## **Gaston Bachelard Critic Of Science And Imagination:**

Gaston Bachelard Cristina Chimisso,2001 In this new study Cristina Chimisso explores the work of the French Philosopher of Science Gaston Bachelard 1884 1962 by situating it within French cultural life of the first half of the century The book is introduced by a study based on an analysis of portraits and literary representations of how Bachelard s admirers transformed him into the mythical image of the Philosopher the Patriarch and the Teacher of Happiness Such a projected image is contrasted with Bachelard s own conception of philosophy and his personal pedagogical and moral ideas This pedagogical orientation is a major feature of Bachelard s texts and one which deepens our understanding of the main philosophical arguments The primary thesis of the book is based on the examination of the French educational system of the time and of French philosophy taught in schools and conceived by contemporary philosophers This approach also helps to explain Bachelard s reception of psychoanalysis and his mastery of modern literature Gaston Bachelard Critic of Science and the Imagination thus allows for a new reading of Bachelard s body of work whilst at the same time providing an insight into twentieth century French culture

Gaston Bachelard, Revised and Updated Roch C. Smith,2016-06-03 Comprehensive overview of the entire spectrum of works by one of twentieth century France s most original thinkers Gaston Bachelard one of twentieth century France s most original thinkers is known by English language readers primarily as the author of The Poetics of Space and several other books on the imagination but he made significant contributions to the philosophy and history of science In this book Roch C Smith provides a comprehensive introduction to Bachelard s work demonstrating how his writings on the literary imagination can be better understood in the context of his exploration of how knowledge works in science After an overview of Bachelard s writings on the scientific mind as it was transformed by relativity quantum physics and modern chemistry Smith examines Bachelard s works on the imagination in light of particular intellectual values Bachelard derived from science His trajectory from science to a specifically literary imagination is traced by recognizing his concern with what science teaches about how we know and his increasing preoccupation with questions of being when dealing with poetic imagery Smith also explores the material and dynamic imagination associated with the four elements fire water air and earth and the phenomenology of creative imagination in Bachelard s Poetics of Space his Poetics of Reverie and in the fragments of Poetics of Fire

**Writing the History of the Mind** Cristina Chimisso,2016-02-11 For much of the twentieth century French intellectual life was dominated by theoreticians and historians of mentalit Traditionally the study of the mind and of its limits and capabilities was the domain of philosophy however in the first decades of the twentieth century practitioners of the emergent human and social sciences were increasingly competing with philosophers in this field ethnologists sociologists psychologists and historians of science were all claiming to study how people think Scholars including Gaston Bachelard Georges Canguilhem L on Brunschvicg Lucien L vy Bruhl Lucien Febvre Abel Rey Alexandre Koyr and H l ne Metzger were all investigating the mind historically and participating in shared research projects Yet as they have

since been appropriated by the different disciplines literature on their findings has so far failed to recognise the connections between their research and their importance in intellectual history In this exemplary book Cristina Chimisso reconstructs the world of these intellectuals and the key debates in the philosophy of mind particularly between those who studied specific mentalities by employing prevalently historical and philological methods and those who thought it possible to write a history of the mind outlining the evolution of ways of thinking that had produced the modern mentality Dr Chimisso situates the key French scholars in their historical context and shows how their ideas and agendas were indissolubly linked with their social and institutional positions such as their political and religious allegiances their status in academia and their familial situation The author employs a vast range of original research using philosophical and scientific texts as well as archive documents correspondence and seminar minutes from the period covered to recreate the milieu in which these relatively neglected scholars made advances in the history of philosophy and science and produced The Early Wittgenstein on Metaphysics, Natural Science, Language and Value Chon Tejedor, 2014-09-04 This book advances a reading of Wittgenstein's Tractatus that moves beyond the main interpretative options of the New Wittgenstein debate It covers Wittgenstein's approach to language and logic as well as other areas unduly neglected in the literature such as his treatment of metaphysics the natural sciences and value Tejedor re contextualises Wittgenstein's thinking in these areas plotting its evolution in his diaries correspondence and pre Tractatus texts and developing a fuller picture of its intellectual background This broadening of the angle of view is central to the interpretative strategy of her book only by looking at the Tractatus in this richer light can we address the fundamental questions posed by the New Wittgenstein debate questions concerning the method of the Tractatus its approach to nonsense and the continuity in Wittgenstein's philosophy Wittgenstein's early work remains insightful thought inspiring and relevant to contemporary philosophy of language and science metaphysics and ethics Tejedor's ground breaking work ultimately conveys a surprisingly positive message concerning the power for ethical transformation that philosophy can have when it is understood as an activity aimed at increasing conceptual clarification and awareness

**Rediscovering Léon Brunschvicg's Critical Idealism** Pietro Terzi, 2022-01-13 L on Brunschvicg's contribution to philosophical thought in fin de siècle France receives full explication in the first English language study on his work Arguing that Brunschvicg is crucial to understanding the philosophical schools which took root in 20th century France Pietro Terzi locates Brunschvicg alongside his contemporary Henri Bergson as well as the range of thinkers he taught and influenced including Lévinas Merleau Ponty de Beauvoir and Sartre Brunschvicg's deep engagement with debates concerning spiritualism and rationalism neo Kantian philosophy and the role of mathematics in philosophy made him the perfect supervisor for a whole host of nascent philosophical ideas which were forming in the work of his students Terzi outlines Brunschvicg's defence of neo Kantian judgement historical analysis and the inextricability of the natural and humanist sciences to any rigorous system of philosophy with wide ranging implications for contemporary scholarship *Wittgenstein*

and Levinas Bob Plant, 2005-02-16 Wittgenstein and Levinas examines the oft neglected relationship between the philosophies of two of the most important and notoriously difficult thinkers of the twentieth century By bringing the work of each philosopher to bear upon the other Plant navigates between the antagonistic intellectual traditions that they helped to share The central focus on the book is the complex yet illuminating interplay between a number of ethical religious themes in both Wittgenstein's mature thinking and Levinas's distinctive account of ethical responsibility **African Philosophy and Enactivist Cognition** Bruce B. Janz, 2022-10-20 Using classic texts in African philosophy Bruce B Janz applies the strand of cognitive science known as enactivism to realise new connections and intersections between both fields The idea that cognition is embodied and embedded in a social world neatly maps onto specifically African epistemologies to outline a new direction of study on what philosophy is By working through a rich range of texts and thinkers Janz provides a fruitful new interpretation of African philosophy and provides close readings of seminal and sidelined thinkers to provide an invaluable resource for students and scholars Janz's study takes in the creative humanism of Sylvia Wynter Placide Tempels's Bantu Philosophy Mbiti's theory of time Oruka's last work on sage philosophy Mogobe Ramose's own version of Ubuntu Sophie Oluwole's active literature of philosophy Achille Mbembe's excoriating attack on the effects of colonialism on life in Africa and Suzanne C saire writings on n gritude This book reorients African philosophy towards an active and creative future informed by enactivist thinking *The Metaphysics of Perception* Paul Coates, 2007-09-12 This book is an important study in the philosophy of the mind drawing on the work of philosopher Wilfrid Sellars and the theory of critical realism to develop a novel argument for understanding perception and metaphysics Strung Together Sean Miller, 2013-03-18 In *Strung Together* The Cultural Currency of String Theory as a Scientific Imaginary Sean Miller examines the cultural currency of string theory both as part of scientific discourse and beyond it He demonstrates that the imaginative component of string theory is both integral and indispensable to it as a scientific discourse While mathematical arguments provide precise prompts for physical intervention in the world the imaginary that supplements mathematical argument within string theory technical discourse allows theorists to imagine themselves interacting with the cosmos as an abstract space in such a way that strings and branes as phenomena become substantiated and legitimized And it is precisely this sort of imaginary which Miller calls a scientific imaginary duly substantiated and acculturated that survives the move from string theory technical discourse to popularizations and ultimately to popular and literary discourses In effect a string theory imaginary legitimizes the science itself and helps to facilitate a virtual domestication of a cosmos that was heretofore remote alien and incomprehensible **The Oxford Handbook of Modern French Philosophy**, 2024-06-25 French philosophy is an internationally celebrated national philosophical tradition and this Oxford Handbook offers a comprehensive approach to its history since 1800 The Handbook features essays written by renowned international specialists illuminating key movements and positions themes and thinkers in nineteenth twentieth and even twenty first century French philosophy The volume takes

into account developments in recent historical scholarship by broadening the notion of Modern French Philosophy in two ways Whereas recent approaches in the field have often ignored early nineteenth century developments this volume offers comprehensive treatment of French thought of this period in order to grasp better later developments Moreover the volume extends the canon at the other end of the period of Modern French Philosophy by including work on philosophers who have come to prominence only in the last ten or twenty years The volume takes French philosophy in a broad sense to include all philosophy carried out in France over the last 200 years and it illuminates the institutional and cultural background of this national philosophical tradition in such a way as to provide a fuller and more comprehensive understanding of its unity and of its more famous moments in the twentieth century

**Architecture and Fire** Stamatis Zografos, 2019-06-12 Architecture and Fire develops a conceptual reassessment of architectural conservation through the study of the intimate relationship between architecture and fire Stamatis Zografos expands on the general agreement among many theorists that the primitive hut was erected around fire locating fire as the first memory of architecture at the very beginning of architectural evolution Following the introduction Zografos analyses the archive and the renewed interest in the study of archives through the psychoanalysis of Jacques Derrida He moves on to explore the ambivalent nature of fire employing the conflicting philosophies of Gaston Bachelard and Henri Bergson to do so before discussing architectural conservation and the relationship between listed buildings the function of archives and the preservation of memories from the past The following chapter investigates how architecture evolves by absorbing and accommodating fire while the penultimate chapter examines the critical moment of architectural evolution the destruction of buildings by fire with a focus on the tragic disaster at London's Grenfell Tower in 2017 Zografos concludes with thoughts on Freud's drive theory He argues the practice of architectural conservation is an expression of the life drive and a simultaneous repression of the death drive which suggests controlled destruction should be an integral part of the conservation agenda Architecture and Fire is founded in new interdisciplinary research navigating across the boundaries of architecture conservation archival theory classical mythology evolutionary theory thermodynamics philosophy and psychoanalysis It will be of interest to readers working in and around these disciplines

**Reconsidering Historical Epistemology** Matteo Vagelli, 2024-06-27 This book explores the key conceptual stakes underpinning historical epistemology The strong Anglophone interest in historical epistemology since at least the 1990s is typically attributed to its simultaneously philosophical and historical synthetic approach to the study of science Yet this account considered by critics to be an unreflective assumption has prevented historical epistemology from developing a clear understanding and definition especially regarding how precisely historical and philosophical reflections on the sciences should be combined Thus this book uniquely analyses how the problems and tensions inherent to the contemporary phase of historical epistemology can be clarified by reference to the classical French phase The archaeological method of Michel Foucault which draws on and transforms fundamental insights by Gaston Bachelard and Georges

Canguilhem is used to exert an enduring influence on the field especially through the work of Ian Hacking and his philosophical cum historical analyses of styles of scientific reasoning Though this book is of great value to academic specialists and graduate students the fact it addresses questions broad in scope ensures it is also relevant to a range of scholars in many disciplines and will provoke discussion among those interested in foundational issues in history and philosophy of science Vagelli s book provides a both unique and uniquely important window into historical epistemology and its relation to contemporary philosophy of science Unique because nowhere else can one find a single work that treats the range of topics that he covers Uniquely important because Vagelli s clear concise and comprehensive survey details key interrelationships among a range of American British and European views currently in play regarding historical epistemology and philosophy of science as well as the institutional and intellectual vectors driving their associated epistemological positions Paul Roth UC Santa Cruz USA Uneasily the history and philosophy of science have bolstered and undermined each other for all too long Would history offer nothing but potted episodes to confirm or contradict transhistorical claims about science Would philosophy dismantle uncritical historicist accounts of scientific discoveries Historical epistemology offers a more integrated path at once a history of the present and a philosophy of the past Matteo Vagelli draws together the insights of the Francophone Anglophone and Germanophone traditions to give us a sparkling lucid account of seeing our standards of scientific understanding as developing across time always asking how did we come to our standards of demonstration and argument Peter Galison Harvard University USA

**Curriculum and the Specialization of Knowledge** Michael Young,Johan Muller,2015-09-07 This book presents a new way for educators at all levels from early years to university to think about curriculum priorities It focuses on the curriculum as a form of specialised knowledge optimally designed to enable students to gain access to the best knowledge available in any field Papers jointly written by the authors over the last eight years are revised for this volume It draws on the sociology of knowledge and in particular the work of Emile Durkheim and Basil Bernstein opening up the possibilities for collaborative inter disciplinary enquiry with historians philosophers and psychologists Although primarily directed to researchers university teachers and graduate students its arguments about specialised knowledge have profound implications for policy makers **French Literary Criticism** ,2024-09-09

Post-Rationalism Tom Eyers,2013-05-09 Post Rationalism takes the experimental journal of psychoanalysis and philosophy Cahiers pour l Analyse as its main source Established by students of Louis Althusser in 1966 the journal has rarely figured in the literature although it contained the first published work of authors now famous in contemporary critical thought including Alain Badiou Jean Claude Milner Luce Irigaray Andr Green and Jacques Alain Miller The Cahiers served as a testing ground for the combination of diverse intellectual sources indicative of the period including the influential reinvention of Freud and Marx undertaken by Lacan and Althusser and the earlier post rationalist philosophy of science pioneered by Gaston Bachelard Georges Canguilhem and Alexandre Koyr This book is a wide ranging analysis of the

intellectual foundations of structuralism re connecting the work of young post Lacanian and post Althusserian theorists with their predecessors in French philosophy of science Tom Evers provides an important corrective to standard histories of the period focussing on the ways in which French epistemological writing of the 1930s and 1940s especially that of Bachelard and Canguilhem laid the ground for the emergence of structuralism in the 1950s and 1960s thus questioning the standard historical narrative that posits structuralism as emerging chiefly in reaction to phenomenology and existentialism **An Epistemology of the Concrete** Hans-Jörg Rheinberger, 2010-09-06 Brings together case studies and theoretical reflections on the history and epistemology of the life sciences by Hans J rg Rheinberger one of the foremost philosophers of science

*Place, Space and Hermeneutics* Bruce B. Janz, 2017-03-29 This book analyzes the hermeneutics of place raising questions about central issues such as textuality dialogue and play It discusses the central figures in the development of hermeneutics and place and surveys disciplines and areas in which a hermeneutic approach to place has been fruitful It covers the range of philosophical hermeneutic theory both within philosophy itself as well as from other disciplines In doing so the volume reflects the state of theorization on these issues and also looks forward to the implications and opportunities that exist Philosophical hermeneutics has fundamentally altered philosophy s approach to place Issues such as how we dwell in place how place is imagined created preserved and lost and how philosophy itself exists in place have become central While there is much research applying hermeneutics to place there is little which both reflects on that heritage and critically analyzes a hermeneutic approach to place This book fills that void by offering a sustained analysis of the central elements major figures and disciplinary applications of hermeneutics and place **The Past, Present, and Future of Integrated History and**

**Philosophy of Science** Emily Herring, Kevin Jones, Konstantin Kiprijanov, Laura Sellers, 2019-05-14 Integrated History and Philosophy of Science iHPS is commonly understood as the study of science from a combined historical and philosophical perspective Yet since its gradual formation as a research field the question of how to suitably integrate both perspectives remains open This volume presents cutting edge research from junior iHPS scholars and in doing so provides a snapshot of current developments within the field explores the connection between iHPS and other academic disciplines and demonstrates some of the topics that are attracting the attention of scholars who will help define the future of iHPS

*Metaphysics and the Sciences in Nineteenth-Century France* , 2025-07-22 This volume is the first systematic study of the style of reasoning specific to the field of philosophy in nineteenth century France The chapters analyze the often dispersed responses to the fundamental question of the division of the sciences based on the reciprocal relationships of inclusion or exclusion of adversity or sorority between metaphysics and the positive sciences In line with the arrhythmic progress of the different forms of knowledge these responses renew the Condillacian criticisms of the Cartesian order of the relationships between metaphysics and physics Between a pronounced divorce and a successful marriage this volume traces the philosophical history of the various attempts at divorce or union which as the century progressed resulted in original

hybridizations that aspired to define a new and ever problematic French philosophy      *New Challenges to Philosophy of Science* Hanne Andersen, Dennis Dieks, Wenceslao J. Gonzalez, Thomas Uebel, Gregory Wheeler, 2013-05-28 This volume is a serious attempt to open up the subject of European philosophy of science to real thought and provide the structural basis for the interdisciplinary development of its specialist fields but also to provoke reflection on the idea of European philosophy of science This efforts should foster a contemporaneous reflection on what might be meant by philosophy of science in Europe and European philosophy of science and how in fact awareness of it could assist philosophers interpret and motivate their research through a stronger collective identity The overarching aim is to set the background for a collaborative project organising systematising and ultimately forging an identity for European philosophy of science by creating research structures and developing research networks across Europe to promote its development
