## **Financial Economics:**

**Theory and Reality in Financial Economics** George M. Frankfurter, 2007 The current literature on financial economics is dominated by neoclassical dogma and supposedly the notion of value neutrality However the failure of neoclassical economics to deal with real financial phenomena suggests that this might be too simplistic of an approach This book consists of a collection of essays dealing with financial markets imperfections and the inability of neoclassical economics to deal with such imperfections Its central argument is that financial economics as based on the tenets of neoclassical economics cannot answer or solve the real life problems that people face It also shows the direct relationship between economics and politics OCo something that is usually denied in academic models given that science is supposed to be value neutral In this thought provoking and avant garde book the author not only exposes what has gone wrong but also suggests reforms to both the academic and the political economic systems that might help make markets fair rather than efficient Drawing on interdisciplinary fields this book will appeal to readers who are interested in finance economics business the political economy and philosophy Sample Chapter s Foreword 37 KB Chapter 1 Method and Methodology 146 KB Contents Method and Methodology What is All Efficiency Still Autistic Finance The Young Finance Faculty s Guide to Publishing Prolific Authors in Finance For Profit Education An Idea That Should be Put to Rest Weep Not for Microsoft Monopoly s Fatal Exception The Socio Economics of Scandals Desperately Seeking Toto And Now for Something Entirely Different After the Ball Capitalism or Industrial Fiefdom The Theory of Fair Markets TFM Toward a New Finance Paradigm Readership Graduate students of finance students of economics economic methodology and philosophy of science

Makhija, Stephen P. Ferris, 2012-11-12 This volume contains

eight empirical papers that examine corporate governance from a number of different perspectives Essays in Financial Economics Rita Biswas, Michael Michaelides, 2019-10-24 This volume dedicated to John W Kensinger explores a variety of topics in financial economics including firm growth investment risks and the profitability of the banking industry With its global perspective Essays in Financial Economics is a valuable addition to the bookshelf of any researcher in finance

Essays in Financial Economics Francisco Jose Guedes dos Santos, 2011 This dissertation consists of three essays that examine various problems in financial economics Chapter 1 fills in a gap in the IPO literature by documenting a close connection between IPO underpricing and the long term underperformance of IPOs Firms going public in periods of low

underpricing do not underperform in the long run while firms going public in high underpricing periods do. Furthermore, IPOs in later stages of high underpricing periods underperform even relative to their offer prices, which suggests that many of the most underpriced IPOs are in fact priced above fundamental value. This result is unlikely to be explained by differences in risk or to be driven by a peso problem. I also find that firms going public in later stages of high underpricing periods display worse operating performance and profitability, lower asset growth, lower investment rates, and higher cash holdings. Finally, I provide evidence that investor sentiment is stronger in high underpricing periods. These results are consistent with a setting in which low quality firms in periods in which the average underpricing in the market is high try to exploit investors' sentiment by going public.

Chapter 2 looks at the return predictability information in Single Country Closed End Fund (SCCEF) discounts. It is long argued that discounts in closed end funds are caused by differences in sentiment between investors that trade the fund and investors that trade the underlying assets. SCCEFs provide an interesting setting given the clear market segmentation. American SCCEFs are priced by American investors while underlying assets are mainly traded by investors in the respective country. I argue that if cross sectional and time series variation in SCCEFs are linked to differences in sentiment, then the SCCEF discount can be used to predict future performance of SCCEFs, international stock markets, or both. The evidence on international stock markets' return predictability using SCCEF discounts is mixed. A trading strategy designed to exploit potential differences in sentiment by buying and selling international stock indices delivers alphas of around 90bps per month in an International CAPM. Adding three extra factors: value, size, and momentum in U.S. equity does not change the result. However, once we control for international value and momentum in stock markets, we no longer observe positive alphas for short horizon investments. The evidence on SCCEF return predictability from SCCEF discounts is very strong. For all three asset pricing models considered, a strategy that exploits differences in sentiment yields positive alphas with magnitudes ranging from 2% to 4% per month.

In Chapter 3, I investigate how the stock market reacts to earnings surprises announced during major sport events in the U.S. In a rational and frictionless market, investors should not react differently to announcements released during sport events. However, major sport events combine two known psychological biases. First, sports can be distracting, impairing investors' judgment. Second, sports can change people's mood. Hence, through these biases, market prices could be affected. Considering the Super Bowl, World Series of Baseball, and NBA finals, I find that investors immediately after sport events underreact to positive surprises and overreact to negative surprises in earnings. After this initial reaction, I find that investors undo their mistakes in the following weeks to the announcement. However, for the most negative and positive surprises, they overcompensate. In this study, I show that non-relevant financial events have an impact on market prices. Moreover, I show that the observed impact cannot be explained only by limited attention as investor mood seems to be crucial to explain investors' reactions.

**New Paradigms in Financial Economics** Kazem Falahati, 2012-11-27 The recent global financial crisis has made the inadequacies of the scientific state of economics and finance glaringly obvious as these disciplines gave the false reassurance that such a self destructive phenomenon could not happen A similar phenomenon arose in the 1930 s when the pitfalls of the dominant economic theories were sharply exposed Since then the same analytical framework in its new versions has revealed a huge number of other empirical and experimental failures On the other hand the founders of the currently dominant theories in economics and finance i e the standard paradigm such as Walras 1834 1910 Modigliani 1918 2003 and Miller 1923 2000 have identified mathematical contradictions within their own foundational models the root cause of which no one has yet discovered The standard paradigm has thus lost the reason for its existence in the light of experience experiments and logical rigour This book identifies the heuristic cause of these external and internal contradictions of the standard paradigm and remedies these problems by offering a new paradigm which can explain and predict observed economic behaviour and resolve the extant behavioural empirical and experimental puzzles The new paradigm offers a dramatically improved understanding of economic behaviour at the micro as well as macro level of the economy within an over arching framework comprising the real and the financial sectors It does so in a rigorous but simple and clear way using an axiomatic approach It also offers policy recommendations on how the economy should be managed to avoid severe swings It therefore is of great interest to scholars and practitioners in economics and finance
