

- By 1990 The two federal agencies, the U.S. Geological Survey and the National Oceanic and Atmospheric Administration, planned to complete swath mapping and assessment of the living and nonliving resources of the U.S.EEZ.
 - It is not finished.
- In 1982 the new **Law of the Sea Convention (LOSC)** was written by the United Nations
 - acknowledged the 12 mile territorial sea, making provisions for international straits and allows for 200 mile EEZ.
 - All waters beyond the EEZ's of nations are the High Seas and the seabed and subsoil beneath are called "the Area".
 - LOSC proposes that the U.N. administer the High Seas and the Area and that all nations share their ocean technologies and the wealth obtained from those technologies.

Eez Resources Technology Assessment:

Ocean Resources D.A. Ardu, M.A. Champ, 2012-12-06 Today western nations consume annually only a small percentage of their resources from the sea despite the proclamation of Exclusive Economic Zones EEZ by many In contrast most Pacific Basin Countries obtain more than a quarter of their annual needs from the ocean Determination of greater rewards from the development of marine resources is markedly inhibited by the limited technical abilities available to locate and assess them Knowledge of Exclusive Economic Zone resources is schematic and generalised and a detailed understanding of the geology and processes relating to the economic use of the seafloor is both fragmentary and very basic Technology for mapping the mineral resources of continental shelves and ocean areas except in active offshore hydrocarbon provinces has been largely developed in pursuit of scientific objectives and competence to rapidly appraise economic potential is limited Similarly the capability to characterise and evaluate the other resources of the seas is rudimentary The development of ocean resources will become increasingly urgent as the growth of the world population and the depletion of land reserves combine to enhance demand Also increasing environmental constraints will limit the availability of traditional land based resources nevertheless new offshore development must proceed in a manner whereby the marine environment is not plundered but protected and conserved The challenge to develop ocean resources with responsible environmental stewardship will require greater leadership than the development of the technologies of exploitation
