combinations of these colors constituting common varieties They typically have dark brown or black markings on their backs and wings These finches are renowned for their tranquil and sociable behavior When kept in pairs or small groups they prosper and they are typically not aggressive toward other finches These birds are active and enjoy flying hopping and investigating their environment Society Finches are not known for their melodious singing like other species of finches They instead emit a succession of soft monotonous chirping sounds Society Finches are relatively simple to care for and an excellent choice for beginning aviculturists those who keep and breed birds They require a cage or aviary that is clean spacious and equipped with perches and nesting chambers They will remain healthy on a diet of finch seed blend fresh water and occasional treats of fruits and vegetables These finches are prolific breeders and can produce multiple eggs per year They construct their nests using materials from their enclosure such as sticks feathers and nesting material It is crucial to monitor the breeding process as animals may produce too many eggs resulting in overpopulation and potential health problems Lifespan Society Finches have a relatively short lifespan of about 5 to 7 years although with appropriate care some may live longer Society Finches are frequently maintained for their affable personalities and ease of care rather than their singing abilities Due to their gentle nature and willingness to care for the eggs and young of other species they are occasionally used as surrogate parents for other finch species
