Data Mining and Knowledge Discovery for Geoscientists Guangren Shi,2013-10-09 Currently there are major challenges in data mining applications in the geosciences This is due primarily to the fact that there is a wealth of available mining data amid an absence of the knowledge and expertise necessary to analyze and accurately interpret the same data Most geoscientists have no practical knowledge or experience using data mining techniques For the few that do they typically lack expertise in using data mining software and in selecting the most appropriate algorithms for a given application This leads to a paradoxical scenario of rich data but poor knowledge The true solution is to apply data mining techniques in geosciences databases and to modify these techniques for practical applications Authored by a global thought leader in data mining Data Mining and Knowledge Discovery for Geoscientists addresses these challenges by summarizing the latest developments in geosciences data mining and arming scientists with the ability to apply key concepts to effectively analyze and interpret vast amounts of critical information Focuses on 22 of data mining s most practical algorithms and popular application samples Features 36 case studies and end of chapter exercises unique to the geosciences to underscore key data mining applications Presents a practical and integrated system of data mining and knowledge discovery for geoscientists Rigorous yet broadly accessible to geoscientists engineers researchers and programmers in data mining Introduces widely used algorithms their basic principles and conditions of applications diverse case studies and suggests algorithms that may be suitable for specific applications

Evaluation and Optimization of File Organizations Through Analytic Modeling Shi Bing Yao,1974 The research concerns the selection of appropriate file structures and access methods for the construction of large data bases within information systems A file design system is developed here that can be used by a file designer to select good file organizations from a large number of alternatives This design system takes its design requirement parameters from the data collection user activities and machine characteristics The output of the design system is a suggested file structure and the details of the actual file structure can be determined by simulation or other techniques
