Lake,1999 This 2nd revised edition includes expanded introductory information plus new chapters covering hedge funds and emerging markets convertible arbitrage opportunistic investing investors strategies opportunities and pitfalls risk control techniques and the impact of investment technology American Doctoral Dissertations ,1996 **Aanwinsten van de Centrale Bibliotheek (Queteletfonds)** Bibliothèque centrale (Fonds Quetelet),1990 *Index of Economic Articles in Journals and Collective Volumes* American Economic Association,1996 **The Role of Information Acquisition and Financial Markets in International Macroeconomic Adjustment** Reuven Glick,1986 *Asymmetric Information and Financial Markets* Corrado Benassi,Innocenzo Gasparini Institute for Economic Research,1992 **Asymmetric Information and Financial Markets** Han Nazmi Ozsoylev,2004 **The Role of Informational Asymmetries in Financial Markets and the Real Economy** Victoria Magdalena Vanasco,2014 The stability of national and increasingly more often the global economy relies on well functioning financial markets Households consumption and saving decisions firms investment choices and governments financing strategies critically depend on the stability of financial markets These markets however are composed of individuals and institutions that may have different objectives information sets and beliefs making them a very complex object that we do not fully comprehend Motivated by this my dissertation focuses on understanding how informational asymmetries and belief heterogeneity impact financial markets and therefore the macro economy More specifically this dissertation explores the sources of informational asymmetries among market participants How do different financial market structures provide incentives for private information acquisition Is information acquisition desirable What types of policies can be implemented to increase liquidity and discipline in financial markets Could business cycles be related to information or belief cycles I tackle these questions from three separate angles First I study how alternative market designs bring forth different levels of private information generation market discipline and liquidity Second I investigate how information sets of key market participants are determined Finally I focus on how information and belief fluctuations may

affect key macroeconomic variables and economic fluctuations In Chapter 1 Information Acquisition vs Liquidity in Financial Markets I propose a parsimonious framework to study markets for asset backed securities ABS These markets play an important role in providing lending capacity to the banking industry by allowing banks to sell the cashflows of their loans and thus recycle capital and reduce the riskiness of their portfolios In the financial crash of 2008 however in which certain ABS played a substantial role we witnessed a collapse in the issuance of all ABS classes Given the importance of these markets for the real economy policy makers in the US and Europe have geared their efforts towards reviving them A good framework to think about these markets is imperative when thinking about financial regulation The contribution of this chapter is to propose a model that captures the two main problems that have been shown to be present in the practice of securitization First the increase in securitization has led to a decline in lending standards suggesting that liquid markets for ABS reduce incentives to issue good quality loans Second securitizers have used private information about loan quality when choosing which loans to securitize indicating that a problem of asymmetric information is present in ABS markets A natural question then arises how should ABS be designed to provide incentives to issue good quality loans and at the same time to preserve liquidity and trade in these markets To address this question I propose a framework to study ABS where both incentives and liquidity issues are considered and linked through a loan issuer's information acquisition decision Loan issuers acquire private information about potential borrowers use this information to screen loans and later design and sell securities backed by these loans when in need of funds While information is beneficial ex ante when used to screen loans it becomes detrimental ex post because it introduces a problem of adverse selection that hinders trade in ABS markets The model matches key features of these markets such as the issuance of senior and junior tranches and it predicts that when gains from trade in ABS markets are sufficiently large information acquisition and loan screening are inefficiently low There are two channels that drive this inefficiency First when gains from trade are large a loan issuer is tempted ex post to sell a large portion of its cashflows and thus does not internalize that lower retention implements less information acquisition Second the presence of adverse selection in secondary markets creates informational rents for issuers holding low quality loans reducing the value of loan screening This suggests that incentives for loan screening not only depend on the portion of loans retained by issuers but also on how the market prices the issued tranches Turning to financial regulation I characterize the optimal mechanism and show that it can be implemented with a simple tax scheme The obtained results therefore contribute to the recent debate on how to regulate markets for ABS In Chapter 2 I present joint work with Matthew Botsch Learning by Lending Do Banks Learn where we investigate how banks form their information sets about the quality of their borrowers There is a vast empirical and theoretical literature that points to the importance of borrower lender relationships for firms access to credit In this chapter we investigate one particular mechanism through which long term relationships might improve access to credit We hypothesize that while lending to a firm a bank receives signals that allow it to learn and better

understand the firm's fundamentals and that this learning is private that is it is information that is not fully reflected in publicly observable variables We test this hypothesis using a dataset for 7 618 syndicated loans made between 1987 and 2003 We construct a variable that proxies for firm quality and is unobservable by the bank so it cannot be priced when the firm enters our sample We show that the loading on this factor in the pricing equation increases with relationship time hinting that banks are able to learn about firm quality when they are in an established relationship with the firm Our finding is robust to controlling for market wide learning about firm fundamentals This suggests that a significant portion of bank learning is private and is not shared by all market participants The results obtained in this study underpin one of the main assumptions of the model presented in Chapter 1 that banks have a special ability to privately acquire valuable information about potential borrowers While the model is static the data suggests that the process of lending and of information acquisition is a dynamic one Consistent with this the last chapter of this dissertation studies the macroeconomic implications of dynamic learning by financial intermediaries Chapter 3 presents joint work with Vladimir Asriyan titled Informed Intermediation over the Cycle In this paper we construct a dynamic model of financial intermediation in which changes in the information held by financial intermediaries generate asymmetric credit cycles as the one observed in the data We model financial intermediaries as expert agents who have a unique ability to acquire information about firm fundamentals While the level of expertise in the economy grows in tandem with information that the experts possess the gains from intermediation are hindered by informational asymmetries We find the optimal financial contracts and show that the economy inherits not only the dynamic nature of information flow but also the interaction of information with the contractual setting We introduce a cyclical component to information by supposing that the fundamentals about which experts acquire information are stochastic While persistence of fundamentals is essential for information to be valuable their randomness acts as an opposing force and diminishes the value of expert learning Our setting then features economic fluctuations due to waves of confidence in the intermediaries ability to allocate funds profitably

Essays on Financial Markets with Asymmetric Information Robert Lee Heinkel, 1978

The Economics of Over-the-Counter Markets Julien Hugonnier, Benjamin Lester, Pierre-Olivier Weill, 2025-05-13 An essential primer on an important yet understudied type of financial market Many of the largest financial markets in the world do not organize trade through an exchange but rather operate within a decentralized or over the counter OTC structure Understanding how these markets work has become increasingly important in recent years as illiquidity in certain OTC markets has appeared as the first signs of trouble if not the cause itself of the past two financial crises However standard models of financial markets are not suitable for studying the causes of illiquidity in OTC markets nor the optimal policy response The Economics of Over the Counter Markets proposes a unified search theoretic framework designed to explicitly capture the key features of OTC markets confront the growing set of stylized facts from these markets and provide guidance for policies designed to promote liquidity and resiliency This incisive book covers empirical regularities

that are common across OTC markets develops the methodological tools to analyze the benchmark theoretical models in the academic literature and extends these models to confront the latest issues facing these markets Covers a broad range of topics including asset pricing liquidity transaction costs asymmetric information financial crises and market design An ideal textbook for graduate students in economics and finance An invaluable resource for policymakers seeking a framework to assess the impact of new developments in fixed income and short term funding markets

The Processing and Pricing of Macroeconomic Information in Financial Markets Kristian Dicke, Verlag Dr. Kovač, 2012

Asymmetric Information and Macroeconomic Dynamics Raymond J. Hawkins, Masanao Aoki, B. Roy Frieden, 2011 We show how macroeconomic dynamics can be derived from asymmetric information As an illustration of the utility of this approach we derive the equilibrium density non equilibrium densities and the equation of motion for the response to a demand shock for productivity in a simple economy Novel consequences of this approach include a natural incorporation of time dependence into macroeconomics and a common information theoretic basis for economics and other fields seeking to link micro dynamics and macro observables

Essays on Informational Frictions in Macroeconomics and Finance Jennifer La'O, 2010 This dissertation consists of four chapters analyzing the effects of heterogeneous and asymmetric information in macroeconomic and financial settings with an emphasis on short run fluctuations Within these chapters I study the implications these informational frictions may have for the behavior of firms and financial institutions over the business cycle and during crises episodes The first chapter examines how collateral constraints on firm level investment introduce a powerful two way feedback between the financial market and the real economy On one hand real economic activity forms the basis for asset dividends On the other hand asset prices affect collateral value which in turn determines the ability of firms to invest In this chapter I show how this two way feedback can generate significant expectations driven fluctuations in asset prices and macroeconomic outcomes when information is dispersed In particular I study the implications of this two way feedback within a micro founded business cycle economy in which agents are imperfectly and heterogeneously informed about the underlying economic fundamentals I then show how tighter collateral constraints mitigate the impact of productivity shocks on equilibrium output and asset prices but amplify the impact of noise by which I mean common errors in expectations Noise can thus be an important source of asset price volatility and business cycle fluctuations when collateral constraints are tight The second chapter is based on joint work with George Marios Angeletos In this chapter we investigate a real business cycle economy that features dispersed information about underlying aggregate productivity shocks taste shocks and potentially shocks to monopoly power We show how the dispersion of information can i contribute to significant inertia in the response of macroeconomic outcomes to such shocks ii induce a negative short run response of employment to productivity shocks iii imply that productivity shocks explain only a small fraction of high frequency fluctuations iv contribute to significant noise in the business cycle v formalize a certain type of demand shocks within an RBC economy and vi generate cyclical variation in

observed Solow residuals and labor wedges. Importantly, none of these properties requires significant uncertainty about the underlying fundamentals; they rest on the heterogeneity of information and the strength of trade linkages in the economy, not the level of uncertainty. Finally, none of these properties are symptoms of inefficiency apart from undoing monopoly distortions or providing the agents with more information; no policy intervention can improve upon the equilibrium allocations. The third chapter is also based on joint work with George Marios Angeletos. This chapter investigates how incomplete information affects the response of prices to nominal shocks. Our baseline model is a variant of the Calvo model in which firms observe the underlying nominal shocks with noise. In this model, the response of prices is pinned down by three parameters: the precision of available information about the nominal shock, the frequency of price adjustment, and the degree of strategic complementarity in pricing decisions. This result synthesizes the broader lessons of the pertinent literature. However, this synthesis provides only a partial view of the role of incomplete information: once one allows for more general information structures than those used in previous work, one cannot quantify the degree of price inertia without additional information about the dynamics of higher-order beliefs or of the agents' forecasts of inflation. We highlight this with three extensions of our baseline model, all of which break the tight connection between the precision of information and higher-order beliefs featured in previous work. Finally, the fourth chapter studies how predatory trading affects the ability of banks and large trading institutions to raise capital in times of temporary financial distress in an environment in which traders are asymmetrically informed about each others' balance sheets. Predatory trading is a strategy in which a trader can profit by trading against another trader's position, driving an otherwise solvent but distressed trader into insolvency. The predator, however, must be sufficiently informed of the distressed trader's balance sheet in order to exploit this position. I find that when a distressed trader is more informed than other traders about his own balances, searching for extra capital from lenders can become a signal of financial need, thereby opening the door for predatory trading and possible insolvency. Thus, a trader who would otherwise seek to recapitalize is reluctant to search for extra capital in the presence of potential predators. Predatory trading may therefore make it exceedingly difficult for banks and financial institutions to raise credit in times of temporary financial distress.

Testing Financial Market Equilibrium Under Asymmetric Information Georg Nöldeke, 1994

Asymmetric Information and Financial Markets G. Manjunatha, 2023-06-10. This econometric analysis focuses on the relationship between asymmetric information and financial markets. The study aims to examine how the presence of asymmetric information affects market dynamics and outcomes. By utilizing advanced statistical techniques and econometric modeling, the research investigates the impact of information asymmetry on various financial market variables. The study analyzes the role of information asymmetry in influencing market efficiency, price formation, trading volume, and investor behavior. It explores how differences in information between market participants lead to market inefficiencies, such as mispricing and suboptimal trading strategies. Additionally, the research investigates the implications of asymmetric

information for market liquidity volatility and the overall stability of financial markets Through the econometric analysis the study provides empirical evidence and insights into the effects of asymmetric information on financial markets It aims to contribute to the existing literature by shedding light on the mechanisms through which information asymmetry influences market dynamics and outcomes The findings have practical implications for investors financial institutions and policymakers helping to enhance market transparency investor protection and the efficiency of financial markets Overall this econometric analysis delves into the relationship between asymmetric information and financial markets By employing rigorous statistical techniques it aims to understand the impact of information asymmetry on market variables providing valuable insights for market participants and stakeholders The research ultimately seeks to contribute to the understanding of market dynamics and inform strategies to mitigate the adverse effects of information asymmetry in financial markets
