How agri-food value chain employment and compensation evolve with structural transformation Yi, Jing, Jiang, Shiyun, Tran, Dianna, Gómez, Miguel I., Canning, Patrick, Bloem, Jeffrey R., Barrett, Christopher B., 2025-02-20 The traditional structural transformation narrative emphasizes inter sectoral labor reallocation out of agriculture ignoring whether workers exit agri food value chains or merely migrate within them from primary agricultural production to downstream food industries We introduce a method to decompose multiregional input output table data into industry and country specific annual labor value added estimates by final consumer market segment domestic food at home domestic food away from home or exports and match with industry specific employment data to estimate average worker compensation Using data covering most of the global economy 1993 2021 we report ten stylized facts that sharpen the traditional narrative about labor reallocation amid structural transformation As incomes grow labor exits primary production for downstream agri food value chain segments that maintain a steady economywide employment share while offering jobs that pay better than farm work Women disproportionately move from primary production to downstream consumer facing retail and food service while men migrate to better paying midstream jobs increasing gender pay inequality within the value chain Employment shifts are strongly associated with changes in national per capita income but not with agricultural total factor productivity growth

Lacan & the Human Sciences Alexandre Leupin, 1991-01-01 The psychoanalyst Jacques Lacan 1901 81 left a legacy of thought that increasingly commands the attention of American scholars and critics His provocative essays and wide ranging seminars and lectures attempted with remarkable success to bridge the supposedly unbridgeable gap between the humanities and modern science For some time his influence has shadowed the theoretical work being done in philosophy psychology anthropology women s studies and literature In *Lacan and the Human Sciences* eight eminent scholars examine how ideas entered these fields how well they were understood and adapted and what fruit they have produced The editor Alexandre Leupin whose introduction reveals the underpinnings of Lacan s thought views the book as a blueprint for overcoming the present impasses of scientific and humanistic discourses and their imaginary contradictions The essays demonstrate the interdisciplinary nature of Lacanian psychoanalysis The relevance of his work to epistemology is considered by Jean Claude Milner Fran ois Regnault and Ellie Ragland Sullivan to anthropology by Jean Joseph Goux to feminist studies by Jane Gallop and to literature by Dennis Porter and Denis Hollier The result is a book that points to a new and more pertinent way of dealing on one hand with the problems of epistemology and on the other with the question of literary theory in the humanities

Modern Thermodynamics for Chemists and Biochemists Dennis Sherwood, Paul Dalby, 2018-05-11 Thermodynamics is fundamental to university and college curricula in chemistry physics

engineering and many life sciences around the world It is also notoriously difficult for students to understand learn and apply What makes this book different and special is the clarity of the text The writing style is fluid natural and lucid and everything is explained in a logical and transparent manner Thermodynamics is a deep and important branch of science and this book does not make it easy But it does make it intelligible This book introduces a new Fourth Law of Thermodynamics based on the notion of Gibbs free energy which underpins almost every application of thermodynamics and which the authors claim is worthy of recognition as a law The last four chapters bring thermodynamics into the twenty first century dealing with bioenergetics how living systems capture and use free energy macromolecule assembly how proteins fold and macromolecular aggregation how for example virus capsids assemble This is of great current relevance to students of biochemistry biochemical engineering and pharmacy and is covered in very few other texts on thermodynamics The book also contains many novel and effective examples such as the explanation of why friction is irreversible the proof of the depression of the freezing point and the explanation of the biochemical standard state
