The Spiritual Anatomy of Emotion Michael A. Jawer, 2009-05-21 A cutting edge examination of feelings not thoughts as the gateway to understanding consciousness Contends that emotion is the greatest influence on personality development Offers a new perspective on immunity stress and psychosomatic conditions Explains how emotion is key to understanding out of body experience apparitions and other anomalous perceptions Contemporary science holds that the brain rules the body and generates all our feelings and perceptions Michael Jawer and Dr Marc Micozzi disagree They contend that it is our feelings that underlie our conscious selves and determine what we think and how we conduct our lives The less consciousness we have of our emotional being the more physical disturbances we are likely to have from ailments such as migraines fibromyalgia chronic fatigue and post traumatic stress to anomalous perceptions such as apparitions and involuntary out of body experiences Using the latest scientific research on immunity sensation stress cognition and emotional expression the authors demonstrate that the way we process our feelings provides a key to who is most likely to experience

these phenomena and why They explain that emotion is a portal into the world of extraordinary perception and they provide the studies that validate the science behind telepathic dreams poltergeists and ESP The *Spiritual Anatomy of Emotion* challenges the prevailing belief that the brain must necessarily rule the body Far from being by products of neurochemistry the authors show that emotions are the key vehicle by which we can understand ourselves and our interactions with the world around us as well as our most intriguing and perennially baffling experiences *Terrapsychology* Craig Chalquist, Garret Barnwell, 2023-08-11 Reflecting on and exploring the connection between the environments in which we live and our moods motivations and dreams this insightful volume takes the growing field of terrapsychology into new and exciting directions This book draws together a group of contemporary voices in terrapsychology to explore lived topics such as ecotransference encountered with sacred place alternative mapping and expressions of solidarities with sacred sites place dreaming locianalysis trans species encounters deep genealogy terraplomacy and Hermeticism The chapters focus on praxis demonstrating how each author s relationship with the more than human world has been reenchanting revealing remembering and co creating relationships and community for life to flourish Co edited by Craig Chalquist and Garret Barnwell this collection will interest scholars students and practitioners across a range of fields including analytical psychology environment psychology and cultural anthropology **The Nature of Existence** Charlotte Harkness, 2018-11-03 This textbook explores the relationship between the natural world and psychological well being It draws upon a wide context brings the experience of our existence as part of the wider natural world to the forefront throughout and relates it to therapy practice in mainstream settings [The Web of Life Imperative](#) Michael J. Cohen, 2003 A book and course that teaches you the Natural Systems Thinking Process A nature connected learning tool enables our psyche to genuinely tap the healing powers of nature and regenerate 48 peaceful natural intelligences in our awareness and thinking Backyard or backcountry this practical multiple sense book empowers you to improve your health relationships and happiness by replacing destructive omissions in how we learn to think with rejuvenated natural sensitivities Learn how to reconnect your psyche to its nurturing origins in the restorative vigor sustainability and peace of nature Help yourself and your community benefit from the profound renewal that lies in the magnificence of a beautiful day the wisdom of an ancient tree and the fortitude of a weed Let nature s invincible healing energies help your thinking transform your stress disorders and harmful bonds into constructive personal social and environmental rewards Grow from hands on accredited Applied Biophilia classes essays activities research internships ethics counseling and healing Strengthen your inborn natural genius Enjoy an Earth friendly job career internship or teaching certification Take advantage of subsidized online courses and degree programs To understand how and why this book will work for you as it has for so many others consider the following key intelligence test question one that ordinarily might help assess a person s mathematical aptitude If you count a dog s tail as one of its legs how many legs does a dog have Five of course is the correct answer for a math test Intelligent people say five because it is

valid in mathematical systems and contemporary thinking and is highly regarded and rewarded by our society. However, we don't solely live our lives or think in mathematical systems. Our natural sense of reason can consider what we know from our actual contact with a real normal dog too. That's when our multitude of other natural senses come into play: senses of touch, motion, color, texture, language, sound, smell, consciousness, community, trust, contrast, and love. They each provide further information and help our sense of reason make more sense and a more informed decision. They enable our thinking to register that a tail is different than a leg, that a dog has four legs, not five, no matter what might be correct in mathematical logic. It is a grave mistake for anyone not to take seriously the difference between 4 leg and 5 leg ways of knowing and our learned prejudice for the latter. As this book shows, when they are not in balance, the schism between their two different ways of registering the world is significant. Four leg knowing is a magnificent psychological and physiological phenomenon with deep natural system roots into the eons, the heart of Earth, and our psyche. It brings our widely diverse multiplicity of natural sensory experiences into our awareness. Five leg knowing produces important awareness through abstract imagination, labels, and stories. However, when it does not also seek and contain 4 leg knowledge, it results not only in our desensitization but in the separation of our thinking from the regenerative powers of Earth's natural systems within and around us. This profound loss produces the many destructive side effects of our artificial world that we can not readily solve. Four leg versus 5 leg discord creates an entrenched conflict in our psyche between how we think and how nature works. This is a point source of the stress and contamination our society produces in the integrity of people and the environment. It generates our many disorders and troubles that are seldom found in nature. It is important to recognize that by financially and socially rewarding us for getting good grades or for making the grade by using nature isolated 5 leg thinking, our socialization habitually bonds conditions, programs, or ad

The Environment and Mental Health Ante Lundberg, 2013-05-13

Environmental illness is a concept of growing concern to all health professionals. Patients with problems presumably caused by sick buildings, electromagnetic fields, and hypersensitivity to chemicals, to name a few, are often referred to psychologists, psychiatrists, and other counselors. The battery worker with fatigue, headaches, abdominal pain, and an elevated lead level; the assembly worker with pain and numbness in her hand and delayed median nerve conduction; the patient who develops typical contact dermatitis after working with epoxies—these are straightforward cases. But they are in the minority. In many cases, needy, demanding, and difficult patients present complex and challenging psychological issues. Practitioners often lack the training or wisdom to handle these issues effectively. We know that exposure to lead, mercury, and PCBs affects psychological development and behavior; we know much less about the effects of thousands of other chemicals in the environment. In addition, global climate change, social disruption, and the spread of infections will in the near future expose people to novel environmental threats. Symptoms caused by toxins can overlap those caused by fear, stress, and depression, and the clinical picture can mimic a variety of other mental disorders. On the other hand, the natural environment can also be a healer.

Research shows that hospital stays are shortened and the need for pain medication reduced for patients exposed to nature even in images or to the company of animals Nursing home patients live longer if allowed to keep pets and one controlled study shows that caring for animals reduces disruptive behavior in even the most difficult ADD children This book offers the first overview of the many ways the environment can affect mental health and illness It will prove to be an important and valuable resource for physicians in psychiatry public health and environmental medicine for clinical and counseling psychologists and social workers and for environmental researchers and advocates worldwide
