Handbook Of Olive Oil:

Handbook of Olive Oil: Analysis and Properties Ramon Aparicio, John Harwood, 2013-11-09 Olive oil is the major edible vegetable oil of the Mediterranean countries and Portugal It is also perhaps the oldest reported crop in history The olive tree is capable of existing in a harsh climate on poor soils and trees 500 years old still bear fruit The oil itself is much prized for its flavor and aroma The highest quality oils are obtained without solvent extraction from fresh and healthy fruits Although the subtle sensory characteristics of olive oil account for its popularity despite a high market price increasing interest has been given to its nutritional properties which are believed to play a large role in the so called Mediterranean Diet In this book we provide a wealth of detail about the analysis and properties of olives and their oil After an introduction to olive oil and to technological aspects we include a section on biochemistry because of course the unique properties of the oil are based on the biochemistry of the olive fruit This applies not only to the main constituents the various triacylglycerols but also to minor sensory components that are derived largely from the lipoxygenase catabolic pathway Following are chapters that deal with the analysis of olive oil from the standpoint of general methodology and later chapters describe detailed techniques The sophisticated analytical methods have to be evaluated by the use of mathematical procedures for characterization

Handbook of Olive Oil Ramón Aparicio, John Harwood, 2013-09-28 The Handbook of Olive Oil presents an up to date view of all aspects of olive oil It is written from an interdisciplinary point of view and will be of use in research and development as well as in routine laboratory and process operations This second edition includes new chapters devoted to genetic studies and agronomic aspects of new orchards and cultivars which in combination with the most recent biochemical studies and technological developments explain the unique chemical composition of olive oil The analytical aspects of the first edition are now described in six new chapters focused on the chemical compounds responsible for olive oil traceability and sensory perceptions odor color and taste utilizing chromatographic spectroscopic and in tandem techniques Nutritional and sensory aspects are the basis for the current success of virgin olive oil among consumers and this new edition re analyzes in two new chapters the role of lipids in general and olive oil in particular in nutrition and health In addition the methodologies developed for determining sensory quality olive oil oxidation and deep frying are extensively described and discussed The role of consumers in olive oil studies of marketing and acceptability is covered in a new chapter This second edition has not ignored the fact that the popularity of olive oil has made it a preferred target for fraudsters Deliberate mislabeling or mixtures containing less expensive edible oils are topics described in depth in two chapters devoted to traceability and adulteration There is also a new chapter focused on the olive refining process which is a relevant activity in the olive oil world and another chapter displaying tables of chemical and sensory information from olive oils produced all over the world The book is written at two levels the main level is structured as a tutorial on the practical aspects of olive oil A second more methodological level is intended for specialists in the different sciences that contribute to olive oil studies

biochemistry chemistry physics statistics etc This edition also details changes that are needed in different disciplines in order to overcome current problems and challenges
