## **Handbook Of Optical Constants Of Solids And Subject Index:**

*Handbook of Optical Constants of Solids Five-volume Set: Subject index and contributor index*, 1998      **Subject Index Contributor Index (handbook Of Optical Constants Of Solids I, Ii, Iii)** Kaminow I.P.,      **Handbook of Optical Constants of Solids** Edward D. Palik, 1997 This five volume set provides a database of the refractive index and extinction or loss coefficient of technically important and scientifically interesting dielectrics The dielectric constant database is supplemented by tutorial chapters covering the basics of dielectric theory and reviews of experimental techniques for each wavelength region and material characteristic Two of the tutorial chapters summarize the relevant characteristics of each of the materials in the database The data in the core volumes has been collected and analyzed over a period of 12 years with the most recent completed in 1997 The set presents various techniques for measuring the optical constants and mathematical models for analytical calculations of some data      **Handbook of Optical Constants of Solids, Five-Volume Set** Edward D. Palik, 1997-12-10 This set of five volumes four volumes edited by Edward D Palik and a volume by Gorachand Ghosh is a unique resource for any science and technology library It provides materials researchers and optical device designers with reference facts in a context not available anywhere else The singular functionality of the set derives from the unique format for the three core volumes that comprise the Handbook of Optical Constants of Solids The Handbook satisfies several essential needs first it affords the most comprehensive database of the refractive index and extinction or loss coefficient of technically important and scientifically interesting dielectrics This data has been critically selected and evaluated by authorities on each material Second the dielectric constant database is supplemented by tutorial chapters covering the basics of dielectric theory and reviews of experimental techniques for each wavelength region and material characteristic As an additional resource two of the tutorial chapters summarize the relevant characteristics of each of the materials in the database The data in the core volumes have been collected and analyzed over a period of twelve years with the most recent completed in 1997 The volumes systematically define the dielectric properties of 143 of the most engaging materials including metals semiconductors and insulators Together the three Palik books contain nearly 3 000 pages with about 2 3 devoted to the dielectric constant data The tutorial chapters in the remaining 1 3 of the pages contain a wealth of information including some dielectric data Hence the separate volume Index to Handbook of Optical Constants of Solids which is included as part of the set substantially enhances the utility of the Handbook and in essence joins all the Palik volumes into one unit It is then of great importance to users of the set A final volume rounds out the set The Handbook of Thermo Optic Coefficients of Optical Materials with Applications collects refractive index measurements and their temperature dependence for a large number of crystals and glasses Mathematical models represent these data and in turn are used in the design of nonlinear optical devices Unique source of extremely useful optical data for a very broad community of scientists researchers and practitioners Will be of great practical applicability to both industry and research Presents optical constants for a broadest

spectral range for a very large number of materials Paliks three volumes include 143 materials including 43 elements Ghosh's volume includes some 70 technologically interesting crystals and many commercial glasses Includes a special index volume that enables the user to search for the information in the three Palik volumes easily and quickly Critique chapters in the Palik volumes discuss the data and give reference to most of the literature available for each material Presents various techniques for measuring the optical constants and mathematical models for analytical calculations of some data

[The Optical Constants of Bulk Materials and Films](#), Leslie Ward, 1994 Since publication of the first edition of this book in 1988 interest in the optical properties of materials has continued to grow and there have been a number of important developments in the field The aim of this second edition is to present an up to date and broad picture of the field of optical constants covering the theoretical background experimental techniques and results for a wide range of materials bulk and

thin film over a wide spectral range from soft x rays to microwaves For the second edition Dr Ward has updated the book throughout In particular sections have been added on the optical properties of the sulphides selenides and tellurides of cadmium zinc and lead Two other new sections deal with low dimensional structures an important and relatively recent development area and the sensitivities of different methods for measuring  $\epsilon_1$  and  $\epsilon_2$  A new Appendix giving tabulated values of optical constants for a large number of elements insulators and semiconductors at two common laser wavelengths completes the second edition The author Leslie Ward has worked in the field of optical materials for about thirty years He is the author of some 40 research publications and co author of a book on the theory and practice of high vacuum technology From 1967 to 1982 he was Head of the Department of Applied Physics and is currently an Honorary Research Fellow at Coventry University
