Financial Structures and Economic Outcomes Mr.Tom Gole,Tao Sun,2013-05-22 This paper investigates the potential relationships between financial structures and economic outcomes The empirical results that withstand a battery of methods suggest that some financial intermediation structures are likely to be more closely related to positive economic outcomes than others For instance protective financial buffers within institutions have been associated with better economic

performance and a domestic financial system that is dominated by some types of nontraditional bank intermediation or that has a high proportion of foreign banks has in some cases been associated with adverse economic outcomes especially during the financial crisis The results also suggest that there may be trade offs between beneficial effects on growth and stability of some financial structures For example the positive association of financial buffers with growth can diminish above a certain relatively high threshold a too safe system may limit the available funds for credit and hence growth Financial Structure

Joseph P. Byrne, E. Philip Davis, 2003-08-28 Differences in financial structure result in contrasting financing and economic behavior This book confronts theory and empirical research with aggregate financial data across the G7 spanning 1970 through 2000 It compares the contrasting patterns and development of financial structures with the main theoretical and empirical results in economic literature The resulting data analysis traces portfolios over a turbulent period characterized by considerable economic and financial instability marked financial liberalization far reaching technical change and volatile asset prices *Financial Structure and Economic Development*, 2000 **Financial Structure and Economic**

Organization Robert M. Townsend, 1990 This volume focuses on how groups of economic agents organize themselves with a special interest in the financial arrangements they adopt This is achieved primarily through the development and refinement of neoclassical models incorporating transactions costs and impediments to trade but also through parallels with the organization of real economies drawn from the history of early Europe The author demonstrates that the key elements determining financial structure and economic organization in history are key features in the described environments of modern economic models These include the facts that economic agents are separated in time and space economic life is full of uncertainty there is often private information among agents there are sometimes difficulties of communication among agents and there can be problems in getting agents to commit to arrangements the difficulties of costly and limited enforcement Analyzing these central issues both in theory and in history Professor Townsend makes a highly original contribution to the understanding of the diverse forms of economic and financial organization *Financial Structure and Economic Development* Vojislav Maksimovic, 2016 A country's level of fina Financial Development, Financial Structure and Economic Growth Ioannis Alexios Mergos, 2004 **Economic Uncertainty and Financial Structure** Alexander Thomas Kingdom Grant, 1977 *Financial Structure and Economic Development in Africa* Mukwanason Hyuha, 1983

Financial Structure and Economic Growth in Advanced Countries Raymond William Goldsmith, 1953 A New Database on Financial Development and Structure Thorsten Beck, 2016 This new database of indicators of financial development and structure across countries and over time unites a range of indicators that measure the size activity and efficiency of financial intermediaries and markets Beck Demircug Kunt and Levine introduce a new database of indicators of financial development and structure across countries and over time This database is unique in that it unites a variety of indicators that measure the size activity and efficiency of financial intermediaries and markets It improves on previous efforts by presenting data on the

public share of commercial banks by introducing indicators of the size and activity of nonbank financial institutions and by presenting measures of the size of bond and primary equity markets The compiled data permit the construction of financial structure indicators to measure whether for example a country's banks are larger more active and more efficient than its stock markets These indicators can then be used to investigate the empirical link between the legal regulatory and policy environment and indicators of financial structure They can also be used to analyze the implications of financial structure for economic growth Beck Demirguc Kunt and Levine describe the sources and construction of and the intuition behind different indicators and present descriptive statistics This paper a product of Finance Development Research Group is part of a broader effort in the group to understand the determinants of financial structure and its importance to economic development The authors may be contacted at tbeck@worldbank.org ademirguckunt@worldbank.org or rlevine@csom.umn.edu

Financial Structure and Economic Growth Nexus Revisited Lan Chu Khanh, 2019 This paper empirically reassesses the long debated relationship between financial structure and economic growth Specifically we examine whether the effect of financial structure on economic growth is affected by the financial structure disproportion banking crisis economic volatility and level of financial development We employ the generalized method of moments estimation to a large panel of 100 countries over the 1971-2015 period Although the main result supports market based view the positive effect of stock market development relative to banking system decreases significantly if financial structure is unbalanced Our findings are robust to a variety of sensitivity check including different measures of financial structure periods and model specifications
