The Oxford Guide to Financial Modeling Thomas S. Y. Ho,Sang-bin Yi,2004

The essential premise of this book is that theory and practice are equally important in describing financial modeling In it the authors try to strike a

balance in their discussions between theories that provide foundations for financial models and the institutional details that provide the context for applications of the models. The book presents the financial models of stock and bond options, exotic options, investment grade and high yield bonds, convertible bonds, mortgage backed securities, liabilities of financial institutions, the business model, and the corporate model. It also describes the applications of the models to corporate finance. Furthermore, it relates the models to financial statements, risk management for an enterprise, and asset liability management with illiquid instruments. The financial models are progressively presented from option pricing in the securities markets to firm valuation in corporate finance, following a format to emphasize the three aspects of a model: the set of assumptions, the model specification, and the model applications. Generally, financial modeling books segment the world of finance as investments, financial institutions, corporate finance, and securities analysis, and in so doing they rarely emphasize the relationships between the subjects. This unique book successfully ties the thought processes and applications of the financial models together and describes them as one process that provides business solutions. Created as a companion website to the book, readers can visit www.thomasho.com to gain deeper understanding of the book's financial models. Interested readers can build and test the models described in the book using Excel, and they can submit their models to the site. Readers can also use the site's forum to discuss the models and can browse server-based models to gain insights into the applications of the models. For those using the book in meetings or class settings, the site provides Power Point descriptions of the chapters. Students can use available question banks on the chapters for studying.

The Known, the Unknown, and the Unknowable in Financial Risk Management Francis X. Diebold, Neil A. Doherty, Richard J. Herring, 2010-05-09. A clear understanding of what we know, don't know, and can't know should guide any reasonable approach to managing financial risk, yet the most widely used measure in finance today, Value at Risk or VaR, reduces these risks to a single number, creating a false sense of security among risk managers, executives, and regulators. This book introduces a more realistic and holistic framework called KuU: the Known, the Unknown, and the Unknowable, that enables one to conceptualize the different kinds of financial risks and design effective strategies for managing them. Bringing together contributions by leaders in finance and economics, this book pushes toward robustifying policies, portfolios, contracts, and organizations to a wide variety of KuU risks. Along the way, the strengths and limitations of quantitative risk management are revealed. In addition to the editors, the contributors are Ashok Bardhan, Dan Borge, Charles N. Bralver, Riccardo Colacito, Robert H. Edelstein, Robert F. Engle, Charles A. E. Goodhart, Clive W. J. Granger, Paul R. Kleindorfer, Donald L. Kohn, Howard Kunreuther, Andrew Kuritzkes, Robert H. Litzenberger, Benoit B. Mandelbrot, David M. Modest, Alex Muermann, Mark V. Pauly, Til Schuermann, Kenneth E. Scott, Nassim Nicholas Taleb, and Richard J. Zeckhauser. Introduces a new risk management paradigm. Features contributions by leaders in finance and economics. Demonstrates how killer risks are often more economic than statistical and crucially linked to incentives. Shows how to invest and design policies amid financial uncertainty.

In April the works were held in Cogne Aosta Valley Italy and in November in Turku Finland. The Group was founded eight years ago and at present is formed by some hundreds of people from over ten European countries and from the United States. The unusually high rhythm of two Meetings per years has

been always kept with the exception of one of the first years This reveals the strong vitality of this community The wide variety of papers presented and discussed together with the originality of their approach and of the results also witnesses the quality of the work the Group is doing in Finance There are more than one way to work in this fastly growing field A largely diffused approach is mainly oriented in building theories to be cast within some general economic paradigm If some simplifications are needed to get perfect theoretical coherence with the preferred paradigm they are easily accepted The most diffuse approach within the Group although attentive to general theories tries sometimes to build workable models where many relevant details of the reality are captured even if the price is not to adhere to some general theory This does not mean of course that the Group is against general paradigms
