(3) The primary N_2 -activation increases with the initial pressure and is eventually (at about 25 atmospheres) followed by a partial secondary NO-formation.

(4) With an initial pressure of 75 atmospheres or higher, the primary N_2 -activation becomes so intense that it is followed almost instantaneously by a large secondary NO-formation during the combustion period.

Research in the field of shock physics and ballistic impact has always been intimately tied to progress in development of facilities for accelerating projectiles to high velocity and instrumentation for recording impact phenomena The chapters of this book written by leading US and European experts cover a broad range of topics and address researchers concerned with questions of material behaviour under impulsive loading and the equations of state of matter as well as the design of suitable

instrumentation such as gas guns and high speed diagnostics Applications include high speed impact dynamics the inner composition of planets syntheses of new materials and materials processing Among the more technologically oriented applications treated is the testing of the flight characteristics of aeroballistic models and the assessment of impacts in the aerospace industry Limits of Inflammability of Gases and Vapors Hubert Frank Coward, George William Jones, 1931

Frontiers of Shock Wave Research Kazuyoshi Takayama, Ozer Igra, 2022-06-07 The book contains 12 chapters written by well known shock wave researchers from seven different countries Each researcher provides a brief description of his main research interests and results thereby providing the readers with an excellent view of shock wave research conducted in the past fifty years It also provides hints as to what still needs further investigation It will be an excellent guide for young researchers entering the field of shock wave phenomena Among the described investigations are the following topics Blast wave interaction with a body when the body is in the area of interference of two blast waves moving in different directions equation of state for water based on the shock Hugoniot data Mach waves occurring over a backward facing edge in supersonic flow shock waves in dusty gas shock wave interaction with various bodies three shock interactions **Official Gazette of the United States Patent and Trademark Office** ,1994 *The Mechanical Engineers' Pocket-book* William Kent, 1916 **The Industrial Chemist and Chemical Manufacturer** ,1929 *Gaseous Detonation Physics and Its Universal Framework Theory* Zonglin Jiang, Honghui Teng, 2022-12-16 This book highlights the theories and research progress in gaseous detonation research and proposes a universal framework theory that overcomes the current research limitations Gaseous detonation is an extremely fast type of combustion that propagates at supersonic speed in premixed combustible gas Being self sustaining and self organizing with the unique nature of pressure gaining gaseous detonation and its gas dynamics has been an interdisciplinary frontier for decades The research of detonation enjoyed its early success from the development of the CJ theory and ZND modeling but phenomenon is far from being understood quantitatively and the development of theories to predict the three dimensional cellular structure remains a formidable task being essentially a problem in high speed compressible reacting flow This theory proposed by the authors research group breaks down the limitation of the one dimensional steady flow hypothesis of the early theories successfully correlating the propagation and initiation processes of gaseous detonation and realizing the unified expression of the three dimensional structure of cell detonation The book and the proposed open framework is of high value for researchers in conventional applications such as coal mine explosions and chemical plant accidents and state of the art research fields such as supernova explosion new aerospace propulsion engines and detonation driven hypersonic testing facilities It is also a driving force for future research of detonation *Manual on Safety for Workers in Chemical Laboratories, Pilot Plants, Chemical Storerooms, Mechanical Shops* ,1954 **Energy Studies** William Shepherd, 1998 *Chemical Engineering and Mining Review* ,1923 **Industrial Arts Index** ,1926 *Poultry Grading Manual* Ashley R. Johndrew, Woot-tsuen Wu Leung, William Eugene Hauver, Bernice Kunerth Watt, Rebecca Koonce Pecot, 1951 **Aircraft Propulsion and Gas Turbine Engines** Ahmed F. El-Sayed, 2017-07-06 Aircraft Propulsion and Gas Turbine Engines Second Edition builds upon the success of the book's first edition with the addition of three major topic areas: Piston Engines with integrated propeller coverage, Pump Technologies, and Rocket Propulsion. The rocket propulsion section extends the text's coverage so that both Aerospace and Aeronautical topics can be studied and compared. Numerous updates have been made to reflect the latest advances in turbine engines, fuels, and combustion. The text is now divided into three parts: the first two devoted to air-breathing engines and the third covering non-air-breathing or rocket engines. *American Gas Engineering Journal*, 1927
