History of British Neurology Frank Clifford Rose, 2012. HISTORY OF BRITISH NEUROLOGY by F Clifford Rose. Imperial College School of Medicine, UK. Diseases of the nervous system are a relatively small but vitally important part of medicine. There was no scientific basis for diagnosis or treatment until the seventeenth century when Dr Thomas Willis (1621-1675) and his team tackled anatomy by dissection of the nervous system, physiology by animal experiments and pathology by post mortem analysis. It was Willis who first used the word neurology and his team who were among the founders of the Royal Society. Included in his team were Christopher Wren who, besides being famous as an architect of London's churches, drew the first modern diagram of the human brain. Developments in our knowledge of the nervous system in the following centuries and the unique importance of clinical neurology became globally recognised through the work of Whytt, Heberden, Hughlings Jackson, Gowers and many others. The work and discoveries of these eminent specialists were extended with the introduction of such neurosciences as neurophysiology, neuropathology and neuro-radiology and this is the first comprehensive account of a battle with the unknown by determined practitioners.

Fifty Years of American Neurology Smith Ely Jelliffe, 1998. *Nineteenth-Century Origins of Neuroscientific Concepts* Edwin Clarke, L. S. Jacyna, 1987. This book traces the seminal ideas that emerged in the first half of the nineteenth century when the fundamental concepts of modern neurophysiology and anatomy were formulated in a period of unprecedented scientific discovery.

Surgery Jeffrey Norton, R. Randall Bollinger, Alfred E. Chang, Stephen F. Lowry, 2012-12-06. I had a dream. My dream was to assemble the current and future leaders in surgery and ask them to develop an evidence-based surgical textbook that would provide the reader with the most up-to-date and relevant information on which to base decisions in modern surgical practice. In other words, the dream was to create the best, most comprehensive textbook of surgery. Fortunately, I met Laura Gillan of Springer Verlag New York who had a similar dream. As our editor, she has provided the foundation and structure for this dream. She has made this dream a reality. Because surgery is a highly specialized and diverse discipline with significant complexity, I also needed a commitment from outstanding surgeons to serve as coeditors. I was fortunate to have a diverse group of exceptional young in-spirit, energetic, cutting-edge surgical investigators share in this project and I wish to thank them for their invaluable contribution to this undertaking. The Editorial Board, including Randy Bollinger, Fred Chang, Steve Lowry, Sean Mulvihill, Harvey Pass and Robert Thompson, met for the first time at the American College of Surgeons meeting in Chicago in October 1997. Fig 1. There, this book was conceived. Each of us developed the plan and content for his specific surgical discipline. The common thread is that all decisions and recommendations are based on the best available evidence and that the reader can clearly see the evidence in our evidence-based tables, specifically marked for the reader's reference.
