Handbook of Environmental Risk Assessment and Management Peter P. Calow, 2009-07-08. At the heart of environmental protection is risk assessment: the likelihood of pollution from accidents, the likelihood of problems from normal and abnormal operation of industrial processes, the likely impacts associated with new synthetic chemicals and so on. Currently risk assessment has been very much in the news: the risks from BSE and E coli and the public perception of risks from nuclear waste etc. This new publication explains how scientific methodologies are used to assess risk from human activities and the resultant objects and wastes on people and the environment. Understanding such risks supplies crucial information to frame legislation, manage major habitats, businesses and industries and create development programmes. Unique in combining the science of risk assessment with the development of management strategies. Covers science and social science, politics, economics, psychology aspects. Very timely. Risk assessment lies at the heart of decision making in various topical environmental questions: BSE, Brent Spar, nuclear waste.
