Introduction to Marine Micropaleontology B.U. Haq, A. Boersma, 1998-03-12 This beautifully illustrated text book with state of the art illustrations is useful not only for an introduction to the subject but also for the application of marine microfossils in paleoceanographic paleoenvironmental and biostratigraphic analyses The recent revival of interest in marine micropaleontology worldwide in the wake of the development of sequence stratigraphic models has led to the decision to

reissue the volume in its original but paperback form The ideas expressed in various chapters of this second edition remain as valid today as they were when the book was first issued The text however includes an updated Phanerozoic geologic time which has been considerably modified since the 1980s      *The Embryology of Angiosperms, 6th Edition* Bhojwani S.S/Bhatnagar S.P. & Dantu P.K.,2015 For the last 40 years this book has served well the students of Botany Agriculture and Forestry for their regular courses like BSc General and Hons and MSc as well as competitive examinations It has stood the test of time due to the authors zeal to update it regularly with inputs from latest developments in the field Since the last revision of the book the methods used to study plant embryology have changed radically Powerful modern biological techniques are now being applied to understand the developmental aspects and genetic and molecular bases of embryological processes It has become possible to generate tissue specific mutants by T DNA insertional mutagenesis use of green fluorescent protein probes for live imaging of growing cells and tissues and to analyze gene expression in few celled structures such as early stages of embryo and constituent cells of the male and female gametophytes These techniques combined with the development of high resolution confocal laser scanning microscopy have provided non invasive methods to view live processes such as pollen tube growth in the pistil and double fertilization under in situ conditions The book has been translated into Japanese and Korean languages KEY FEATURES Well established text with content rigorous enough for both UG and PG studies Covers important topics like development and structure of male and female gametophytes pollination fertilization sexual incompatibility development of endosperm and embryo polyembryony apomixis and seed development Describes embryology in relation to taxonomy and experimental and applied embryology Use of tables and figures to depict important data and information Updated as per the new developments in the study of plant embryology      *Reproductive Ecology of Flowering Plants: A Manual* K.R. Shivanna,Rajesh Tandon,2014-09-01 Successful reproduction is the basis not only for the stability of the species in their natural habitat but also for productivity of our crop plants Therefore knowledge on reproductive ecology of wild and cultivated plants is important for effective management of our dwindling biodiversity and for the sustainability and improvement of the yield in crop species Conservation and management of our plant diversity is going to be a major challenge in the coming decades particularly in the tropical countries which are rich in biodiversity Reproductive failure is the main driver for pushing a large number of tropical species to vulnerable category Available data on reproductive ecology on tropical species is very limited and there is an urgent need to initiate research on these lines A major limitation for the beginners to take up research is the absence of simple concise work manuals that provide step wise procedures to study all aspects of reproductive ecology The Manual fills this void Over 60 protocols described in the manual cover the whole spectrum of reproductive ecology study sites and species phenology floral morphology and sexuality pollen and pistil biology pollination ecology breeding system seed biology seed dispersal and seedling recruitment Each chapter gives a concise conceptual account of the topic before describing the protocols The Manual caters to researchers teachers

and students who are interested in any aspect of reproductive ecology of flowering plants botanists ecologists agri
