Film audiences

Bridgette Wessels, Peter Merrington, Matthew Hanchard, David Forrest, 2022-12-20 Reception studies have made film audiences increasingly visible while surveys track trends and policymakers gather information about audience preferences and demographics. But little attention has been paid to the specific contextual relationships and interactions between films and individuals that generate and sustain audiences. This monograph develops the idea of audiences as interactive and relational, introducing three innovative concepts: personal film journeys, five types of audience formations, and five geographies of film provision. A major challenge of audience research is how to capture the richness of people's social and cultural engagement with film. To achieve this, the book uses an innovative mixed methods research and computational ontology. It develops ground-breaking theory and concepts and an innovative methodology based on an extensive data set derived from the under-researched area of British regional film audiences.

Fundamental Aspects of Corrosion Films in Corrosion Science B.D. Craig, 2013-06-29 The purpose of this book is to stimulate thinking among corrosion scientists and engineers to examine corrosion mechanisms and corrosion control from another perspective While the presence of corrosion films in electrochemical corrosion has been recognized for over a century the contribution of these films to all facets of corrosion has not been explored to a significant degree Rather the role of films in certain mechanisms i.e stress corrosion cracking has been emphasized yet almost ignored for other corrosion mechanisms This is viewed by the author as solely attributable to the lack of investigation into and an understanding of the contribution of films to these mechanisms or forms of attack The lack of emphasis and study of corrosion films and their contribution to all forms of corrosion attack are probably the result of current university instruction that utilizes two popular corrosion texts Uhlig and Fontana and Greene for teaching These texts provide an excellent understanding at the undergraduate level of corrosion fundamentals however the major implicit premise in these texts is that bulk properties of an alloy or metal control the corrosion resistance in a particular environment For many applications and for a simple understanding of corrosion mechanics this approach is sufficient Yet research on corrosion films indicate these films often have an entirely different composition than the bulk metal ratio of alloying elements
