Care Financing with an Application to Zaire* Ricardo A. Bitran, 1994 Describes a computer model to aid decisionmakers in the  
health services field in developing countries As developing countries increasingly depend on user fees to finance health care  
services decisionmakers in those countries face the difficult task of developing and implementing cost recovery systems In  
recent years health economists have developed computer models to aid in such analyses This paper contains a user friendly  
computer model on a 3A diskette which combines information about demand and supply for health care obtained through  
surveys undertaken in Zaire It allows the user to enter data from other settings and to simulate various changes in health  
care financing under a broad range of circumstances The computer model is provided as a tool for users to assess the impact  
of health financing policies on health care use and health facility financial performance The model has been developed in  
Lotus 1 2 3 and is contained in four spreadsheet files that can be run on any IBM compatible microcomputer with at least 640  
kilobytes of RAM memory The paper explains in detail the assumptions and theory behind the model and presents numerous  
simulations to illustrate how the model can be used The capabilities and limitations are also outlined along with a summary
