Husband and Reznick's Imaging in Oncology Janet Husband, Rodney H. Reznick, Janet E. Husband, 2009-12-23 In recent years there has been recognition of the central role of imaging in the management of patients with cancer. The third edition of this widely acclaimed book builds on the foundations laid down by the first edition the 1998 winner of the Royal Society's award for the Multi author Textbook of the Year and the second 2004 The core of the **Handbook of Advanced Cancer Care** Michael J. Fisch, Eduardo Bruera, 2003-03-27 Patients with advanced cancer increasingly receive end of life care from a variety of health care professionals physicians and nurses. These professionals need to be able to assess the original diagnosis and the appropriateness of patient referral set a treatment or palliation program and recognise and plan for the clinical problems associated with specific primary tumors. This is the first comprehensive source of information available at a level between specialist oncology texts and nursing texts. Two eminent physicians from one of the world's foremost cancer centers have drawn together a remarkable team to provide a handbook which covers the full range of problems the healthcare workforce caring for these patients will encounter. This highly accessible text covers general principles in oncology the primary tumors one by one and management of specific symptoms and syndromes. It will be invaluable to primary care physicians surgeons nurses therapists and trainees. **Monthly Catalogue, United States Public Documents**, 1985 *Monthly Catalog of United States Government Publications* United States. Superintendent of Documents, 1993 **Management of Gastric Cancer** Paul H. Sugarbaker, 2012-12-06 Gastric cancer has been one of the great malignant scourges affecting mankind for as long as medical records have been kept. Until operative resection pioneered by Billroth and others became available no effective treatment was feasible and death from cancer was virtually inevitable. Even with resection by total gastrectomy the chances of tumor eradication remained small. Over recent years however the situation has been changing. Some changes have resulted from better understanding of the disease early detection and better management techniques with applied clinical research but the reasons for other changes are poorly understood. For example the incidence of gastric cancer is decreasing especially in westernized societies where it has fallen from one of the most common cancers to no longer being in the top five causes of cancer death. Still it remains the number one killer of adult males in Japan and Korea. Whether the reduced incidence in western societies is a result of dietary changes or methods of food preservation or some other reason is as yet uncertain. Improvements in outcome have been reported from mass screening and early detection more refined techniques of

establishing early diagnosis tumor type and tumor extent more radical surgical resection and resection at earlier stages of disease *New Drugs, Concepts and Results in Cancer Chemotherapy* Franco M. Muggia, 2012-12-06 Cancer Treatment Reports ,1986

Molecular and Clinical Advances in Anticancer Drug Resistance Robert F. Ozols, 2012-12-06 The importance of drug resistance in cancer chemotherapy cannot be over stated The 500 000 patients who die every year from cancer in the United States have in most cases been treated with chemotherapy Many of these patients responded initially to chemotherapy but death resulted from the development of drug resistant tumors In the first volume in the series *Drug Resistance in Chemotherapy* the results of comprehensive laboratory studies aimed at understanding the mechanisms for resistance to individual agents and to the development of broad cross resistance were described In the past 2 years there has been substantial progress in understanding the molecular biology associated with these mechanisms of drug resistance For the first time we are starting to understand which mechanisms are playing an important role in human tumors and even more importantly clinical trials have recently been initiated in an effort to reverse specific forms of drug resistance The purpose of this volume is to describe the new advances both at the molecular level and in the clinic regarding mechanisms of drug resistance and potential ways this resistance can be circumvented This volume is focused upon mechanisms of resistance associated with two major classes of anticancer drugs alkylating agents including cisplatin and the natural products e g adriamycin and vinblastine The first section of the book describes new insights into the genetic mechanisms associated with drug resistance
