**Innovation And Entrepreneurship: Choice And Challenge** Otto Chui Chau Lin, 2018-02-26

This book discusses practical issues of innovation and entrepreneurship. It first outlines the basic factors contributing to economic growth in the knowledge-based economy. Portraying wealth creation as taking scientific research results from lab to market, it identifies two interlinking components of the innovation process: turning scientific research to industrial technology and nurturing an eco-system conducive to technology business. Thus, it clarifies the position and role of four institutional players of the national innovation system: university, U, technology institute, T, government, G, and business, B. Making these players interact synergistically provides a fertile environment for innovation and entrepreneurship. The development of Silicon Valley, Hsinchu, Shenzhen, and Singapore are illustrated as examples. For the technology entrepreneur, having a novel technology or unique product does not guarantee commercial success. It requires an effective business model, ability to execute business plan, and entrepreneurial culture, all related to the soft power attributes of the entrepreneur team. The competitiveness of innovation and management of entrepreneurship are analyzed based on the concepts of Laozi and Confucius. Every entrepreneurship must learn to manage the challenges brought about by the changing business environment. The competitiveness and sustainability of a business is reflected by its ability to manage the change, both in bad and in good times. Every choice it makes will bring about new challenge. This is a definite, continuous and cyclic phenomenon occurring to all types of business. Some case examples of success or failure in managing challenges are given. They include Alibaba Group, Ardentec, IC testing, Cisco Systems, Delta Electronics, Eastman Kodak, Epistar, HBLED, Fairchild Semiconductors, General

Motors GIANT carbon fiber bicycles Tencent Holdings TSMC Volkswagen and others This book is based on the author's practice and observation in technology and economic development especially in the Asia Pacific region during the post 1990s period It is intended to be a reference of best practices for entrepreneurs corporations and countries striving to make its mark in the knowledge based economy Electric Choices Andrew N. Kleit, 2007 The electricity industry one of the largest and most vital sectors of the U S economy has changed dramatically in recent years After being heavily regulated for more than a century by authorities at all levels deregulation is taking center stage allowing for enormous efficiency gains Electric Choices explores the difficult questions surrounding deregulation and urges Americans to continue the transition to a market based model Energy Efficiency: Challenges and Opportunities for Electric Utilities , **Competitive Change in the Electric Power Industry** United States.
