The Paleobiological Revolution David Sepkoski, Michael Ruse, 2015-03-04 The Paleobiological Revolution chronicles the incredible ascendance of the once maligned science of paleontology to the vanguard of a field With the establishment of the modern synthesis in the 1940s and the pioneering work of George Gaylord Simpson Ernst Mayr and Theodosius Dobzhansky as well as the subsequent efforts of Stephen Jay Gould David Raup and James Valentine paleontology became embedded in biology and emerged as paleobiology a first rate discipline central to evolutionary studies Pairing contributions from some of the leading actors of the transformation with overviews from historians and philosophers of science the essays here capture the excitement of the seismic changes in the discipline In so doing David Sepkoski and Michael Ruse harness the energy of the past to call for further study of the conceptual development of modern paleobiology

Major Events in the History of Life J. William Schopf, 1992 Major Events in the History of Life present six chapters that summarize our understanding of crucial events that shaped the development of the earth s environment and the course

of biological evolution over some four billion years of geological time The subjects are covered by acknowledged leaders in their fields span an enormous sweep of biologic history from the formation of planet Earth and the origin of living systems to our earliest records of human activity Several chapters present new data and new syntheses or summarized results of new types of analysis material not usually available in current college textbooks **Bringing Fossils to Life** Donald R. Prothero, 2013-11-12 The leading textbook in its field this work applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla It incorporates current research from biology ecology and population genetics Written for biology and geology undergrads the text bridges the gap between purely theoretical paleobiology and solely descriptive invertebrate paleobiology books emphasizing the cataloguing of live organisms over dead objects This third edition revises art and research throughout expands the coverage of invertebrates includes a discussion of new methodologies and adds a chapter on the origin and early evolution of life *The Rise of Animals* Mikhail A. Fedonkin, 2007 An essential resource for paleontologists biologists geologists and teachers The Rise of Animals is the best single reference on one of earth's most significant events **The Genesis Enigma** Andrew Parker, 2009-10-08 An acclaimed paradigm shifting evolutionary biologist shows how the biblical story of Genesis uncannily reflects recent scientific discoveries and finds room for divine inspiration within Consider this Genesis recounts the story of creation step by step Let there be light Let the waters under the heaven be gathered together into one place and let the dry land appear Let the earth bring forth vegetation Let the waters bring forth abundantly the moving creature that hath life God created the whales And God created every winged fowl For thousands of years Judeo Christian belief has accepted this progression as truth And now thanks to recent scientific discoveries the scientific community does too though without the mention of God In The Genesis Enigma respected evolutionary biologist Andrew Parker explains each parallel between Genesis and science in detail and the closer he looks the more amazing the parallels become But the Genesis account has no right to be correct The author or authors could not have known these things happened in this order and with the highlights science has come to recognize Ultimately Parker argues it must be divine inspiration that guided the writing of the Bible This startling conclusion will make The Genesis Enigma a must read for believers and scientists alike **The Rise and Fall of the Ediacaran Biota** Patricia Vickers-Rich, Patricia Komarower, 2007 The Proterozoic and early Phanerozoic was a time punctuated by a series of significant events in Earth history Glaciations of global scale wracked the planet interfingered with dramatic changes in oceanic and atmospheric chemistry and marked changes in continental configuration It was during these dynamic and weedy times that metazoans first appeared diversified culminating in the appearance of hard tissue skeletons and deep farming of the marine substrate in late Proterozoic and first few millions of years of the Phanerozoic This book is the culmination of two symposia of UNESCO International Geological Correlation Project 493 one in Prato Italy in 2004 the second in Kyoto Japan in 2006 Both dealt specifically with the precise timing of physical events and teasing out of the effects which these changing

environments climates global chemistry and palaeogeography had on the development and diversification of animals culminating in the spectacular Ediacaran Vendian faunas of the late Precambrian

The Zoologist's Guide to the Galaxy Arik Kershenbaum, 2022-03-15 A wildly fun and scientifically sound exploration of what alien life must be like Scientists are confident that life exists elsewhere in the universe Yet rather than taking a realistic approach to what aliens might be like we imagine that life on other planets is the stuff of science fiction The time has come to abandon our fantasies of space invaders and movie monsters and place our expectations on solid scientific footing Using his own expert understanding of life on Earth and Darwin's theory of evolution which applies throughout the universe Cambridge zoologist Dr Arik Kershenbaum explains what alien life must be like how these creatures will move socialize and communicate Might there be an alien planet with supersonic animals A moon where creatures have a language composed of smells Will aliens scream with fear act honestly or have technology The Zoologist's Guide to the Galaxy answers these questions using the latest science to tell the story of how life really works on Earth and in space

Evolution Donald R. Prothero, 2017-08-22 Donald R Prothero's Evolution is an entertaining and rigorous history of the transitional forms and series found in the fossil record Its engaging narrative of scientific discovery and well grounded analysis has led to the book's widespread adoption in courses that teach the nature and value of fossil evidence for evolution Evolution tackles systematics and cladistics rock dating neo Darwinism and macroevolution It includes extensive coverage of the primordial soup invertebrate transitions the development of the backbone the reign of the dinosaurs and the transformation from early hominid to modern human The book also details the many alleged missing links in the fossil record including some of the most recent discoveries that flesh out the fossil timeline and the evolutionary process In this second edition Prothero describes new transitional fossils from various periods vividly depicting such bizarre creatures as the Odontochelys or the turtle on the half shell fossil snakes with legs and the Frogamander a new example of amphibian transition Prothero's discussion of intelligent design arguments includes more historical examples and careful examination of the experiments and observations that are exploited by creationists seeking to undermine sound science education With new perspectives Prothero reframes creationism as a case study in denialism and pseudoscience rather than a field with its own intellectual dynamism The first edition was hailed as an exemplary exploration of the fossil evidence for evolution and this second edition will be welcome in the libraries of scholars teachers and general readers who stand up for sound science in this post truth era

Palaeoecology P.J. Brenchley, D.A.T Harper, 2023-07-14 The first palaeoecology book to focus on evolutionary palaeoecology in both marine and terrestrial environments Discusses reconstruction of the past ecological world at population community and biogeographic levels A well illustrated and substantial volume giving accessible coverage of the full range of subjects within palaeoecology Reviews and summarises all the major mass extinctions

Paleoecology David J. Bottjer, 2016-02-09 Paleoecology is a discipline that uses evidence from fossils to provide an understanding of ancient environments and the ecological history of life through geological time

This text covers the fundamental approaches that have provided the foundation for present paleoecological understanding and outlines new research areas in paleoecology for managing future environmental and ecological change. Topics include the use of actualism in paleoecology, development of paleoecological models for paleoenvironmental reconstruction, taphonomy and exceptional fossil preservation, evolutionary paleoecology and ecological change through time and conservation paleoecology. Data from studies of invertebrates, vertebrates, plants and microfossils with added emphasis on bioturbation and microbial sedimentary structures are discussed. Examples from marine and terrestrial environments are covered with a particular focus on periods of great ecological change such as the Precambrian-Cambrian transition and intervals of mass extinction. Readership: This book is designed for advanced undergraduates and beginning graduate students in the earth and biological sciences as well as researchers and applied scientists in a range of related disciplines.

Earth's Evolving Systems Ronald E. Martin, 2016-12-16. *Earth's Evolving Systems: The History of Planet Earth* Second Edition is an introductory text designed for popular courses in undergraduate Earth history. Written from a systems perspective, it provides coverage of the lithosphere, hydrosphere, atmosphere and biosphere and discussion of how those systems interacted over the course of geologic time.

Dynamic Paleontology Mark A.S. McMenamin, 2016-06-10. Using a series of case studies, the book demonstrates the power of dynamic analysis as applied to the fossil record. Written in an engaging and informative style, *Dynamic Paleontology* outlines the best application of quantitative and other tools to critical problems in the paleontological sciences, including such topics as analysis of the Cambrian Explosion and the question regarding the presence of life on Mars. The book considers how we think about certain types of questions and shows how we can refine our approach to analysis right from the beginning of any particular research effort. The analytical tools presented here will have wide application to other fields of knowledge as such; the book represents a major contribution to our deployment of modern scientific method.

Neoproterozoic Geobiology and Paleobiology Shuhai Xiao, Alan J. Kaufman, 2007-05-31. The Neoproterozoic Era, 1000–542 million years ago, is a geological period of dramatic climatic change and important evolutionary innovations. Repeated glaciations of unusual magnitude occurred throughout this tumultuous interval, and various eukaryotic clades independently achieved multicellularity, becoming more complex, abundant and diverse at its termination. Animals made their first debut in the Neoproterozoic too. The intricate interaction among these geological and biological events is a centrepiece of Earth system history and has been the focus of geobiological investigations in recent decades. The purpose of this volume is to present a sample of views and visions among some of the growing numbers of Neoproterozoic workers. The contributions represent a cross section of recent insights into the field of Neoproterozoic geobiology. Chapter One by Porter gives an up-to-date review of Proterozoic heterotrophic eukaryotes, including fungi and various protists. Heterotrophs are key players in Phanerozoic ecosystems; indeed, most Phanerozoic paleontologists work on fossil heterotrophs. However, the fossil record of Proterozoic heterotrophs is extremely meagre.

Deep Time Analysis Mark A.S. McMenamin, 2018-03-14. Using a series of

case studies the book demonstrates the power of dynamic analysis as applied to the fossil record The book considers how we think about certain types of paleontological questions and shows how to answer them The analytical tools presented here will have wide application to other fields of knowledge as such the book represents a major contribution to the deployment of modern scientific method as it builds on author s previous book *Dynamic Paleontology* Students and seasoned professionals alike will find this book to be of great utility for refining their approach to their ongoing and future research projects

A New History of Life Peter Ward, Joe Kirschvink, 2015-01-01 Charles Darwin s theories first published more than 150 years ago still set the paradigm of how we understand the evolution of life but scientific advances of recent decades have radically altered that Now two pioneering scientists draw on their years of experience in paleontology biology chemistry and astrobiology to deliver an eye opening narrative using a generation s worth of insights culled from new research Writing with zest humor and clarity Ward and Kirschvink show that many of our long held beliefs about the history of life are wrong Three central themes emerge First Ward and Kirschvink argue that catastrophe shaped life s history more than all other forces combined from notorious events like the sudden extinction of dinosaurs to the recently discovered Snowball Earth and the Great Oxygenation Event Second life consists of carbon but oxygen carbon dioxide and hydrogen sulfide determined how it evolved Third ever since Darwin we have thought of evolution in terms of species Yet it is the evolution of ecosystems from deep ocean vents to rainforests that has formed the living world as we know it Ward and Kirschvink tell a story of life on Earth that is at once fabulous and familiar And in a provocative coda they assemble discoveries from the latest cutting edge research to imagine how the history of life might unfold deep into the future

Other Minds Peter Godfrey-Smith, 2016-12-06 A leading philosopher of science discusses the evolution of the cephalopod mind shares photos of cephalopod encounters taken during his advanced scuba dives and offers insights into how nature became self aware
