

Premise 2: This reality construction occurs via filters

1. Filters translate quantum imagination into classical reality
2. Three general types of filters: **Somatic, Cognitive, and Field**
3. All we know is what our filters produce: Our maps are our reality
4. We can generatively work with our filters

Filters Of The Imagination

Filters Of The Imagination:

Evolution of Filters Mia Collins, AI, 2025-02-26 *Evolution of Filters* explores how simple glass or gelatin revolutionized photography From early black and white images to modern digital enhancement filters significantly impacted both the technical and artistic aspects of photography Early processes lacked tonal nuance but filters enabled photographers to manipulate light crafting more compelling images Some filters work through light absorption refraction and polarization demonstrating how optical principles are essential to filter technology The book chronicles the history of filters their scientific underpinnings and their aesthetic influence Structured chronologically and thematically it begins with light and color basics progressing through black and white filters color filters including graduated neutral density and polarizing filters and culminating in digital filters Examining patents equipment catalogs and case studies of renowned photographers the book uniquely blends technical explanations with artistic analysis making it invaluable for enthusiasts and professionals seeking a deeper understanding of image manipulation

Visuality for Architects Branko Mitrovic, 2013-05-22 What is more important in architectural works their form shape and color or the meanings and symbolism that can be associated with them Can aesthetic judgments of architecture be independent of the stories one can tell about buildings Do non architects perceive buildings in the same way as do architects For the greater part of the twentieth century it was common to respond to these and similar questions by relying on psychological theories asserting there is no innocent eye that we think only in language and that human visuality results from preexisting conceptual knowledge Dramatic breakthroughs in philosophy and psychology over the past two decades however have shown us that human visuality functions for the most part independently of conceptual thinking and language This book examines the ways in which new theories of human visuality create a different understanding of architectural design practice and education This new understanding coincides with and supports formalist approaches to architecture that have become influential in recent years as a result of the digital revolution in architectural design

Machine Intelligence and the Imaginal Realm Luke Lafitte,2022-02-01 Explores how we naturally project consciousness onto machines and how this is reflected in human culture science artificial intelligence and literature Demonstrates a direct connection between consciousness and the history of machines in American history Looks at the contributions and influence of Grace Hopper Richard Feynman Philip K Dick Nikola Tesla Thomas Edison Elon Musk David Bohm Norbert Wiener and Steve Jobs as well as the Nag Hammadi Gnostic gospels Humans invented and constructed machines to aid them as far back as the Stone Age As the machines became more complex they became extensions of the body and mind and we naturally began projecting consciousness onto them As Luke

Lafitte shows in detail although machines complicate the already complicated issue of identity because they are ours and of us they are part of our spiritual development In this sweeping exploration of the history of the machine as a tool as a transpersonal object to assist human activity and as a transitional artifact between spirits and the humans who interact with them Lafitte examines the role that machines play in the struggle between spiritual man and mechanical man throughout history He interprets the messages archetypes and language of the unconscious in the first popular stories related to mechanical men and he demonstrates a direct connection between consciousness and the history of machines in American history specifically between the inventors of these machines and the awakening of our imaginations and our powers of manifestation He examines the influence of Philip K Dick Nikola Tesla Thomas Edison Grace Hopper Richard Feynman Elon Musk David Bohm and others and shows how the Nag Hammadi gospels explain how we can take back our myth and spirit from the machine Although the term mechanical man is a catch all phrase Lafitte shows that the term is also a meeting ground where extra dimensional communications between different forms of matter occur Every machine android robot and cyborg arose from consciousness and these mechanical men whether real or fictive offer us an opportunity to free ourselves from enslavement to materialism and awaken our imaginations to create our own realities

Captured Futures Maarten A. Hajer, Jeroen Oomen, 2025-07-23 Environmental politics as we know it cannot deliver Despite all efforts politics is unable to bend the ecological trends Maarten A Hajer and Jeroen Oomen argue that this is because environmental politics is captured This capture doesn't just express itself in lobbying or a lack of political will but in a capture of the imagination we seem unable to imagine futures that are meaningfully different from the present Examining environmental politics as drama reveals how all actors play their particular roles in this capture scientists funnel narrow policy futures through their models activists adopt politically expedient language and policymakers look for safe technologically sound win win solutions All are captured in a

regime of ecological modernization that entertains too narrow a solution space For Hajer and Oomen this is cause for concern we have entered a radical age in which persistent policy failure leads to increased suggestions to engage with speculative geoengineering technologies in a desperate attempt to safeguard the future On the other hand they point at the growing societal backlash against environmental policies Yet in the third part of the book discourse and dramaturgical analysis appear as a reason for hope sketching an alternative perspective on environmental politics It suggests that a new more cultural approach to environmental politics could have more leverage on the societal imagination Combining this with the formulation of new discourses and using alternative dramaturgies of change Captured Futures highlights how to find more effective and more inspiring ideas about how to approach the future and ultimately liberate environmental politics
