are best framed and analyzed using the tools of natural resource economics. Field presents the methods and applications of the discipline in the latest edition of his popular text. The updated book retains its successful structure, first presenting basic economic principles as they apply to natural resource use and then examining the economic issues surrounding individual resources. New material is included on energy demand and efficiency, nonrenewable resources, individual transferable fishing quotas, water pricing, agricultural cropland programs, and the Endangered Species Act.

Management of Water Resources Musa Asad, 1999-01-01

Although procedures for pricing retail distribution have been established for a long time, methods for pricing bulk or wholesale water supplies are still evolving. How to finance the infrastructure and service of bulk water supply and how to use pricing to achieve efficient allocation and use of water as a resource are the central issues that emerge from discussions about bulk water pricing. Efficiency will lead to allocating water resources better, reducing water losses caused by poor maintenance of the supply systems, and increased monitoring of water quality. At first glance, Brazil may not appear to be a relevant country from which to draw lessons in distributing scarce water resources, since it contains 12 percent of the world's fresh water supply. However, with its vast territory and issues of regional drought and population explosion, Brazil provides a unique

environment in which to demonstrate how adequate pricing of bulk water on a regional level can help allocate water efficiently This paper offers a framework for bulk water pricing reform and examines the lessons from recent analytical work and practice in Brazil as well as relevant international experience It then offers recommendations for the development of both water pricing and allocation policies to facilitate continued implementation of bulk water pricing in Brazil
