Gastrointestinal Tract Cancer:

Gastrointestinal Tract Cancer Martin Lipkin, 2013-11-11 In observing the development of modern scientific knowledge many individuals have expressed concern over the rapid growth of information in various specialized disciplines Over 100 years ago the first Secretary of the Smithsonian Institution and more recently Dr Vannevar Bush while proposing the modern expansion of the National Institutes of Health both noted problems that prevented the proper utilization of information by individuals in medical and related scientific fields These observations together with concomitant implications of future difficulty are particularly pertinent to the field of oncology The rapid evolution of the latter discipline has largely been aided by the incorporation of concepts and methods developed over a long period of time and drawn from a wide variety of other scientific fields The large body of discoveries that have contributed to our current understanding of neoplasia however cannot be viewed as being made up of equal parts They bring to mind Claude Bernard's view des determinismes simples et complexes in the physiological and biochemical regulation of bodily functions He was able to observe that the most important and basic of physiologic processes were destined to be fewer in number than those of less fundamental and more highly specialized purpose He understood that in the future development of medical science studies of the latter would occupy much of the time and attention of investigators and were likely to contribute much to scientific literature **Cancer**

of the Upper Gastrointestinal Tract Mitchell C. Posner, Everett E. Vokes, Ralph R. Metastasis in Gastrointestinal Cancer Shoji Natsugoe,2019-01-23 This book provides the most comprehensive and up to date knowledge of lymph node micrometastasis LMM and sentinel node navigation surgery SNNS in gastrointestinal cancers Lymph node metastasis is a critically important prognostic factor in gastrointestinal tract cancers such as tumors of the esophagus stomach and colorectum An understanding of the basic aspects of lymphatics and lymph nodes including anatomy histology physiology immunology and molecular biology is fundamental for physicians who are involved in cancer treatment Furthermore owing to the development of molecular and biological methodology the precise recognition of LMM and its clinical significance have been clarified recently At the same time SNNS has actually been anticipated in treatment of breast tumors and it is now being introduced in gastrointestinal tract cancer For the application of SNNS the detection of lymph node metastasis including LMM is extremely significant because the presence of LMM determines the direction for surgery and chemo and or radiation therapy With these considerations in mind the expert contributors to this book review basic and clinical approaches for LMM and SNNS including methodology for gastrointestinal cancers Thus this volume benefits not only surgeons who treat gastrointestinal cancers but also clinical oncologists and medical scientists such as physiologists and pathologists **Gastrointestinal Cancer** Ralph R., Jr. Dobelbower,2012-12-06 Primary malignant tumors of the

gastrointestinal tract account for 23% of all invasive cancers and 24% of all the deaths in 1988 In the United States the

American Cancer Society estimates that there will be 227500 new cases of gastrointestinal malignancy diagnosed with 122350 deaths. This includes 9800 new cases of carcinomas of the esophagus, 24800 carcinomas of the stomach, 2500 new cases of malignant tumors of the small intestine, 105000 new cases of tumors of the large intestine, and 42000 new cases of carcinoma of the rectum. 14000 new cases involving the liver and biliary passages, 27000 new cases of carcinoma of the pancreas, and 2400 other unspecified digestive tract malignancies. This combined incidence is second only to the number of new cases of lung cancer. Bleeding from the gastrointestinal tract represents one of the earliest findings with regard to malignancy of the gastrointestinal tract. In general, personal or family history of colon and rectal cancer, personal or family history of polyps in the colon or rectum, or inflammatory bowel disease are high risk factors with regard to tumors in these locations. Dietary behavior is also important in that a diet high in fat and/or low in fiber content may be a significant causative factor.

FROM THE PREFACE The original purpose of the First Edition of *Physiology of the Gastrointestinal Tract* to collect in one set of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition. The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition. The first section now titled Basic Cell Physiology and Growth of the GI Tract contains numerous new chapters on topics such as transcriptional regulation, signaling networks in development, apoptosis, and mechanisms in malignancies. Most of the chapters in this section were edited by Juanita L. Merchant. Section II has been renamed Neural Gastroenterology and Motility and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology, neural regulation, stress, and the regulation of food intake. Almost all of the chapters were recruited and edited by Jackie D. Wood. The third section is entirely new and contains chapters on Immunology and Inflammation which were edited by Kim E. Barrett. The fourth section on the Physiology of Secretion consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion. The last section on Digestion and Absorption contains new chapters on the intestinal barrier, protein sorting, and ion channels along with those focusing on the uptake of specific nutrients. These chapters were recruited and edited by Hamid M. Said and Faye K. Ghishan. Collected in one set, the most current and comprehensive coverage of gastrointestinal physiology. Information presented in a style that is both readable and understandable. Valuable to the specialized researcher, the clinical gastroenterologist, the teacher, and the student. Features an entirely new section on Immunology and Inflammation. Each section edited by the preeminent scientist in the field.

Combined Modality Therapy of Gastrointestinal Tract Cancer Peter Schlag,Peter Hohenberger,Urs Metzger,2012-12-06 Modern surgical oncology is characterized by multimodal therapy In recent years numerous therapeutic approaches of pre peri intra and postoperative treatment have been in vestigated with regard to their use in combination with surgi cal intervention It now is time to analyze and to define the state of our knowledge For tumors of the gastrointestinal tract there are several encouraging therapeutic approaches such as preop erative chemotherapy in esophageal and perioperative chemotherapy in colon cancer For some special tumors like anal carcinoma we have clearly defined combined therapies which even now must be viewed as standard treatment It is also time to demonstrate the results of several clini cal studies that have been conducted within the last few years that combined surgical efforts with pre or postinter ventional chemotherapy or radiotherapy It is necessary to evaluate whether these trials contribute to progress in onco logical therapy The editors of this volume surgeons at the university hospitals of Heidelberg and Zurich must be given the mer it of achieving these goals It was especially appropriate for the Department of Surgery in Heidelberg in close coopera tion with the Comprehensive Cancer Center Heidelberg Mannheim to prepare a review of our present knowledge of

surgical oncology as it is in the tradition of attempting to combine different therapeutic approaches to cancer therapy

MacDonald, 2012-12-06 This is the third volume on gastrointestinal cancer of the Cancer Treatment and Research Series The emphasis in this volume is to present a series of papers on areas of high clinical relevance in malignant diseases of the gut As in the first and second volumes of this series authors have been selected for their expertise and national and international prominence in their fields This volume is organized so that papers explaining basic science progresses proceed those dealing with clinical aspects of gastrointestinal cancer It is clear that in many instances advances in gastrointestinal carcinoma cannot be effectively treated if cure is the desired goal When faced with poorly treatable diseases it is obviously important to look toward the causes and prevention of these illnesses For this reason there are several chapters in this volume that examine the issue of carcinogenesis of gastrointestinal cancer Likewise in diseases that are poorly treatable in advanced stages one is interested in early detection Thus early screening of populations becomes important and is dealt with in three papers in this volume Chapters on treatment explore innovative approaches to therapy of gastrointestinal cancer Second look surgery with resection arterial perfusion with chemotherapy adjuvant therapy and neoadjuvant therapy are all addressed in various chapters in this volume Finally four chapters deal with unusual problems in gastrointestinal cancer These papers include discussions of primary hepatobiliary cancer lymphoma of the gut and gastrointestinal endocrine tumors Roles of Gut Microbiota in Cancers of the Gastrointestinal Tract William K. K. Wu, Jun Yu, Sunny H. Wong, 2025-06-02 The gut microbiota comprised of a large population of microorganisms including bacteria bacteriophages fungi and archaea interacting closely with the host plays a major role in gut inflammation and tumorigenesis through direct cell-cell contact or secretion of bioactive substances Shotgun metagenomic sequencing studies conducted in the last decade have revealed the widespread alterations of the microbial landscape in tumors of the gastrointestinal GI tract and together with functional experiments pinpointed specific microbes that functionally contribute to tumorigenesis Altered gut microbiota is causally linked to GI cancers In light of the increasingly appreciated association specific fecal microbes have been promulgated as non-invasive diagnostic markers for early GI cancer detection Moreover modulation of the gut microbiota has been proposed as a new strategy to prevent GI cancers and enhance the efficacy of GI cancer therapies This Research Topic will cover issues in these interconnected areas that help transform discoveries in basic science into clinical applications This Research Topic seeks to capture the state-of-the-art development in the field of GI cancer microbiota to consolidate our understanding of the functional roles of gut microbes in GI tumorigenesis and their exploitation in GI cancer diagnosis and prevention This Research Topic also welcomes contributions that shed new light on the roles and mechanisms of gut microbes in modulating the efficacy of GI cancer therapies including chemotherapy and immunotherapy Both original articles and reviews are welcome
