Ahlbrandt, Ronald R. Charpentier, T.R. Klett, James W. Schmoker, Christopher J. Schenk, Gregory F. Ulmishek, 2005 Presented in this publication are the results of a major study of the petroleum resources of the world as analyzed by Total Petroleum Systems The distribution and volumes of resources available in these systems are critically important for the future of the world s economies Geologic insights gained from studying these 149 systems and their constituent assessment units in 128 provinces and 96 countries exclusive of the United States allow a new look at petroleum accumulations and the rocks that are intimately associated with them *Rethinking Authority in Global Climate Governance* Thomas Hickmann, 2015-10-16 In the past few years numerous authors have highlighted the emergence of transnational climate initiatives such as city networks private certification schemes and

business self regulation in the policy domain of climate change While these transnational governance arrangements can surely contribute to solving the problem of climate change their development by different types of sub and non state actors does not imply a weakening of the intergovernmental level On the contrary many transnational climate initiatives use the international climate regime as a point of reference and have adopted various rules and procedures from international agreements Rethinking Authority in Global Climate Governance puts forward this argument and expands upon it using case studies which suggest that the effective operation of transnational climate initiatives strongly relies on the existence of an international regulatory framework created by nation states Thus this book emphasizes the centrality of the intergovernmental process clustered around the United Nations Framework Convention on Climate Change UNFCCC and underscores that multilateral treaty making continues to be more important than many scholars and policy makers suppose This book will be of great interest to students and scholars of global environmental politics climate change and sustainable development *Global Review of Resource and Environmental Policies* ,1994 **The Population Crisis and the Use of World Resources** Stuart Mudd,2013-12-11 **Essays in Energy** Kaufui Vincent Wong,2015-11-10 Essays in Energy is a collection of a number of essays by the same number of engineers They show a variety of viewpoints and diversity This collection is meant to incite and excite conversation among engineers scientists and society at large It would serve as a catalyst for a three credit course as an introductory engineering subject to non engineering university students As university education develops to better prepare future leaders to appreciate science technology engineering and mathematics engineering courses for non engineering majors are essential and so is the requirement of worthy textbooks This monograph intends to be one of the useful tools available The wide range of topics includes nuclear power small hydroelectric plants wind turbines and organic photovoltaics Nanotechnology natural gas and deep sea oil drilling are presented as well

**Finite Global Resources** Gerhard Both,2005 A sobering glimpse at today s world this study examines the current status of nonrenewable global resources and how soon they are expected to run out Offering hope this book reveals the steps that society must be prepared to take to best protect what is left for future generations Suggestions include not only energy conservation and recycling but also more radical and fundamental measures such as downgrading the levels of technology employed and finding suitable substitutes for unsustainable materials **The Future of Energy Gases** D. G. Howell,1993

**Energy R & D and National Progress** United States. Energy Study Group,1965 **Rethinking Private Authority** Jessica F. Green,2013-12-22 Rethinking Private Authority examines the role of non state actors in global environmental politics arguing that a fuller understanding of their role requires a new way of conceptualizing private authority Jessica Green identifies two distinct forms of private authority one in which states delegate authority to private actors and another in which entrepreneurial actors generate their own rules persuading others to adopt them Drawing on a wealth of empirical evidence spanning a century of environmental rule making Green shows how the delegation of authority to private actors has

played a small but consistent role in multilateral environmental agreements over the past fifty years largely in the area of treaty implementation This contrasts with entrepreneurial authority where most private environmental rules have been created in the past two decades Green traces how this dynamic and fast growing form of private authority is becoming increasingly common in areas ranging from organic food to green building practices to sustainable tourism She persuasively argues that the configuration of state preferences and the existing institutional landscape are paramount to explaining why private authority emerges and assumes the form that it does In depth cases on climate change provide evidence for her arguments Groundbreaking in scope Rethinking Private Authority demonstrates that authority in world politics is diffused across multiple levels and diverse actors and it offers a more complete picture of how private actors are helping to shape our response to today s most pressing environmental problems
