This handbook analyzes and develops methods and models to optimize solutions for energy access for industry and the general world population alike in terms of reliability and sustainability With a focus on improving the performance of energy systems it brings together state of the art research on reliability enhancement intelligent development simulation and optimization as well as sustainable development of energy systems It helps energy stakeholders and professionals learn the methodologies needed to improve the reliability of energy supply and demand systems achieve more efficient long term operations deal with uncertainties in energy systems and reduce energy emissions Highlighting novel models and their applications from leading experts in this important area this book will appeal to researchers students and engineers in the various domains of smart energy systems and encourage them to pursue research and development in this exciting and highly relevant field

Optimal Financial Decision Making under Uncertainty Giorgio Consigli, Daniel Kuhn, Paolo Brandimarte, 2016-10-17

The scope of this volume is primarily to analyze from different methodological perspectives similar valuation and optimization problems arising in financial applications aimed at facilitating a theoretical and computational integration between methods largely regarded as alternatives. Increasingly in recent years financial management problems such as strategic asset allocation, asset liability management as well as asset pricing problems have been presented in the literature adopting formulation and solution approaches rooted in stochastic programming, robust optimization, stochastic dynamic programming including approximate SDP methods as well as policy rule optimization, heuristic approaches and others. The aim of the volume is to facilitate the comprehension of the modeling and methodological potentials of those methods, thus their common assumptions and peculiarities, relying on similar financial problems. The volume will address different valuation problems common in finance related to asset pricing, optimal portfolio management, risk measurement, risk control and asset liability management. The volume features chapters of theoretical and practical relevance, clarifying recent advances in the associated applied field from different standpoints, relying on similar valuation problems and as mentioned, facilitating a mutual and beneficial methodological and theoretical knowledge transfer. The distinctive aspects of the volume can be summarized as follows: Strong benchmarking philosophy with contributors explicitly asked to underline current limits and desirable developments in their areas; Theoretical contributions aimed at advancing the state of the art in the given domain with a clear potential for applications; The inclusion of an algorithmic computational discussion of issues arising on similar valuation problems across different methods; Variety of applications: rarely is it possible within a single volume to consider and analyze different and possibly competing alternative optimization techniques applied to well identified financial valuation problems; Clear definition of the current state of the art in each methodological and applied area to facilitate future research directions.

Financial Decision Aid Using Multiple Criteria Hatem Masri, Blanca Pérez-Gladish, Constantin Zopounidis, 2018-01-17

This volume highlights recent applications of multiple criteria decision making (MCDM) models in the field of finance. Covering a wide range of MCDM approaches including multiobjective optimization, goal programming, value based models, outranking techniques and fuzzy models, it provides researchers and practitioners with a set of MCDM methodologies and empirical results in areas such as portfolio management, investment appraisal, banking and corporate finance among others. The book addresses issues related to problem structuring and modeling, solution techniques, comparative analyses as well as combinations of MCDM models with other analytical methodologies.
