Figures of Thought David Reed, 2003-09-02 Rarely has the history or philosophy of mathematics been written about by mathematicians and the analysis of mathematical texts themselves has been an area almost entirely unexplored Figures of Thought looks at ways in which mathematical works can be read as texts examines their textual strategies and demonstrates that such readings provide a rich source of philosophical issues regarding mathematics issues which traditional approaches to the history and philosophy of mathematics have neglected David Reed a professional mathematician himself offers the first sustained and critical attempt to find a consistent argument or narrative thread in mathematical texts In doing so he develops new and fascinating interpretations of mathematicians work throughout history from an in depth analysis of Euclid's Elements to the mathematics of Descartes and right up to the work of contemporary mathematicians such as Grothendieck He also traces the implications of this approach to the understanding of the history and development of mathematics

Metaphor Studies: Theories, Methods, Approaches, and Future Perspectives Ilaria Rizzato, Valentina Cuccio, Aletta Gesina Dorst, 2024-12-12 Metaphor has been studied as a linguistic conceptual and communicative phenomenon in a wide range of disciplines including linguistics literary studies philosophy education political science media studies communication science psychology and neurosciences While the Cognitive Theory of Metaphor has dominated the field since the cognitive turn in the 1980s alternatives have been proposed including the Neural Theory of Metaphor the Relevance Theory Approach the Complex Systems Approach and the Dynamic Systems Approach Though studies are still often text based there is a growing body of research on visual metaphor multimodal metaphor and gestural metaphor as well as experimental research ranging from studies on metaphor processing and comprehension to studies in NLP and machine learning Metaphor Studies is thus a highly interdisciplinary field that encompasses a myriad of theories approaches and methods In current metaphor research each of these strands is facing new challenges and offering new venues of cutting edge research using state of the art technologies Researchers tend to focus on their own research areas and provide in depth views within the scope of their own

disciplines Metaphor Studies do not seem to escape this phenomenon in spite of the large number of disciplines they draw on ranging from linguistics to psychology to the theory of science Hence there seem to be little cooperation and communication across different fields methods and approaches having metaphors and figurative language as their main object of investigation This Research Topic aims to promote cross fertilization among the many research areas involved in Metaphor Studies thus bringing together different methods and perspectives and offering a comprehensive overview of the possible research scenarios
