(Translated by George Hanna. [With a Portrait.]. graf Aleksey Nikolayevich Tolstoy, George H. HANNA, 1955 **The Garin Death Ray** graf Aleksey Nikolayevich Tolstoy, 1961 The Garin Death Ray Alexei Tolstoy, 2001-03-01 Engineer Garin and His Death Ray graf Aleksey Nikolayevich Tolstoy, 1987 Garin inventor of a powerful death ray also aims at subjugating the majority of the world's population by means of a little operation to their brains which will make slaves of them willing to work like beasts of burden for their food alone so that the chosen few the patricians might live a life of pleasure Page 4 of cover **Engineer garin & his death ray** ALEXEI. TOLSTOY, 1987 **The Garin Death Ray, by Alexei Tolstoi. Translated from the Russian by G. Hanna** Aleksey Nikolayevich Tolstoy (Graf), 1980 **Wonderlands of the Avant-Garde** Julia Vaingurt, 2013-05-31 In postrevolutionary Russia as the Soviet government was initiating a program of rapid industrialization avant garde artists declared their intent to serve the nascent state and to transform life in accordance with their aesthetic designs In spite of their professed utilitarianism however most avant gardists created works that can hardly be regarded as practical instruments of societal transformation Exploring this paradox Vaingurt claims that the artists investment of technology with aesthetics prevented their creations from being fully conscripted into the arsenal of political hegemony The purposes of avant garde technologies she contends are contemplative rather than constructive Looking at Meyerhold's theater Tatlin's and Khlebnikov's architectural designs Mayakovsky's writings and other works from the period Vaingurt offers an innovative reading of an exceptionally complex moment in the formation of Soviet culture **How the Laser Happened** Charles H. Townes, 2002-02-28 In *How the Laser Happened* Nobel laureate Charles Townes provides a highly personal look at some of the leading events in twentieth century physics Townes was inventor of the maser of which the laser is one example an originator of spectroscopy using microwaves and a pioneer in the study of gas clouds in galaxies and around stars Throughout his career he has also been deeply engaged with issues outside of academic research He worked on applied research projects for Bell Labs served on the board of directors for General Motors and devoted extensive effort to advising the government on science policy and defense This memoir traces his multifaceted career from its beginnings on the family farm in South Carolina Spanning decades of ground breaking research the book provides a hands on description of how working scientists and inventors get their ideas It also gives a behind the scenes look at the scientific community showing how scientists respond to new ideas and how they approach a variety of issues from priority and patents to the social and political implications of their work In addition Townes touches on the sociology of science uncovering some of the traditions

and values that are invisible to an outsider A towering and energetic figure Townes has explored or pioneered most of the roles available to the modern scientist In addition to fundamental research he was actively involved in the practical uses of the laser and in the court cases to defend the patent rights He was a founding member of the Jaxons an influential group of scientists that independently advises the government on defense policy and he played an active part in scientific decisions and policies from the Truman through the Reagan administration This lively memoir packed with first hand accounts and historical anecdotes is an invaluable resource for anyone interested in the history of science and an inspiring example for students considering scientific careers
