Figural Synthesis:

Figural Synthesis Peter C. Dodwell, Terry Caelli, 2021-12-29 The aim of this book originally published in 1984 was to bring together a number of approaches to this important topic Significant advances had been made in the two decades before publication in our understanding of many aspects of the coding that occurs along the visual pathways The major developments had been associated with probing the nature of logical processes whether physiologically or psychophysically and relatively less attention had been devoted to the problem of how such locally coded knowledge is put together to yield coherent representations of spatially and temporally extended patterns that is to figural synthesis Thus while a great deal was known about the responses of individual cells in the visual system to controlled stimulation and about the specificity of the orientational and spatial frequency tuning of channels assessed psychophysically there had been much less discussion of how such knowledge could be brought to bear on the general problems of understanding pattern recognition *A Theology of the Sublime* Clayton Crockett, 2002-01-04 A Theology of the Sublime is the first major response to the influential and controversial Radical Orthodoxy movement Clayton Crockett develops a constructive radical theology from the philosophy of Immanuel Kant a philosophy attacked by Radical Orthodoxy to show Kant's relevance to postmodern philosophy and contemporary theology **Meditation** Deane H. Shapiro (Jr.), Roger N. Walsh, Many claim that meditation is effective in the treatment of many ailments associated with stress and high blood pressure and in the management of pain While there are many popular books on meditation few embrace the science as well as the art of meditation In this volume Shapiro and Walsh fill this need by assembling a complete collection of scholarly articles Meditation Classic and Contemporary Perspectives From an academic rather than a popular vantage the volume takes the claims and counterclaims about meditation to a deeper analytical level by including studies from clinical psychology and psychiatry neuroscience psychophysiology and biochemistry Each selection is a contribution to the field either as a classic of research or by being methodologically elegant heuristically interesting or creative Original articles cover such topics as the effects of meditation in the treatment of stress hypertension and addictions the comparison of meditation with other self regulation strategies the adverse effects of meditation and meditation induced altered states of consciousness Concluding with a major bibliography of related works Meditation offers the reader a valuable overview of the state and possible future directions of meditation research Today in the popular media and elsewhere debate continues Is meditation an effective technique for spiritual and physical healing or is it quackery Meditation Classic and Contemporary Perspectives weighs in on this debate by presenting what continues to be the most complete collection of scholarly articles ever amassed on the subject of meditation **Figural Philology** Adi Efal, 2016-10-20 Though inspired by a Panofskyan legacy this book diverges at certain points from Erwin Panofsky's declared objectives and calls attention to several of aspects that were until now less accentuated in his intellectual reception Insisting on the importance of iconology as a method for art history and the humanities in general it shows how examining this

promotes a cooperation between the history of art and the history of philosophy It discusses whether Panofsky's method could be of use for general questions in the epistemology of the historical sciences that examine human works Figural Philology also shows that Panofsky shares affinities with twentieth century romance philology A reading of Panofsky's work alongside the philological enterprise of Erich Auerbach and several other authors demonstrates that a proper appropriation of the philological impulse can provide a way out of the methodological antimony still hanging between hyper formalist and hyper theoretical approaches to the history of art

Kant, Wittgenstein, and the Performativity of Thought Aloisia Moser, 2021-08-18 This book explores the idea that there is a certain performativity of thought connecting Kant's Critique of Pure Reason and Wittgenstein's Tractatus Logico Philosophicus On this view we make judgments and use propositions because we presuppose that our thinking is about something and that our propositions have sense Kant's requirement of an a priori connection between intuitions and concepts is akin to Wittgenstein's idea of the general propositional form as sharing a form with the world Aloisia Moser argues that Kant speaks about acts of the mind not about static categories Furthermore she elucidates the Tractatus logical form as a projection method that turns into a so called zero method whereby propositions are merely the scaffolding of the world In so doing Moser connects Kantian reflective judgment to Wittgensteinian rule following She thereby presents an account of performativity centering neither on theories nor methods but on the application enacting them in the first place

The Philosophy of Kant Explained John Watson, 1908 *Gilles Deleuze's Transcendental Empiricism* Marc Rolli, 2016-09-20 Deleuze's readings of Hume Spinoza Bergson and Nietzsche respond to philosophical critiques of classical and modern empiricism However Deleuze's arguments against those critiques by Kant Hegel Husserl and Heidegger consolidate the philosophy of immanence that can be called transcendental empiricism Marc Rolli offers us a detailed examination of Gilles Deleuze's philosophy of transcendental empiricism He demonstrates that Deleuze takes up and radicalises the empiricist school of thought developing a systematic alternative to the mainstreams of modern continental philosophy

Kant and the Demands of Self-Consciousness Pierre Keller, 1998 In Kant and the Demands of Self Consciousness Pierre Keller examines Kant's theory of self consciousness and argues that it succeeds in explaining how both subjective and objective experience are possible Previous interpretations of Kant's theory have held that he treats all self consciousness as knowledge of objective states of affairs and also that self consciousness can be interpreted as knowledge of personal identity By developing this striking new interpretation Keller is able to argue that transcendental self consciousness underwrites a general theory of objectivity and subjectivity at the same time

Cognitive Psychology Ulric Neisser, 2014-11-27 First published in 1967 this seminal volume by Ulric Neisser was the first attempt at a comprehensive and accessible survey of Cognitive Psychology as such it provided the field with its first true textbook Its chapters are organized so that they began with stimulus information that came inward through the organs of sense through its many transformations and reconstructions and finally through to its eventual use in thought and memory The volume inspired

numerous students enter the field of cognitive psychology and some of the today's leading and most respected cognitive psychologists cite Neisser's book as the reason they embarked on their careers **A Study of Kant** James Ward,1922

Cognition in Schizophrenia and Paranoia Peter A. Magaro,2023-07-21 Originally published in 1980 Cognition in Schizophrenia and Paranoia presents a theoretical framework that relates three fields of psychology the experimental research in psychopathology the developmental literature on intellectual growth and the literature on hemispheric specialization The specifications of the separate processes and their integration provides the means to reanalyze our empirical operations and theoretical terms in order to provide a more complete level of understanding or at least alert us to additional possibilities in research strategies Today it can be read in its historical context *Surviving in the Hi-Tech World - Memoirs of a life in computers* Ernie Dainow,2024-05-01 Surviving in the Hi Tech World follows the many ups and downs of my years as a software developer in the high tech industry starting in the mainframe era It provides a window into what it is like to work in the computer field I worked for many different organizations from academia and large companies to medium sized companies and several startups The stories weave my work experience with explanations of the technology of the period In the process it follows the revolutionary changes in computer hardware and software from large mainframes to personal microcomputers and the evolution of early networks into the global Internet When I was a psychology student in university I became interested in the possibilities of using computers to model and understand human thinking I completed a Master's degree in Artificial Intelligence in Computer Science in 1970 but my interest in doing academic research shifted to an interest in building real world systems My first job in computers was with Univac the company that had built one of the first general purpose commercial computers I switched jobs for many different reasons sometimes because of interest and at other times because of necessity Each chapter in the book covers the different jobs and places that I worked My journey took me from Montreal to London Glasgow Wisconsin Vancouver and Toronto Each job has its own story as I progressed through a series of adventures There are stories of people who became multi millionaires and one who went to jail What, Then, Is Time? Eva Brann,2001-04-25 What is time Well known philosopher and intellectual historian Eva Brann mounts an inquiry into a subject universally agreed to be among the most familiar and the most strange of human experiences Brann approaches questions of time through the study of ten famous texts by such thinkers as Plato Augustine Kant Husserl and Heidegger showing how they bring to light the perennial issues regarding time She also offers her independent reflections Examining the three phases of time past present and future she argues that neither external time nor the time of the human past is real the one is a comparison of motions and the other a projection of memory She concludes that true time is internal and has its origin in the imaginative structure of memory and expectation Throughout her rich and original study Brann never fudges the central fact that time is a mystery **Visual Masking** Bruno Breitmeyer, Haluk Ogmen,2006-04-20 Where most current approaches to the study of visual consciousness adopt a steady state view the approach presented in this book

explores its dynamic properties down to a resolution in the millisecond range

BOOK JACKET *Heinz Werner and Developmental Science* Jaan Valsiner, 2006-11-22 Heinz Werner 1890-1964 was one of the three key developmental psychologists of the 20th century along with Jean Piaget and Lev Vygotsky This book is a new exploration of Werner's ideas and their social contexts in Vienna in his student years in Hamburg up to 1933 followed by the years of transit as an immigrant to America at times of economic depression finally culminating in his establishment of the prominent Clark tradition in American psychology in the 1950s The book offers an in depth analysis of Werner's ideas as they were originally formulated in Vienna and Hamburg and how they were changed by North American influences Werner's pivotal role between European and American intellectual traditions is illuminated through the use of rich memories of his former students unique documents from Werner's personal library at Clark and analyses of links with other European traditions in philosophy and biological sciences The European period prior to 1933 in Werner's academic life is found to be definitive for Werner's contributions to science The ideas developed in his early career continued in the form of a productive empirical research program in the 1950s at Clark An analysis of the social intellectual climate of the development of psychology in America in the 1950s is a special feature of this book that will further enhance an understanding of Werner's unique contribution This book will be of interest to developmental psychologists sociologists and historians of science philosophers practitioners working in special education and neuropsychology and for general readers interested in the history of ideas and life courses of scientists

The Aesthetics of Enchantment in the Fine Arts M. Kronegger, Anna-Teresa Tymieniecka, 2013-03-14 Let us revive the true sense of fine arts enchantment In the conceptualised commercialised artificial approach to fine arts we forgot its authentic experiential sense It lies at the imaginative heart of all arts there to be retrieved by the creative recipient as the very truth of it all

Synergetics of Cognition Hermann Haken, Michael Stadler, 2012-12-06 This book presents the invited lectures given at the International Symposium on Synergetics of Cognition held at SchloB Elmau Bavaria Fed Rep of Germany June 4-8 1989 The understanding of the processes underlying cognition is certainly one of the most challenging and difficult problems confronting the human mind It is an enterprise that requires the cooperation of scientists from fields ranging from the neurosciences and psychology through biology to the computer sciences physics and mathematics The papers included in this volume reflect this joint effort As will be evident there is a remarkable convergence of ideas stemming from various fields for instance the earlier ideas on Gestalt theory celebrate a come back and remarkable analogies are being established with modern concepts of self organization as dealt with in the interdisciplinary field of synergetics The individual topics range from the microscopic level

where new exciting results on specific oscillations of neural activity are reported to computer simulations of perception and finally psychological experiments at the macroscopic level We hope that this book will convey to its readers the same enthusiasm that was felt by the participants of the symposium We wish to thank Mrs U Funke for the excellent organisation of the symposium and the Volkswagen Stiftung Hannover for its financial support We are furthermore grateful to Christoph Stadler and Zora Franko for their help in compiling the name and subject indexes Finally we wish to thank Springer Verlag in particular Dr Angela Lahee for the excellent cooperation

Visual Thought Liliana Albertazzi, 2006-12-20 This volume starts from an interdisciplinary expertise of the contributors and chooses to work on the very origins of conscious qualitative states in perception The leading research paradigm can be synthesized in phenomenology to neurons to stimuli and backwards since as a starting point it has taken the phenomenal appearances in the visual field Specifically the leading theme of the volume is the co presence and interaction of diverse types of spaces in vision like the optical space of psychophysics and of neural elaboration the qualitative space of phenomenal appearances and its relation with the pictorial space of art The contributors to the volume agree in arguing that those spaces follow different rules of organization whose specific singularity and reciprocal dependence have to be individuated as a preliminary step to understand the architecture of the conscious awareness of our environment and to conceive its potential implementation in constructing any kind of embodied intentional agents Series B

Virtual and Adaptive Environments Lawrence J. Hettinger, Michael W. Haas, 2003-06-01 With contributions from a collection of authors consisting of many recognizable experts in the field of virtual and adaptive environments as well as many up and coming young researchers this book illustrates the many ways in which psychological science contributes to and benefits from the increased development and application of these nascent systems Discussing issues from both a user and technology based standpoint the volume examines the use of human perception cognition and behavior The book builds a foundation on the assumption that these systems are first and foremost human centered technologies in that their purpose is to complement and extend human capabilities across a wide variety of domains
