Handbook Of Pain And Aging:

Handbook of Pain and Aging David I. Mostofsky, Jacob Lomranz, 2014-01-15 Handbook of Pain and Aging David I. Mostofsky, Jacob Lomranz, 2013-11-11 From time to time professional journals and edited volumes devote some of their pages to considerations of pain and aging as they occur among the aged in different cultures and populations One starts from several reasonable assumptions among them that aging per se is not a disease process yet the risk and frequency of disease processes increase with ongoing years The physical body's functioning and ability to restore all forms of damage and insult slow down the immune system becomes compromised and the slow growing pathologies reach their critical mass in the later years The psychological body also becomes weaker with unfulfilled promises and expectations and with tragedies that visit individuals and families and the prospect that whatever worlds remain to be conquered will most certainly not be met with success in the rapidly passing days and years that can only culminate in death Despair and depression coupled with infirmity and sensory and or motor inefficiency aggravate both the threshold and the tolerance for discomfort and synergistically collaborate to perpetuate a vicious cycle in which the one may mask the other Although the clinician is armed with the latest advances in medicine and pharmacology significant improvement continues to elude her or him The geriatric specialist all too familiar with such realities usually can offer little else than a hortative to learn to live with it but the powers and effectiveness of learning itself have declined *Handbook of Pain Relief in Older Adults* F. Block, Ephrem Fernandez, Edwin Kremer, 2013-05-13 Pain syndromes involve a complex interaction of medical and psychological factors In each syndrome unique physiological mechanisms are mediated by emotional states personality traits and environmental pressures to determine the nature and extent of pain complaints and pain related disability The Handbook addresses the complexities of chronic pain in three ways Section I describes general concerns that cross cut the different syndromes such as the use of narcotic pain medications the detection of deception and malingering and the epidemiology of pain Section II presents comprehensive reviews of a wide range of pain syndromes Each covers basic pathophysiology psychological factors found to influence the course of the syndrome and syndrome specific multidisciplinary treatment approaches Most of the Section II chapters are coauthored by psychologists and physicians Section III discusses pain in special populations including the elderly and children The Handbook is the most up to date comprehensive and integrated
