Malm,Wim Carton,2024-10-01 A scathing critique of proposals to geoengineer our way out of climate disaster by the bestselling author of *How to Blow Up a Pipeline* It might soon be far too hot on this planet What do we do then In the era of overshoot schemes abound for turning down the heat not now but a few decades down the road We re being told that we can return to liveable temperatures by means of technologies for removing CO2 from the air or blocking incoming sunlight If they even exist such technologies are not safe They come with immense uncertainties and risks Worse like magical promises of future redemption they might provide reasons for continuing to emit in the present But do they also hold some potentials In *Overshoot* two leading climate scholars subject the plans for saving the planet after it s been wrecked to critical study Carbon dioxide removal is already having effects as an excuse for continuing business as usual while geoengineering

promises to bail out humanity if the heat reaches critical levels Both distract from the one urgent task to slash emissions now There can be no further delay The climate revolution is long overdue and in the end no technology can absolve us of its tasks
