A Practical Introduction to Fuzzy Logic using LISP Luis Argüelles Mendez, 2015-09-11 This book makes use of the LISP programming language to provide readers with the necessary background to understand and use fuzzy logic to solve simple to medium complexity real world problems It introduces the basics of LISP required to use a Fuzzy LISP programming toolbox which was specifically implemented by the author to teach the theory behind fuzzy logic and at the same time equip readers to use their newly acquired knowledge to build fuzzy models of increasing complexity The book fills an important gap in the literature providing readers with a practice oriented reference guide to fuzzy logic that offers more complexity than popular books yet is more accessible than other mathematical treatises on the topic As such students in first year university courses with a basic tertiary mathematical background and no previous experience with programming should be able to easily follow the content The book is intended for students and professionals in the fields of computer science and engineering as well as disciplines including astronomy biology medicine and earth sciences Software developers may also benefit from this book which is intended as both an introductory textbook and self study reference guide to fuzzy logic and its applications The complete set of functions that make up the Fuzzy LISP programming toolbox can be downloaded from a companion book s website

Early Reading Instruction Diane McGuinness, 2006-01-20 Early Reading Instruction is a comprehensive analysis of the research evidence from early writing systems to computer models of reading In this book Diane McGuinness provides an innovative solution to the reading war the century old debate over the efficacy of phonics sound based versus whole word meaning based methods She has developed a prototype a set of elements that are critical to the success of a reading method McGuinness shows that all writing systems without exception are based on a sound unit in the language This fact and other findings by paleographers provides a platform for the prototype Other elements of the prototype are based on modern research For example observational studies in the classroom show that time spent on three activities strongly predicts reading success learning phoneme symbol correspondences practice at blending and segmenting phonemes in words and copying writing words phrases and sentences

Most so called literacy activities have no effect and some like sight word memorization have a strongly negative effect The National Reading Panel 2000 summarized the research on reading methods after screening out thousands of studies that failed to meet minimum scientific standards In an in depth analysis of this evidence McGuinness shows that the most successful methods children reading a year or more above age norms include all the elements in the prototype Finally she argues because phonics type methods are consistently shown to be superior to whole word methods in studies dating back to the 1960s it makes no sense to continue this line of research The most urgent question for future research is how to get the most effective phonics programs into the classroom
