seconds to make one binary comparison between two pens Given this slow speed sublinear algorithms are considered tractable for an unaided human and this defines Simon s concept of bounded rationality Humans make simplifications to solve the intractable consumer optimization problem Consumers search for goods and services item by item which greatly reduces the number of alternatives to consider In addition consumers have operators that can process a set in a single operation Also consumers budget by incremental adjustment In considering consumer performance the question to ask is how close to optimal is consumer performance and not whether consumers optimize as a yes no question Given the ordinal nature of utility theory this creates a basic measurement problem The book presents a review of the literature on consumer performance This is an opportune time to study consumer procedures because the Internet provides a media to make substantial improvements in consumer performance The book includes a case study comparing the performance of a digital camera selection code with the advice of sales people A field experiment demonstrates that the software code provides better advice
