Effects Of Nicotine On Biological Systems:

Effects of Nicotine on Biological Systems Adlkofer, Thureau, 2013-03-08 As part of its scientific activities the German Research Council on Smoking and Health regularly provides opportunities for scientists to discuss progress in the field of nicotine research In this context the Research Council sponsored a Satellite Symposium in Hamburg June 28 30 1990 entitled *Effects of Nicotine on Biological Systems* This meeting was held in conjunction with the XIth International Congress of Pharmacology in Amsterdam and follows the first Satellite Symposium on Nicotine which was convened in Brisbane Australia in 1987 The aim of these conferences has been to discuss state of the art research on the pharmacology and toxicology of nicotine and its metabolites and to integrate this information to help define nicotinic actions on the central and peripheral nervous system as well as to evaluate health or behavioral effects associated with use of this alkaloid Furthermore at this conference potential therapeutic benefits of nicotine for certain disease states were discussed Smoking and the health effects of smoking were dealt with only as far as they could not be separated from the effects of nicotine This volume contains the lectures presented at the symposium and illustrates that knowledge of nicotine has advanced considerably in recent years with regard to mechanisms of its actions Despite such progress however it is apparent that a large number of questions remain unanswered especially in the light of new insight into cellular and molecular mechanisms which can be affected by nicotine

Nicotine and Related Alkaloids J.W. Gorrod,J. Wahren,2012-12-06 Nicotine is an alkaloid which is present together with a number of minor alkaloids in tobacco and a wide variety of other plants The introduction of tobacco as a therapeutic agent against diverse pathologi cal and physiological conditions resulted in the widespread exposure of people to nicotine and the subsequent recognition of the pleasurable effects of tobacco consumption Tobacco may be used for pleasure by smoking it in pipes cigars or cigarettes or by taking it in unsmoked form as oral and nasal tobacco snuff Nonsmokers are exposed to nico tine through plant material and side stream tobacco smoke This means that in humans nicotine is always utilized in the presence of a very large variety of natural compounds or their pyrolysis products depend ing on the route of administration These compounds may modify the absorption distribution metabolism and excretion of nicotine and hence alter the duration of its pharmacological action In recent years the use of nicotine in chewing gum and cutaneous patches has been developed as an aid to smoking cessation The toxic properties of nicotine make it useful as an insecticide which has led to its use in agriculture and horticulture It has also recently been recog nized that tobacco consumption may be beneficial in the prevention of Parkinson s disease or in alleviating inflammatory bowel syndrome The above observations have continued to stimulate research into the mode of action of this relatively simple molecule
