Hodes M.D., 2007-11-30 Steven E Hodes M D initially trained in traditional high caliber medical programs that led him through graduation at the Albert Einstein Medical School and to a fellowship at Mount Sinai Hospital But many years later he saw something vital missing in his approach to healthcare I was trained as a physician not a healer taught to view the patient as a machine suffering from some mechanical failure My purpose was to be the best diagnostician possible he explains Then events occurred that opened the eyes of this now veteran physician to deep insights about the mind body spirit connection That awakening moved him to a metaphysical view of health a view more spiritual than religious but still firmly grounded in science Embracing his role as a metaphysician he also began to see himself as a meta physician or doctor transformed meta by this new awareness In this book Hodes describes his journey to becoming a metaphysician on call He points out profound yet simple observations and beliefs that affect our perception of the nature of reality metaphysics which in turn can largely affect our well being in all senses body mind and spirit We all can and should take responsibility for our own well being on all levels he explains This book is designed to inspire us to ask our own questions and gather our own evidence to enhance all areas of our lives and well being and so find healing and peace      **How Customers Think** Gerald Zaltman, 2003 Despite the time and money spent on market research 60% to 80% of new offerings fail      **The Languages of the Brain** Albert M. Galaburda, Stephen M. Kosslyn, Yves Christen, 2002-12-15 The only way we can convey our thoughts to another person is through verbal language Does this imply that our thoughts ultimately rely on words This text takes the contrary position arguing that many possible languages of thought play different roles in the life of the mind      Epistemic Paternalism Guy Axtell, Amiel Bernal, 2020-06-22 This volume considers forms of information manipulation and restriction in contemporary society It explores whether and when manipulation of the conditions of inquiry without the consent of those manipulated is morally or epistemically justified The contributors provide a wealth of examples of manipulation and debate whether

epistemic paternalism is distinct from other forms of paternalism debated in political theory Special attention is given to medical practice for science communication and for research in science technology and society Some of the contributors argue that unconsenting interference with people's ability of inquiry is consistent with and others that it is inconsistent with efforts to democratize knowledge and decision making These differences invite theoretical reflection regarding which goods are fundamental whether there is a clear or only a moving boundary between informing and instructing and whether manipulation of people's epistemic conditions amounts to a type of intellectual injustice The collection pays special attention to contemporary paternalistic practices in big data and scientific research as the way in which the flow of information or knowledge might be curtailed by the manipulations of a small body of experts or algorithms

*The Brain at School: Educational Neuroscience in The Classroom* John Geake, 2009-08-16 At last a book that meaningfully links the evidence that we have so far gained from cognitive neuroscience with an understanding of learning and education This book avoids the usual pitfalls of over stretched interpretations of the research findings and outdated assumptions about teaching and learning It is a catalyst for bringing together the expertise and experience of professional educators with that of professional scientists in which Geake has expertly balanced accessibility and rigour Professor Martin Westwell Director Flinders Centre for Science Education in the 21st Century Flinders University Australia Within education there is a growing interest in neuroscience research and what it can teach us This book focuses on what neuroscience means for education professionals in key areas such as learning memory intelligence and motivation and addresses questions such as How does the brain enable us to learn Why do some children have learning difficulties such as ADHD or dyslexia How can actual scientific research be applied to pedagogy and curriculum design Furthermore the book explores common brain based learning schemes and exposes the misunderstandings on which these are often based The author both an experienced teacher and cognitive neuroscientist offers teachers advice on how neuroscience can help them in their own teaching Each chapter includes practical classroom examples and case studies based on real life teaching experiences This friendly book is jargon free and no prior scientific knowledge is assumed of the reader It is thought provoking reading for practising teachers across all age ranges trainee teachers parents head teachers educational policymakers academics and educational psychologists

**The Knowledge-based Economy** Loet Leydesdorff, 2006 Challenging theoretically rich yet anchored in detailed empirical analysis Loet Leydesdorff's exploration of the dynamics of the knowledge economy is a major contribution to the field Drawing on his expertise in science and technology studies systems theory and his internationally respected work on the triple helix the book provides a radically new modelling and simulation of knowledge systems capturing the articulation of structure communication and agency therein This work will be of immense interest to both theorists of the knowledge economy and practitioners in science policy Andrew Webster Science Technology Studies University of York UK

---

This book is a ground breaking collection of theory and techniques to help understand the internal dynamics of the modern knowledge based economy including issues such as stability anticipation and interactions amongst components The combination of theory measurement and modelling gives the necessary power with which to address the complexity of modern networked social systems Each on its own would partly illuminate an innovation system but the combination sheds a far brighter light Mike Thelwall Information Science University of Wolverhampton UK

---

The sociologist Niklas Luhmann is considered one of the few social scientists possibly able to explain a decisive event once it has happened In this book Loet Leydesdorff answers the challenge to take Luhmann's analysis one step further by introducing anticipation into the theory This book provides a fascinating exploration of the use of recursion and incursion to model social processes Dirk Baecker Sociology Universität Witten Herdecke Germany

---

How can an economy based on something as volatile as knowledge be sustained The urgency of improving our understanding of a knowledge based economy provides the context and necessity of this study In a previous study entitled A Sociological Theory of Communications The Self Organization of the Knowledge based Society 2001 the author specified knowledge based systems from a sociological perspective In this book he takes this theory one step further and demonstrates how the knowledge base of an economic system can be operationalized both in terms of measurement and by providing simulation models

**Complexity Theory and the Politics of Education**, 2010-01-01 Complexity theory has become a major influence in discussions about the theory and practice of education This book focuses on a question which so far has received relatively little attention in such discussions which is the question of the politics of complexity The chapters in this book engage with this question in a range of different ways Whereas some contributions make a case for the promotion of complexity in education others focus more explicitly on questions concerning the reduction of complexity in and through education The chapters do so using theoretical historical and empirical arguments paying attention to a range of different educational settings including early childhood education school education post compulsory education lifelong learning and work based education and focusing on different aspects of these practices such as curriculum pedagogy assessment architecture and management Taken together the chapters not only reveal the potential of complexity for engaging with questions about the politics of education in new and different ways They also provide examples of a more reflexive engagement with the politics of complexity in education itself

**Vilfredo Pareto's Sociology** Alasdair J. Marshall, 2016-02-24 Vilfredo Pareto is a key figure in the history of economics and sociology His sociological works attempted to merge these two disciplines through a psychologistic analysis of society economy and politics This is the first book to rethink Pareto's contribution to classical sociology by focusing upon its psychological underpinning The author locates the origins of Pareto's psychologistic approach both within the history of Italian thought and within Pareto's own experiences of business and politics He evaluates Pareto's sociology through the lens of contemporary social science examining whether its explanatory power is growing rather than diminishing as levels of social and epistemological complexity rise The volume also explores Pareto's assumptions about personality through the lens of contemporary psychology It concludes with a psychometric study of Westminster MPs which clarifies and attests to Pareto's contemporary relevance and indicates that even practitioners of politics may gain much from reading Pareto
