*The Complete Technology Book on Industrial Adhesives* NPCB Board of Consultants & Engineers, 2008-10-01 Adhesives were utilized in a sophisticated manner even in ancient times Recent years have seen the rapid development of adhesive bonding as an economic and effective method for the fabrication of components and assemblies The great many types of adhesives are currently in use and there is no adequate single system of classification for all products The adhesives industry has generally employed classifications based on end use such as metal to metal adhesives wood adhesives general purpose adhesives paper and packaging adhesives etc An adhesive or formulation is generally a mixture of several materials The extent of mixture and the ratio usually depend upon the properties desired in the final bonded joint The basic materials may be defined as those substances which provide the necessary adhesive and binding properties The type of adhesive material is easier to define and usually falls into three categories thermosetting resins thermoplastic resins and elastomeric resins A thermosetting system 100 percent reactive when in a pure state the epoxies are very desirable and more widely used than any other chemical type Epoxy is one of the newer types and has penetrated more fields of manufacturing operations in a shorter space of time than any of its predecessors The many catalysts used with epoxies produce systems of variable properties The most common are the aromatic amines and cyclic anhydrides The phenolics or phenol formaldehyde resins are formed by the condensation reaction of phenol and formaldehyde The phenolic resins have been used extensively in the lamination of plywood and in filament wound structures There are two basic classes of phenolic resins resoles and novolacs and both begin as phenol alcohols When combined or alloyed with other adhesive systems they become excellent structural adhesives and are widely used in this manner throughout the aerospace industry The vinyl polymers do not stand alone as a structural adhesive but hundreds of adhesives are formulated by the use of this class of polymer The vinyls are important to adhesive bonding not only from the adhesive standpoint but because the films derived from these substances are widely used as vacuum bags slip sheets etc The more widely used ones are polyvinyl chloride polyvinyl alcohol and polyvinyl fluoride There are numerous kinds of adhesives used in different industries polyvinyl acetate wood adhesives aminoresin wood
