Gases In Molten Salts Solubility Data Series:

Solubility Data Series, 1991 **Gases in Molten Salts** R.P.T. Tomkins, N.P. Bansal, 2016-01-22 This volume contains tabulated collections and critical evaluations of original data for the solubility of gases in molten salts gathered from chemical literature through to the end of 1989 Within the volume material is arranged according to the individual gas The gases include hydrogen halides inert gases oxygen nitrogen hydrogen carbon dioxide water vapor and halogens The molten salts consist of single salts binary mixtures and multicomponent systems Included also is a special section on the solubility of gases in molten silicate systems focussing on slags and fluxes *Mercury in Liquids, Compressed Gases, Molten Salts and Other Elements* H. Lawrence Clever, 2013-10-22 An element of obvious importance mercury is also hazardous in the environment and corrosive to many materials A knowledge of its solubility is inestimable in addressing problems concerning the element's concentration in our surroundings This volume presents all relevant data published on the solubility of mercury up to June 1986 By combining these data with the mercury equilibrium vapour pressure Henry's constant and Ostwald coefficients can be calculated The Experimental Determination of Solubilities G. T. Hefter, R. P. T. Tomkins, 2003-11-14 Guidelines are provided on the reliability of various methods as well as information for selecting the appropriate technique Unique coverage of the whole range of solubility measurements Very useful for investigators interested in embarking upon solubility measurements *Solubility Data Series* R.W. Cargill, 2013-10-22 This volume in the Solubility Data Series contains tabulated collections and critical evaluations of original data for the solubility of carbon monoxide in a variety of liquid solvents The solvents include water aqueous and non aqueous salt solutions a variety of hydrocarbons a variety of oxygen containing halogen containing sulfur containing and nitrogen containing organic compounds and also some biological fluids with which carbon monoxide has an important interaction The data were gathered from a search of the world's chemical literature through to the end of 1988 and make up a unique and valuable historical survey of the solubility of carbon monoxide Their publication is timely in view of current concern about carbon monoxide as an atmospheric pollutant and in view of the role which carbon monoxide is likely to play in the future as chemical feedstocks may have to change in response to supply and demand patterns and as alternative energy sources are developed especially coal gasification technology For all of these applications and for numerous others this volume of well documented and critically evaluated gas solubility data will be of tremendous benefit Ionic Liquid Properties Yizhak Marcus, 2016-04-22 This volume deals with substances in the liquid state that range from high melting salts such as calcium fluoride through slags such as silicates down to lower melting salts such as lithium nitrate molten hydrated salts such as magnesium chloride hexahydrate to room temperature ionic liquids such as 1,3-dimethylimidazolium tetraphenylborate It provides the reader with annotated critically examined and compiled data for such materials The data includes a variety of thermochemical structural and transport properties The book includes correlations of measured properties these correlations should enable the reader to estimate on a sound basis

properties for ionic liquids that have not yet been measured
